Subject: Source Material License No. SUB-831

Dear Mr. Harmon:

Confirming our telephone conversation of December 3, 1969, please amend our Source Material License No. SUB-831 as follows:

- 1. Increase the maximum quantity of source material which we may possess from 200 pounds to 500 pounds.
 - a) The primary reason for this increase will be due to the change in the procurement policy. A significant dollar savings can be realized if we order in larger lots and store the material in our facilities.
 - b) The scope of the work with this material will not be significantly altered.
- 2. Personnel monitoring devices will be supplied by Eberline Instrument Corporation, or by an equivalent company providing such service. All personnel, as required in 10CFR20, will be monitored.

Please do not hesitate to contact me if you have any questions regarding these amendments.

Sincerely yours,

Jordan S. Davis, Secretary Ionizing Radiation Advisory Group General Electric Company - RESD P.O. Box 7722, Room 1088 - MB Philadelphia, Pa. 19101 (215) 823-3745/6
