Maria

There are several things I owe you for insertion into the VY SER. I have a three small changes which is not worth the gas of driving to the Legin office, thus this e-mail.

- 1) In Section 3.3.2.3.25 (Feedwater.....), I had a space holder for TLAA-metal fatigue. Delete that line. There will be no additional information added to this section
- 2) In Section 3.3.2.3.64 (Main Steam.....), I had a space holder for TLAA-metal fatigue. Delete that line. There will be no additional information added to this section
- 3) In Section 3.3.2.3.60 (Extraction Steam....), insert the following two paragraphs immediately after the section number and title:

**In Section In LRA Table 3.3.2-13-48, the applicant proposed to manage cracking due to fatigue for stainless steel expansion joints exposed to steam or treated water greater than 270°F using metal fatigue TLAA.**

**The staff reviewed the applicant's metal fatigue TLAA for non-Class 1 components and its evaluation is documented in SER Section 4.3.2. The staff finds that the number of thermal cycles for non-Class 1 (ANSI B31.1 Code) piping and components is less than 7000 cycles for 60-years of operation. Therefore, the TLAA for non-Class 1 piping and components remains valid for the period of extended operation in compliance with 10 CFR 54.21(c)(i).**

**Mail Envelope Properties** (46FA7360.140 : 12 : 35182)
