I will let you know of any significant news ASAP - right now it is the same OMB/DOJ review - the issues have not changed it is really about 350 mrem as the final dose limit.

The only substantive item is what is general public knowledge - that Boxer and Clinton are suggesting they will conduct a hearing on the Standard after Congress returns from summer recess - that has been in the news so I assume you know this - that is where I learned it.

I got asked again today here about status of Part 63

Is there any new news - last I knew, OMB/DOJ was still looking at EPA's rule. What are their general issues?
