THRU: ROMcClintock, Senior Radiation Specialist

SUBJECT: GE, Valley Forge Space Center, King of Prussia, Pa

LICENSE NOS: SNM-1199, SNM-1299, SMB-1005, 37-02006-05

FROM: WD Allen, Radiation Specialist

Inspection of subject licensee on 8/30-31/73 revealed no major problems. Programs as a whole were well conducted by a new RSO struggling desperately to get his own systems in operation and in doing so is floundering in the wake of a notorious former RSO.

The program of active use is under the source material license utilizing Th-232 as a "carrier" in impact studies. Future inspections at the facility should concentrate in this area with emphasis on contamination control and room exhaust filtration.

Recommend that the broad license, -05, be reinspected in one year plus six months. The remaining licenses should be reinspected concurrently. → FEB 75
