I formally request that the Nuclear Regulatory Commission address the following environmental and public health issues in the Draft Environmental Impact Statement for the Indian Point nuclear power plant:

1: the impacts of a terrorist attack or large-scale accident at Indian Point on the Croton Reservoir, a drinking water supply for New York City and Westchester County residents; Entergy's security is grossly inadequate (a guard literally asleep on the job is but the latest in a long string of problems); Entergy has repeatedly failed to keep its promise to inform, in a timely manner, Westchester County of safety and environmental problems at the plant, thus limiting governmental response to environmental problems;

2: the impacts of Indian Point's once-through cooling system on the Hudson River fish populations - including entrainment, impingement, and thermal pollution - using the most current scientific studies;

3: the build-up of high-level radioactive waste at Indian Point and the ongoing radioactive leaks originating from at least two spent fuel pools;

4: the alternatives to Indian Point's nuclear power, using a combination of renewable energy (wind, solar, geothermal), conservation, and clean natural gas, as offered by the 2006 National Academy of Sciences report.

Sincerely,
Steve Fondiller
140 North Broadway, Apt.J4
Irvington, NY 10533
