I oppose a generic environmental impact statement for ISL uranium mining because it undermines the more protective processes proscribed in the National Environmental Protection Act (NEPA).

I have been working with many South Texans - public officials and citizens whose aquifers are contaminated from uranium mining in Goliad and Kleberg Counties. They are unable to drink their water and some have been advised by the EPA to seek medical help.

Uranium mining companies nonetheless want to mine more.

This is an abomination and a complete environmental impact statement per NEPA must be conducted on each proposed mining site.

Please hold a scoping hearing in Texas where we are also effected by ISL uranium mining.

Thank you, Donna Hoffman
