

NRC/GEH Followup Audit 10/25-26/2007 Agenda Items

Overview

PRA Quality

- Compliance with Standard
- QA Procedures

DATA

- Sources of revised data for initiating event frequency and component failures

Flooding Issues

- Explain the initiating events and SSCs involved for the first 50 cutsets in full power flooding analysis.
- Does the cutset report cover the flooding propagation from one area to another?
- Does the LTR NEDE-33386 show all the flooding zones? for example, the SF (Service Water Building Flooding Zone) was not in the report.

BiMAC

Status of test report

Level 1 AT-Power Sensitivity Studies - Chapter 11 (clarifications)

- SRV Study
- Passive component demand Study

Level 1 AT-Power Insights and Assumptions – Chapter 18 (clarifications)

Other

- View the miniature ABWR and ESBWR models if they are available.

RAIs

- Status of outstanding responses to Level 2 (Severe Accident) issues
New Level 2 (Severe Accident) RAIs
