

Mr. J. A. Scalice
Chief Nuclear Officer
and Executive Vice President
Tennessee Valley Authority
6A Lookout Place
1101 Market Street
Chattanooga, Tennessee 37402-2801

April 6, 1999

SUBJECT: EVALUATION OF RESPONSE TO GENERIC LETTER 96-06 FOR
WATTS BAR NUCLEAR PLANT UNIT 1 (TAC NO. M96884)

Dear Mr. Scalice:

The U.S. Nuclear Regulatory Commission staff has reviewed the submittals by Tennessee Valley Authority (TVA) regarding Generic Letter (GL) 96-06, "Assurance of Equipment Operability and Containment Integrity During Design Basis Accident Conditions." TVA's submittals include its initial response to the GL of January 28, 1997, the response of December 21, 1998 on the thermally induced pressurization of piping runs penetrating the containment, and the response of August 31, 1998 on waterhammer and two-phase flow issues. The NRC staff's evaluation of these issues, as provided in the enclosure, finds TVA's responses to be acceptable. Accordingly, the staff's review of this matter under TAC number M96884 is completed.

Sincerely,

Original signed by:
Robert E. Martin, Senior Project Manager, Section 2
Project Directorate II
Division of Licensing Project Management
Office of Nuclear Reactor Regulation
