Gentlemen:

In the Matter of ) Docket No. 50-390  
Tennessee Valley Authority )

WATTS BAR NUCLEAR PLANT (WBN) UNIT 1 - SPECIAL REPORT - CYCLE 1 ICE  
WEIGHING SURVEILLANCE DATA AND SUBLIMATION RATE (TAC NO. M94424)

The purpose of this letter is to provide NRC a special report of the first cycle ice weighing surveillance data and associated sublimation rates. This report also includes TVA's evaluation of that data as committed in TVA's letter dated June 3, 1996.

The WBN ice condenser baskets were initially filled with ice from December 1994 to January 1995. At the beginning of Cycle 1, November 9, 1995, the total ice weight was documented at 2,877,379 pounds. The first refueling outage began on September 6, 1997, 22 months after initial licensing. During this recent outage, 100% of the ice baskets were weighed and the total as-found weight of the ice bed at the end of Cycle 1 was 2,757,294 pounds. This resulted in a net decrease of 120,085 pounds of ice or 4.17% sublimation rate. This loss averages 61.8 pounds per basket.

The sublimation rate of each bay ranged from a minimum of 2.39% in Bay 12 to a maximum of 5.86% in Bay 1. The ice loss was primarily concentrated in baskets in Rows 1, 2, and 3 which are the inside rows closest to the crane wall. A total of 576 baskets were serviced during Cycle 1 refueling outage providing a net increase in ice bed weight of 68,670 pounds. The as-left average basket ice weights range from a minimum of 1436 pounds to a maximum of

PDR

NOV 05 1997

1472 pounds. Thus, the total ice bed weight at the beginning of Cycle 2 was 2,825,964 pounds of ice.

Enclosed are the data sheets from the ice weighing surveillance. This data includes a summary sheet of the "As-found Ice Weights," the ICEMAN data sheets that document the as-found ice weights, the ICEMAN data sheets that document the replenishment ice weights, and a summary sheet of the "As-left Ice Weights."

The sublimation rate of 4.17% for the first cycle of operation was significantly better than the conservative assumption of 12% documented in TVA's letter dated February 28, 1996. Due to the extended length of that cycle because of the power ascension testing, mid-cycle outage, and the reactor trips encountered, TVA expects the first cycle to be the worst cycle for sublimating. Accordingly, TVA expects the sublimation rate to decrease in the following outages.

If you should have any questions, please contact P. L. Pace at (423) 365-1824.

Sincerely,

J. A. Scalice
