Franklin, TN 37064

Dear Dr. Jackson,

Watts Bar has cost enough-Stop Watts Bar!

1. Because Tennessee Valley Authority, TVA, has spent **over \$8 billion constructing** Watts Bar Unit 1-making it one of the **most expensive** power plants in history!
2. Because Watts Bar Unit 1 is still in need of **costly repairs-over \$1 million a day** is being at Watts Bar-**before** it can be granted an operating license as a nuclear power plant!
3. Because loading fuel into Watts Bar Unit 1 will make the plant radioactive immediately adding **at least \$500,000 million** onto its pricetag to ratepayers!
4. Because the US General Accounting Office, a non-partisan research agency employed by Congress, has published a report showing that although 69% of TVA staggering **\$27 billion debt** is due to the costs of the nuclear program **only 14%** of the regions power comes from those nuclear power plants!
5. Because there are proposals in front of the TVA Board of Directors for **other energy sources** to meet the region's energy needs like **windpower** and **conservation** and **efficiency** that would employ **2-10 times** more people than Watts Bar at a fraction of the cost!
6. Because there are still **thousands** of **outstanding safety violations** alleged against Watts Bar Unit 1 by current and former plant workers!

A caring Tennessean,

Jenny Willoughby
