Dr. Andrew Murphy
U.S. Nuclear Regulatory Commission

Dr. Murphy,

Enclosed is a CD containing our April 5, 2004 results for Y6797, Evaluation of 2002 USGS National Seismic Hazard Assessment. This CD supercedes the previous versions we sent, although the hazard curve results are very similar to the NRC1 CD we sent last week, with the exception of sites Braidwood and LaSalle. The hazard curves and deaggregations on this CD were made using a 0.1 degree spacing for the seismicity grids. See the readme file for more information about the deaggregations.

Sincerely,

Arthur Frankel
