Andrew Murphy  
NRC

Andy,

Enclosed are 2 CD's containing the work we have done to date for Fiscal year 2005. The first CD contains a Word file report of the QA work we have completed on the hazard codes. The second CD contains a directory "Savedmc" which contains the seismicity grids and input files calculated using the corrected hazard codes. These files can be used in calculations of hazard at any site, without having to re-calculate the input files. The second CD also contains the revised fortran codes for the three codes that were modified after QA. Let me know if you have any questions.

Best Regards,

Art Frankel

A 10
