Scott Newberry
US Nuclear Regulatory Commission
Washington DC 20555

Dear Scott:

I recently became aware of the NRC's plans to prepare a supplement to the Watts Bar Nuclear Power Plant Environmental Impact Statement that was written in 1972 and last supplemented in 1978. I am aware that public scoping hearings are not a required part of an EIS supplement, but the NRC should hold a series of meetings about Watts Bar. Tennessee Valley residents have not been able to comment on Watts Bar since the 1970's and TVA has no public utility commission to which the public can address their concerns. If the NRC is serious about evaluating the environmental and socioeconomic impacts of Watts Bar, public hearings need to be a part of the process. I would appreciate a written response to this letter. Thank you for your time.

Sincerely,

Kirby Erdely
