Document_Title: Draft Environmental Impact Statement for an Early Site Permit (ESP) at the Vogtle Electric Generating Plant Site (NUREG-1872) Draft Report for Comment

Comments: The NRC has not done proper analysis of the impact new reactors at Plant Vogtle will have on our drinking water supplies down stream. Our water is provided by the Beaufort Jasper Water and Sewer Authority and comes from the Savannah River. Considering the current consumptive use of more than 40 millions gallons per day by the existing reactors, the acknowledged consumptive use of new reactors, the population growth down stream, the draught conditions we are currently facing and the potential for future draughts the NRC needs to perform a more comprehensive study of the water supply issue. Southern Company has not done an adequate job of encouraging customers to use conservation and energy efficiency strategies to preclude the need for these new reactors. Please examine the water supply issue more thoroughly.
