Director of Nuclear Reactor Regulation
Attention: Ms. E. Adensam, Chief
Licensing Branch No. 4
Division of Licensing
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Ms. Adensam:

In the Matter of the Application of) Docket Nos. 50-390
Tennessee Valley Authority) 50-391

Please refer to the Watts Bar Nuclear Plant (WBN) Safety Evaluation Report (NUREG-0847 dated June 1982) Section 13.5.2, "Operating and Maintenance Procedures" which incorporated the requirements of NUREG-0737 Item I.C.7 "NSSS Vendor Review of Procedures" as license condition No. 28.

By my letter to you dated September 14, 1981, TVA provided its response to NUREG-0737 Item I.C.7 for the WBN indicating that the WBN power ascension and emergency procedures would be reviewed by Westinghouse Electric Corporation (W) and that any required changes would be completed by fuel load.

This letter provides confirmation, as required by SER license condition 28, that the W review has been completed. The procedures which were reviewed are listed below:

- EOI-0 R3 Safety Injection
- EOI-1 R6 Loss of Reactor Coolant
- EOI-2 R4 Loss of Secondary Coolant
- EOI-3 R3 Steam Generator Tube Rupture
- EOI-13 R2 Anticipated Transient Without Scram
- GOI-1 R4 Plant Startup from Cold Shutdown to Hot Standby
- GOI-2 R5 Plant Startup from Hot Standby to Minimum Load

TVA has evaluated the W comments and appropriate revisions to the procedures will be made before unit 1 startup.
