UNITED STATES GOVERNMENT

### Memorandum

TENNESSEE VALLEY AUTHORITY

三部ト 82022と 255

To : Those listed

FROM : M. N. Sprouse, Manager of Engineering Design, W11A9 C-K

DATE : FER 2/1/1982 820304FU419

SUBJECT: ENGINEERING PROCEDURES (EPs) - TRAIMING AND UTILIZATION

Root Cause IV of the EN DES 1982 Action Plan for Quality Improvement identified a number of problems with implementation of the current EN DES Engineering Procedures (EP) system, and established objectives for improvement in this area. The objectives included:

- Establish a training program to ensure that individuals are knowledgeable of procedures that govern their work,
- Emphasize that line managers are accountable for implementation of procedures in their respective areas.
- 3. Develop and enforce a "use or change" policy, and
- 4. Implement a feedback mechanism for EP users.

The purpose of this memorandum is to provide guidance on how these objectives are to be accomplished.

By June 1, 1982, each branch and project within EN DES is to develop and implement an internal training program to address all EPs which govern their work. As a minimum the training program shall include (a) identification of those EPs which significantly affect the work of each section; (b) an initial training phase to ensure employees are knowledgeable of the content of these procedures; (c) provisions for ensuring that employees are informed of revisions to procedures which govern their work; and (d) verification (at least annually) that the training program is being implemented and updated to address new procedures. The program should emphasize that the firstline supervisor is responsible for providing technical training—including the use of governing procedures—to his or her employees, and for ensuring that work is performed in accordance with these procedures.

I recognize that many of the EN DES EPs are overly prescriptive and restrictive. However, the fact remains that these procedures are a cornerstone of the EN DES quality assurance program and <u>must</u> be followed. As you are aware, we are currently conducting a thorough evaluation of the overall EP system to determine if programmatic changes are necessary. Until that evaluation is completed, we must continue to fully support and implement our existing procedures. I want to emphasize to all EN DES employees that it is the policy of this division to perform our work in accordance with established procedures and to initiate changes to those procedures when changes are necessary. We must set and sustain a "use or change" attitude among our employees.

ENGINEERING PROCEDURES (EPs) - TRAINING AND UTILIZATION

EN DES-EP 1.01, "Preparation and Processing of EN DES Engineering Procedures" includes provisions for any EN DES organization to recommend changes to an EP by submitting its recommendation to the EN DES Manager. However, your feedback on this process has indicated that the time and effort necessary to change procedures has often been excessive.

In an attempt to improve on this process, Section 6.0 was added to EP 1.01 to provide for expediting revisions to EN DES-EPs. In addition, I am directing ESB to develop a program for designating an individual to serve as the lead EN DES contact for each procedure. This individual shall be responsible for providing clarification, when needed, to users of the procedure, and for timely implementation or resolution of proposed changes.

Please ensure that this memorandum is circulated to all employees.

#### **EVALUATION SHEET**

Rev.

- 1. Task Force Category 4 for Watts Bar Nuclear Plant Unit 1
- 2. Task Force Category Description and Related B&V Findings:

Failure to design/maintain design records for AFW system as specifically described in the FSAR: F118, F121, F303, F304, F305, F306, F309, F313, F502, F504, F511, F513.

- 3. Evaluation for Cause
  - A. Preliminary

The design control process was not closely linked to FSAR commitments.

B. Final - TVA personnel involved in the design process on Watts Bar were not (in all instances) aware of the statements in the FSAR that describe various aspects of the plant's design for which they were responsible. Subsequently, as the Watts Bar design (and concurrent design documentation) evolved, changes in TVA's design (both in design philosophy and physical layout) have not been uniformly reflected in the FSAR via amendments to the docketed description. This assessment is applicable to both funits at Watts Bar.

Task Force Concurrence

- 4. Evaluation for Generic Examples
  - A. Preliminary

Given the cause and the base of findings, the situation does not lend itself to a sample approach for bounding the problem to the AFW system.

B. Final - B&V findings in this category deal primarily with discrepancies in documentation (actual versus FSAR-described) on the civil engineering design aspects of the Watts Bar AFW system. However, the discrepancies do involve other engineering disciplines (besides civil) and are of a nature such that they could not be described as documentation problems associated only with the AFW system. Therefore, additional sampling of the FSAR statements would not provide an accurate assessment of the scope of discrepancies. This assessment is applicable to both units at Watts Bar.

Resp. Org. Holin 3/16/84 Task Force Concurrence

- 5. Licensing Basis Satisfaction
  - A. Preliminary

For all examples, licensing basis is not satisfied even though there may be no safety significance.

B. Final
Certain findings in this category-F303, F304, F305, F306, F309 and F313--(i.e.,
location of design documentation) would not impact the licensing basis for Watts
Bar. However, other findings--F118, F121, F502, F504, F511 and F513--which
involve the application of design/analysis techniques different from that
described in the FSAR do not appear to satisfy the plant's licensing basis. This
assessment is applicable to both units at Watts Bar.

Resp. Org. LAChi 3/16/84 Task Force Concurrence 3/19/84

- 6A. Identification and Evaluation of Ongoing Corrective Action for Completed Work
  - A. Preliminary
    Memoranda NEB 821116 265 and NEB 830117 256 represent a valid FSAR correction
    process relative to assignment of scope, responsibilities, and timeliness. The
    criteria for the actual review are not identified and therefore cannot be
    determined to be effective in finding and correcting problems similar to those
    identified by B&V. The plan also needs to provide for accountability below the
    branch chief level.
  - B. Final

See continuation sheet (page 7)

Resp. Org. LHChin 3/16/84 Task Force Concurrence 4/184

- 7A. Identification of Corrective Action for Completed Work
  - A. Preliminary

The plan in 6AA should be issued in one document with clear criteria for assessment with respect to either a date or revision level applicable.

B. Final

See continuation sheet (page 7)

TVA Task Force for Review of Black & Veatch Findings

### BLACK & VEATCH EVALUATION SHEET (Continuation Sheet)

\_\_\_\_\_\_\_\_\_\_

6A.

B. Criteria required for performing a formal review of existing FSAR material will be formally provided to the EN DES organizations responsible for validating the accuracy of this information. This criteria will be specific enough to identify discrepancies similar to the type found by Black and Veatch. Formal documentation of the review work will be required from the responsible organizations (RO); however, accountability below the branch chief/project manager level will not be required in the formal transmittal of new/revised FSAR material to the Nuclear Engineering Support Branch's Nuclear Licensing Section (NEB-NLS). Each RO will be responsible for the level of review/accountability for their particular FSAR sections. This assessment is applicable to both units at Watts Bar.

7A.

B. The memorandums referenced in section 6A will be superseded by the issuance of an EN DES special engineering procedure (SEP) which will identify (a) the current status (amendment no.) of the FSAR, (b) a division of responsibility (DOR) for reviewing particular FSAR sections to verify present information and/or update as required, (c) criteria to be utilized by the RO in performing this review, and (d) dates for (i) completion of the FSAR review (ii) submittal of formal verification of existing FSAR material accuracy and new/revised FSAR descriptions (reviewed and coordinated as rquired by EN DES-EP 2.01) to NEB-NLS, and (iii) submittal of all new/revised FSAR material received by NEB-NLS to POWER's Nuclear Licensing Staff. This assessment is applicable to both units at Watts Bar.

9A.

- B. The following actions taken or to be taken provide the additional assurance required that the FSAR will be more closely linked with the design control process:
  - 1. The DOR for FSAR section being developed as part of the EN DES-SEP discussed in section 7AB will serve to make affected EN DES personnel aware of their responsibility to keep the FSAR section(s) for which they are responsible up to date. The DOR will be maintained in a current status by NEB-NLS and updated as required to reflect changes in section responsibilities and/or organizational realignments.
  - 2. EN DES-EPs 2.01, 2.04, and 2.05 are being consolidated into one EP to clarify the FSAR preparation/revision process within EN DES. When the revised EP is issued, the affected EN DES organizations will be formally notified and concurrently requested to emphasize to their employees the importance of compliance with the procedure.
  - 3. EN DES-EP 4.02 has been revised to require (a) the preparation of data sheets which describe FSAR changes needed as a result of an engineering change notice (ECN) and (b) verification that all required FSAR changes have been sent to NEB-NLS prior to reporting by EN DES that all design work on an ECN has been completed.

This assessment is applicable to both units at Watts Bar.

SUBJECT: ASSESSMENT OF ADEQUACY OF CORRECTIVE ACTION FOR FUTURE WORK FOR BLACK AND VEATCH TASK FORCE CATEGORY 4

> For this category, the TVA task force for review of Black and Veatch findings determined that the condition was applicable to Watts Bar units 1 and 2 and that corrective action was required for completed and future work. QMS performed a surveillance in accordance with the attached scoping document to access the adequacy of corrective action implementation for completed and future work, as well as the effectiveness of corrective action for future work. The results of that surveillance, contained in the attached surveillance report, verified the adequacy of the work accomplished.

Based upon our assessment of category 4, we conclude that this category can be closed by signing and dating item 12A, "Verification of Effectiveness of Corrective Action for Figure Work."

Concerns: NO / es / / 'if yes, dentify below)
Results:

- I. Management Summary: The design processes evaluated are outlined in the attached surveillance scoping document and were determined to be in full compliance with requirements.
- II. Conclusions and Recommendations: Rased upon the results of this surveillance, the corrective action implemented for both the completed and future work is adequate, and the effectiveness of corrective action for future work was also adequate.

### fif. Details:

- A. Performed the following surveillance activities to verify corrective action implementation for completed work:
  - Verify that EN DES-SEP 83-05 (NEB 830818 552) describes EN DES responsibilities for performing a verification of the WBN FSAR to ensure accuracy.

Results: EN DES-SEP 83 05 describes EN DES responsibilities for performing verification of the WBN FSAR for accuracy, updated through amendment 48. Many of the sections of the FSAR listed for review in EN DES-SEP 83 05 were changed but were not implemented in amendment 48. This was not a problem in that the changes were inprocess and were implemented in later amendments 49, 50, 51, and 52.

2. Select and review four ECMs.

 $R\underline{esults}\colon$  The following ECNs were reviewed, and the following individuals were interviewed:

- ECN 1973 Jim Hutson certain loadings to power train board changed.
- ECNs 4479 and 4480 Dennis Lashley shutdown board room chiller package added.
- ECN 3798 Richard Freeman valve numbers and valves 62-98 and 62-99 changed from closed to open.

Continued:

The above ECNs were all a part of the implementation of the changes under SEP 83-05.

B. Performed the following surveillance activities to verify corrective action implementation for future work:

Review the division of responsibility document and verify that section supervisors are cognizant of their assigned FSAR responsibilities:

Results: Interviewed the following individuals and all are well aware of their responsibilities as related to maintaining the accuracy of the WBN FSAR:

Jim Ritts, NEB NLS Don Williams, NEB-NLS Bill Neely, CEB Joe Little, MEB L. E. Stanford, NEB

- C. Performed the following surveillance activities to assess the effectiveness of corrective action for future work:
  - Assess the effectiveness of the corrective action for two ECN packages which have FSAR revisions:

Based on the number of ECNs utilized to implement changes under SEP 83.05, expanded sample from one (1) to two (2).

Results: The following ECNs were reviewed, and the following individuals were interviewed:

- a. ECN 4516 Leo Klaes the value of supply fan rating was lowered.
- b. ECN 4766 David Leckie reduced loads in cabinets L1 and L2; changed tables 8.3-22 to 8.3-26 of FSAR.

Verify that input to FSAR revisions is same as actual FSAR content.

Results: After reviewing ECNs, reviewed amendemnt 52 to the WBM FSAR to verify that revision inputs agreed with the actual content of the FSAR.

 Verify that the revision process was in accordance with revised EN DES-EP 2.01.

Results: The WBN FSAR revision process is in accordance with EMDES EP 2.01 R6 and will be handled likewise in the future.

 Verify that data sheets were prepared for revisions and work on ECNs was in accordance with EN DES-EP 4.02.

Results: ECN data sheets were prepared where required in accordance with EN DES EP 4.02 R15.

 Verify that changes were sent to NER-NLS prior to reporting that all ECN work was complete.

Results: Review of selected ECNs indicates that this was done.

I. Verification of Corrective Action Implementation for Completed Work

Perform the following surveillance activity:

Verify that EN DES-SEP 83-05 (MEB 830818 852) describes EN DES responsibilities for performing a verification of the WBN FSAR to ensure accuracy.

II. Verification of Corrective Action Implementation for Future Work

Perform the following surveillance activity:

Review the division of responsibility document (DOR) maintained by NEB-NLS. Interview selected section supervisors to verify that they are cognizant of their assigned FSAR responsibilities.

III. Assessment of Effectiveness of Corrective Action for Future Work

Perform the following surveillance activity:

Assess the effectiveness of the corrective action for one ECM package which has FSAR revisions. Verify that selected input is the same as the actual FSAR content. Verify that the revision process was in accordance with the revised EP 2.01. Verify that data sheets were prepared and that the changes were sent to MEB-NLS prior to reporting by EM DES that all ECM work was completed per EP 4.02.

VERIFICATION OF INFORMATION PRESENTED IN FINAL SAFETY ANALYSIS REPORT FOR WATTS BAR NUCLEAR PLANT

EN DES-SEP 83-05

#### **ABBREVI**ATIONS

10CFR50 - Title 10 of the Code of Federal Regulations, Part 50 - Division of Engineering Design

EN DES - Final Safety Analysis Report PSAR

- Management and Engineering Data Systems MEDS - Nuclear Engineering Support Branch - Nuclear Licensing S cion (NEB) NEB

NEB-NLS - Nuclear Regulatory . mission MRC RESS - Nuclear Steam Supply System

- Office of Engineering Design and Construction - Office of Power OEDC

POWER

POWER-NLS - Nuclear Licensing Staff (POWER) - Special Engineering Procedure SEP

ER DES-SEP 83-05

#### 1.0 PURPOSE AND SCOPE

This SEP describes EN DES's responsibilities for performing a verification of the Watts Bar Final Safety Analysis Report (PSAR), updated through Amendment 48 to ensure that the description of the facility, the design bases, and the safety analysis presented in the FSAR accurately reflect the as-designed plant configuration at fuel loading and comply with applicable regulatory and safety requirements. This review is required in order to address potential NRC concerns on the accuracy of material presented in the Watts Bar FSAR as a result of findings identified during the Black & Veatch independent review.

#### 2.0 DEFINITIONS

- 2.1 <u>Lead Organization</u> The engineering support branch or design project which has primary responsibility for a specific FSAR section as designated in Attachment A.
- 2.2 <u>Support Organization</u> The engineering support branch or design project responsible for assisting the lead organization for a specific FSAR section.

#### Note

Attachment A lists the support organizations for many sections of the FSAR but is not intended to be all inclusive.

- 2.3 <u>Reviewer</u> -- Support organization(s), NEB-NLS, and other organizations as requested by the lead organization.
- 2.4 Final Safety Analysis Report (FSAR) A document prepared in accordance with Regulatory Guide 1.70, "Standard Format and Content of Safety Analysis Reports for Nuclear Power Plants," and submitted to the NRC in support of operating license applications. The FSAR describes the detailed design and configuration of the nuclear power plant at fuel loading and presents the evaluation and analysis necessary to conclude that the plant can be operated safely.

#### 3.0 ACCOUNTABILITY AND RECORDS

Each lead organization is responsible for the validity of the information in the FSAR section(s) as assigned in Attachment A.

Accountability below the branch chief/project manager level is left to the discretion of each organization. The branch chief/project manager's (or his designee's) signature on memorandums which either (1) declare that an FSAR section is correct as written or (2) transmit needed changes, will be treated by NE3-NLS as authorization to proceed accordingly. No further proof of coordination or concurrence by others will be obtained by Nuclear Engineering Support Branch's Nuclear Licensing Section (NE3-NLS). Each lead organization is responsible for assuring that any needed coordination or review is completed before transmittal to NEB-NLS. Each lead organization will be responsible for determining the need for, and maintaining any records of, the review and

coordination for each section for which the lead organization is responsible. Each lead organization is also responsible for performing the review and initiating any required changes in accordance with the schedule in Attachment B.

MEB-NLS will maintain a file of all documentation relative to the verification until the operating licenses for both units have been issued. All changes will be filed in Management and Engineering Data Systems (MEDS) Computer Indexed System (CIS) as a permanent record.

#### Note

FSAR sections designated with an asterisk in Attachment A were originally authored, in whole or in part, by Westinghouse. The lead organization for those sections should review that material for consistency with other TVA-prepared material and for obvious errors or known design changes which have been incorporated in the FSAR. (The lead organization for the review of Westinghouse-prepared text will not be held accountable as described above for the correctness of that information.)

4.0 PROCEDURE FOR PERFORMING A VERIFICATION OF THE FSAR AND DOCUMENTING COMPLETION OF THE VERIFICATION

#### Lead Organization

 Evaluates the need for assistance in verifying information in the section(s) of the FSAR for which they are responsible.

- 2. If assistance is not needed, proceeds to step 5.
- 3. If input, review, or other assistance is needed, coordinates with the appropriate support organization and specifically requests the needed information. (The degree of formality, traceability, or accountability associated with this coordination and assistance is left to the discretion of the lead organization.)

#### Support Organization

4. Assists the lead organization by providing the requested information needed to complete the review in a time frame which permits the lead organization to complete the review as scheduled.

## Lead Organization

- 5. Uses any source of information (including, but not limited to, design drawings, design criteria, design calculations, test results, equipment specifications, analyses, and information supplied by the support organizations) to verify the validity of the following information in each FSAR section as updated through Amendment 48.
  - a. Any assumptions presented in the FSAR are consistent with those used in the plant design.
  - b. Any quantitative values in the FSAR are correct.

EN DES-SEP 83-05

- c. Any functional descriptions are consistent with the operation of the plant and its equipment.
- d. Any physical descriptions accurately describe the current asdesigned plant.
- e. All references to other documents or other FSAR material are current and correct.
- f. All FSAR figures depict current revision of the appropriate TVA drawings.
- g. Conformance to all referenced codes, standards, regulatory guides, and general design criteria is accurately described.
- h. The FSAR conforms to Regulatory Guide 1.70, revision 0, for content and format.
- 6a. If all information in an FSAR section is verified as correct, documents this in a memorandum to the Chief Nuclear Engineer.
- 6b. If corrections are required, initiates the necessary changes as in section 5.0. Any errors which constitute a nonconforming condition must be documented and processed in accordance with EN DES-EP 1.26.

#### NEB-NLS

7. Maintains a file containing documentation that each FSAR section has been reviewed and is correct, or is correct with the noted FSAR text and/or figure changes and verification of transmittal of these changes to POWER-NLS. This file will be maintained until the operating licenses for both units have been received (all changes)

#### VERIFICATION OF INFORMATION PRESENTED IN FINAL SAFETY AMALTSIS REPORT FOR WATTS BAR NUCLEAR PLANT

EN DES-SEP 83-05

will be filed in MEDS-CIS as a permanent record). The results of the review will be documented by memorandum from the Chief Nuclear Engineer to the Manager of Engineering Design.

## 5.0 PROCEDURE FOR PROCESSING IDENTIFIED CHANGES

#### Lead Organization

 Coordinates the preparation of a draft within their organization and with the support organizations, if appropriate, to make the necessary changes. (The degree of formality, traceability, or accountability associated with this preparation and assistance is left to the discretion of the lead organization.)

## Support Organization

 Assists the lead organization by providing the requested information needed to make the necessary changes.

#### Lead Organization

3. Coordinates the review of the draft within their organization, the support organization, NEB-NLS, and all other EN DES organizations whose input could substantially affect the quality of the proposed material. (The degree of formality, traceability, or accountability associated with this coordination is left to the descretion of the lead organization.)

## VERIFICATION OF INFORMATION PRESENTED IN FINAL SAFETY AMALYSIS REPORT FOR WATTS BAR NUCLEAR PLANT

EN DES-SEP 83-05

#### Reviewers

 Review the draft for conformance to regulatory guides and for technical accuracy; submit any comments to the lead organization.

#### Lead Organization

 Resolves all comments; sends their coordinated draft, including drawings and/or figures pertaining to the text, by memorandum to the Chief Nuclear Engineer.

#### NEB

- Reviews the draft for licensability, format, completeness, consistency, and licensing commitments.
- Coordinates with the lead organization on any changes that affect the technical content of the report.
- 8. Processes any licensing commitments in accordance with EN DES-EP 2.07.
- Prepares a final draft for formal transmittal by memorandum to POWER-NLS.
- 10. Issues the transmittal memorandum for the final draft FSAR material which constitutes OEDC approval.

#### VERIFICATION OF INFORMATION PRESENTED IN FINAL SAFETY AMALYSIS REPORT FOR WATTS BAR NUCLEAR PLANT

EM DES-SEP 83-05

#### NEB-NLS

11. Resolves formally with the lead organization any substantive comments received on the final draft.

#### Note

NEB-NLS will retain any comment(s) for incorporation at a later date unless the comment(s) notes a significant technical error in the final draft that would compromise the licensability of the plant.

#### 6.0 ATTACHMENTS

SAFETY ANALYSIS REPORTS (AMENDMENTS AND REVISIONS) - Title: PREPARATION, REVIEW, AND APPROVAL

REVISION LOG

EN DES-EP 2.01

| Revision<br>No. | DESCRIPTION OF REVISION                                                                                                                                                                                                                                                                                                                                         | Date<br>Approved |
|-----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------|
| 5               | This general revision is a rewrite of the EP to combine information covered in EN DES-EPs 2.04 and 2.05 for scheduling, preparing, reviewing, approving, and revising PSARs, FSARs, and UFSARS. The combining of these EPs was a recommendation of the EN DES-EP Subcommittee. This revision responds to Audit P-82-6, Finding No. 3, and Audit D-83-6, Item 2. | 12/29/83         |
|                 |                                                                                                                                                                                                                                                                                                                                                                 | ·                |

PBB - Planning and Budget Branch

POWER - Office of Power

PRS - Preparation and Review Schedule

PSAR - Preliminary Safety Analysis Report

SAR - Safety Analysis Report

UFSAR - Updated Final Safety Analysis Report

#### 1.0 PURPOSE AND SCOPE

This engineering procedure (EP) describes the Office of Engineering Design and Construction (OEDC) responsibilities for scheduling, preparing, reviewing, approving, and revising Preliminary Safety Analysis Reports (PSARs), Final Safety Analysis Reports (FSARs), and Updated Final Safety Analysis Reports (UFSARs). It covers the methods used for determining when Safety Analysis Report (SAR) revisions are required due to modifications in the design and construction of a nuclear plant, both preoperating license and postoperating license. It covers determining when an amendment to the SAR for a nuclear plant is required, as specified in Title 10 of the Code of Federal Regulations, Part 50 (10CFRSO). It defines interface requirements between OEDC and the Nuclear Licensing Staff in the Office of Power (POWER).

#### 2.0 POLICY

It is TVA's policy to conform to the appropriate regulatory requirements to ensure that the safety review of a nuclear plant is valid as described in the SAR. The Nuclear Regulatory Commission (NRC) requires in 10CFR50.34 that the FSAR description of (1) the plant design, (2) the analyses, and (3) the evaluations which lead to the conclusion that the plant can be operated safely and accurately reflect the current design and construction status of the plant.

#### 3.0 DEFINITIONS

- 3.1 Internal Draft--SAR input material in the stages from original preparation through review by the preparing organization and others providing direct input through the resolution of comments by those organizations; and through the OEDC-wide review conducted by the Nuclear Engineering Support Branch, Nuclear Licensing Section (NEB-NLS), and the resolution of comments. Upon completion of these stages, the material becomes an external draft.
- 3.2 External Draft--SAR input material in which all OEDC review is complete, through the office-level review including POWER and the NSSS vendor (conducted by POWER's Nuclear Licensing Staff), and the resolution of comments. After this processing, the material becomes a final draft.

EN DES-EP 2.01

#### 3.0 DEFINITIONS (Continued)

- Final Draft--SAR input material in which the initial TVA-wide (including the NSSS vendor as appropriate) review and resolution of comments is complete; through the review and approval by NRC. After the initial TVA-wide/NSSS vendor review, the various office-level reviewers will not have seen each other's comments and a further review may be conducted by POWER's Nuclear Licensing Staff. The need for further review will depend on the gravity of the comments and the time available for review. If review is needed but time is not available, the material may be submitted to NRC, and a subsequent review by TVA may be conducted, with any necessary corrections being made in a subsequent amendment.
- Preparing Organization—In a broad sense, the office-level or NSSS vendor organizations which prepare designated portions of SARs; the organizations designated in the TVA—wide division of responsibilities (DORs). In the more restricted OEDC sense, the engineering support branches which have primary responsibility for preparing SAR material assigned to OEDC. POWER'S Nuclear Licensing Staff has the final authority in assigning preparing organizations at the office/NSSS level. NEB-NLS has the final authority in assigning preparing organizations within OEDC, and may itself prepare FSAR material as required.
- 3.5 Preliminary Safety Analysis Report (PSAR)--A document prepared in accordance with 10CFR50.34 and submitted to the NRC as part of the application for a construction permit. The PSAR describes the conceptual design and construction of the nuclear power plant and presents the evaluations and analyses to demonstrate its safety.
- Final Safety Analysis Report (FSAR)—A document prepared in accordance with 10CFR50.34 and submitted to the NRC in support of the operating licensing application. The FSAR describes in detail the final design and the actual construction of the nuclear power plant and presents the evaluation and analysis necessary to conclude that the plant can be operated safely. It should be noted that the information in the FSAR reflects TVA's commitments to NRC as defined by the applicable regulatory requirements and the appropriate design inputs developed by TVA. The FSAR does not meet the requirements of Regulatory Guide 1.64 concerning design verification and independent review.
- 3.7 Updated Final Safety Analysis Report (UFSAR)--The FSARs for nuclear plants with operating licenses are updated in accordance with regulation 10CFR50.71(e).

EN DES-EP 2.01

#### 3.0 DEFINITIONS (Continued)

- 3.8 SAR Preparation and Review Schedule (PRS)—The schedule for preparation and review of SARs and amendments thereto. It includes a DOR and a schedule, and establishes the following:
  - a. The office level DOR for preparation and review of all portions of the SAR or SAR amendment.
  - b. The OEDC DOR for preparation and review of the SAR or SAR amendment.
  - c. The support organizations for the applicable portions of the SAR or SAR amendment.
  - d. The schedules for all of the above (a, b, and c) within OEDC and TVA wide including schedules for all drafts, reviews, and redrafting.
- 3.9 Unreviewed Safety Question--Defined in 10CFR50.59 and  $\overline{\text{EN DES-EP}}$  2.03.
- 3.10 Amendment--A change or addition to an SAR which is submitted to the NRC. Amendments to PSARs and FSARs are compiled by POWER's Nuclear Licensing Staff from revisions initiated by OEDC, POWER, other TVA offices, and/or the NSSS vendor. Amendments to UFSARs are initiated by annual updates after the UFSAR is issued. Each amendment is assigned a sequential number in the order in which it is submitted to the NRC.
- 3.11 Revision—Any specific addition to or change in an SAR. Several or many revisions normally make up an amendment. Revisions to PSARs and FSARs can be initiated by: (a) NRC information requests or position statements, (b) any knowledgeable person in any TVA organization, and (c) the NSSS vendor. Revisions initiated by OEDC, POWER, and others may be combined into an amendment by POWER's Nuclear Licensing Staff for submittal to NRC.

EN DES-EP 2.01

## 4.0 PREPARATION, REVIEW, AND APPROVAL OF SAFETY ANALYSIS REPORTS

4.1 SAR Preparation and Review Schedule (PRS)

#### NEB (Nuclear Licensing Section)

- Establishes, maintains, and issues a DOR for PSAR, FSAR, UFSAR, and amendment preparation; updates and issues the DOR on an as-needed basis, but at least annually.
- Coordinates the submittal schedule for each PSAR and FSAR based on the plant construction schedule with POWER's Nuclear Licensing Staff; develops the schedules for UFSAR submittals which are dictated by 10CFR50.71(e).
- Prepares the OEDC PRS and coordinates it with the affected organizations; issues the PRS to all OEDC organizations which are involved and to POWER's Nuclear Licensing Staff.

#### 4.2 Preparation and Review of OEDC Prepared SAR Material

#### Preparing Organization

- Coordinates preparation of an internal draft of assigned sections of the SAR, including drawings, figures, and tables as follows:
  - a. PSAR Drafts--Reflect plant conceptual design.
  - FSAR Drafts--Reflect in detail the final design and incorporate responses to PSAR questions in the text.
  - c. <u>UFSARs</u>—Reflect the current plant as-constructed status no more than 6 months before UFSAR submittal and cover only design changes installed as of the cutoff date. The UFSAR text incorporates all responses to questions and all amendment material submitted to NRC after the FSAR was published. The first update on a given plant has no revision or amendment number and no revision markings to indicate text changes. Subsequent annual updates will consist of changed pages and will have sequential amendment numbers. Revisions to the previous issue will be noted by margin revision bars.

Issued design drawings may be placed in the PSAR/FSAR without review; but unissued drawings, figures, and tables must be handled in the same manner as SAR text.

EN DES-EP 2.01

- 4.0 PREPARATION, REVIEW, AND APPROVAL OF SAFETY ANALYSIS REPORTS (Continued)
  - 4.2 Preparation and Review of OEDC Prepared SAR Material (Continued)

## Preparing Organization (Continued)

Draft material must be in accordance with all applicable conformance Information Sheet commitments provided in controlled sets of regulatory guides.

- Coordinates review of the internal draft within the preparing organization (branch or project) and with the support organizations (branches or design projects) which provided draft input.
- Sends the coordinated internal draft including drawings and/or figures pertaining to the text to NEB-NLS; also includes documentation of the review (step 2 above) in the memo.
- 4. For FSARs, provides to NEB-NLS evidence that any design or analysis changes have been initiated and includes the number of the issued Engineering Change Notice (ECN), Design Input Memo (DIM), design criteria revision, procedure revision, contract changes, design calculations, etc. When impractical to obtain such evidence on a schedule consistent with submission of the FSAR material, includes a commitment tracking form in accordance with EN DES-EP 2.07.

#### NOTE

The design project ensures that SAR text revisions are sent to NEB-NLS before related ECNs are reported complete (ref. EN DES-EP 4.02). This does not change other requirements of EN DES-EP 2.07. (This note does not apply to UFSARs.)

#### NEB (Nuclear Licensing Section)

5. Formally sends internal drafts in accordance with the DOR by memo for review and comment to all OEDC organizations whose input could substantially affect the quality of the proposed material.

#### Reviewers of Internal Draft

 Review the internal draft for conformance to regulatory guidance and for technical accuracy, and submit comments to NEB-NLS.

- 4.0 PREPARATION, REVIEW, AND APPROVAL OF SAFETY ANALYSIS REPORTS (Continued)
  - 4.2 Preparation and Review of OEDC Prepared SAR Material (Continued)

#### NEB (Nuclear Licensing Section) (Continued)

- Reviews the internal draft for licensability, format, completeness, consistency, and licensing commitments.
- Processes any licensing commitments in accordance with EN DES-EP 2.07.
- Coordinates and develops an external draft incorporating or resolving all comments received during the scheduled review period.

#### NOTE

If comments are received after the due date, NEB-NLS will retain the comments unless a late comment notes a significant technical error in the draft that would compromise the licensability of the plant, or if inclusion of the comments does not affect the SAR submittal schedule.

- Prepares the external draft for formal transmittal by memo to POWER's Nuclear Licensing Staff.
- 11. States in the transmittal memo for final draft OEDC-prepared SAR material that OEDC considers the transmitted material "design input" (for licensing purposes) in accordance with the terms of ANSI N45.2.11, and that the material should not be changed in substance without prior written approval of NEB-NLS.

#### Chief Nuclear Engineer, NEB, or Designee

 Signs the transmittal memo which constitutes OEDC approval of final draft SAR material and/or comments.

#### NEB (Nuclear Licensing Section)

 Resolves informally with the preparing organization any comments received on the TVA-wide external draft review conducted by POWER's Nuclear Licensing Staff.

- 4.0 PREPARATION, REVIEW, AND APPROVAL OF SAFETY ANALYSIS REPORTS (Continued)
  - 4.3 Coordination of Non-OEDC-Prepared SAR Material

#### MEB (Nuclear Licensing Section)

- Receives information requests from POWER's Nuclear Licensing Staff for OEDC input to internal drafts being prepared by other TVA offices or the NSSS vendor; coordinates the request within OEDC to get the needed information; and sends the information by memo to POWER's Nuclear Licensing Staff.
- Receives external drafts of SAR material prepared outside OEDC from POWER's Nuclear Licensing Staff; sends these drafts by memo for review, in accordance with established DORs, by OEDC organizations.

#### Reviewers of External Drafts

 Review external drafts for technical accuracy and conformance to regulatory guidance; send their comments to NEB-NLS.

#### NEB (Nuclear Licensing Section)

- Reviews the drafts for licensability, format, completeness, and consistency.
- Coordinates and compiles all comments of the drafts and prepares them for formal transmittal by memo to POWER's Nuclear Licensing Staff for resolution.

#### NOTE

If comments are received after the due date and after comment transmittal to POWER's Nuclear Licensing Staff, NEB-NLS will retain the comments unless a late comment notes a significant technical error in the draft that would compromise the licensability of the plant, or if inclusion of the comments does not affect the SAR submittal schedule.

6. States in the transmittal memo that OEDC considers the transmitted material "design input" (for licensing purposes) in accordance with the terms of ANSI N45.2.11 and that the material should not be changed in substance without prior written approval of NEB-NLS.

- 4.0 PREPARATION, REVIEW, AND APPROVAL OF SAFETY ANALYSIS REPORTS (Continued)
  - 4.3 Coordination of Non-OEDC-Prepared SAR Material (Continued)

#### Chief Nuclear Engineer, NEB, or Designee

- Signs the transmittal memo which constitutes OEDC approval of SAR material and/or comments.
- 4.4 Records of SAR Preparation

#### Preparing Organizations

- Maintain records of SAR preparation within their organizations and any other organizations which supply draft input; also maintain records of reviews conducted by their organization or a support organization of internal and external drafts.
- May destroy records documenting PSAR preparation when the construction permit is obtained or the application is withdrawn.
- 3. May destroy records documenting FSAR preparation after the operating license is received.

#### NEB (Nuclear Licensing Section)

- Keeps records documenting internal and external OEDC preparation and review of SAR material.
- Keeps records documenting that the preparing organizations prepared or reviewed amendment material.
- Keeps records showing that OEDC comments on non-OEDCprepared material were sent to POWER's Nuclear Licensing Staff or were otherwise resolved.
- Maintains and issues a DOR for preparation and review of SAR material.

#### 4.5 Distribution of Controlled Sets of SAR Material

#### NEB (Nuclear Licensing Section)

- Formally conducts a survey of OEDC to determine the number of copies of PSARs, FSARs, and UFSARs needed in OEDC.
- Informs POWER's Nuclear Licensing Staff of the number of copies required by OEDC.

EN DES-EP 2.01

- 4.0 PREPARATION, REVIEW, AND APPROVAL OF SAFETY ANALYSIS REPORTS (Continued)
  - 4.5 Distribution of Controlled Sets of SAR Material (Continued)

## NEB (Nuclear Licensing Section) (Continued)

- Receives from POWER's Nuclear Licensing Staff copies of PSARs, FSARs, and UFSARs as they are issued to the NRC.
- Sends the distribution list and the copies of SAR material to the Engineering Services Branch (ESB), Procedures Control Section.

## ESB (Procedures Control Section)

 Distributes controlled copies of SAR material to those on the distribution list by memo from the EN DES Manager; includes a return receipt which will verify that the distributed material has been received and filed.

## Holders of Controlled Copies

File the SAR material upon receipt and sends the signed and dated return receipt to ESB's Document Control Center.

## ESB (Procedures Control Section)

- When all return receipts are received, sends the original transmittal memo and return receipt record to the Management and Engineering Data Systems (MEDS) Computer Indexed System (CIS).
- 5.0 PREPARATION, REVIEW, AND APPROVAL OF AMENDMENTS AND REVISIONS
  - 5.1 Initiation and Scheduling of Amendments and Revisions

POWER's Nuclear Licensing Staff determines when PSAR/FSAR amendments are required. OEDC (NEB-NLS) and other TVA offices may submit SAR revisions to POWER's Nuclear Licensing Staff at any time.

- 5.0 PREPARATION, REVIEW, AND APPROVAL OF AMENDMENTS AND REVISIONS (Continued)
  - 5.1 Initiation and Scheduling of Amendments and Revisions (Continued)

There are various sources for identifying changes which must be made in PSARs and FSARs to keep them current. These include:

- a. Responding to NRC questions which impact plant design.
- b. Reanalysis of various plant parameters and events due to revised bases or improved methods.
- c. Changes in TVA or NSSS vendor organization or procedures reflected in the FSAR.
- d. Changes in the plant design (i.e., ECNs and Field Change Requests [FCRs]).
- e. Revolution of Nonconformance Reports (NCRs), inspection report items, etc.

The FSARs for nuclear plants with an operating license (OL) are updated in accordance with 10CFR50.71(e). That regulation specifies that an original updated FSAR (UFSAR) must be filed with NRC within 2 years of the date of the OL. Subsequent amendments to the update must be made no less frequently than annually. (Note: TVA's policy is to submit amendments annually.) The updates are to reflect the status of the plant as of no more than six months before filing of the update.

The original FSAR is the legal licensing document; it will not be further revised, but will remain in the NRC docket file. The update is a separate new document which reflects the current plant status.

## 5.1.1 Amendments to PSARs and FSARs Initiated by NRC

## NEB (Nuclear Licensing Section)

- After receiving formal or draft NRC information requests or position statements, prepares a draft PRS.
- Informally coordinates review of the draft PRS with OEDC branches and staffs indicated in the DOR as preparing or reviewing SAR amendment material and with POWER's Nuclear Licensing Staff.
- 3. Resolves comments on the draft PRS.

EN DES-EP 2.01

- 5.0 PREPARATION, REVIEW, AND APPROVAL OF AMENDMENTS AND REVISIONS (Continued)
  - 5.1.1 Amendments to PSARs and FSARs Initiated by NRC (Continued)

## NEB (Nuclear Licensing Section) (Continued)

Writes the final PRS, which, along with NRC information requests or position statements, is sent from NEB-NLS to all affected OEDC organizations and POWER's Nuclear Licensing Staff.

#### Preparing Organization

5. Reviews each NRC request or position statement in detail within the preparing organization (branch or project) and with the support organizations (branches or projects) from which draft input may be required; immediately notifies NEB-NLS if clarification of NRC material is needed or to propose a new completion date if the response cannot be prepared by the scheduled submittal date. In the latter case, gives NEB-NLS an expected completion date.

## NEB (Nuclear Licensing Section)

- 6. Immediately notifies POWER's Nuclear Licensing Staff if clarification of NRC material is needed or to propose a new completion date if the response cannot be prepared by the scheduled submittai date.
- 5.1.2 Revisions to PSARs and FSARs Initiated by OEDC

#### Preparing Organizations

- Review changes in the plant's layout, design, and/or analyses to determine if the SAR will need revising to reflect the changes; similarly review organization changes.
- Notify NEB-NLS (formally or informally) of any changes that require SAR revisions and include specific references to text, tables, and/or figures.

#### NEB (Nuclear Licensing Section)

 Verifies and/or coordinates the need for proposed PSAR/FSAR revisions and notifies POWER's Nuclear Licensing Staff.

EN DES-EP 2.01

- 5.0 PREPARATION, REVIEW, AND APPROVAL OF AMENDMENTS AND REVISIONS (Continued)
  - 5.1.3 Revisions to UFSARs

## NEB (Nuclear Licensing Section)

Coordinates the scheduling of each UFSAR annual amendment with POWER's Nuclear Licensing Staff; sends the schedule requirements by memo to the preparing organizations which are involved.

- 5.2 Preparation of Amendments and Revisions
- 5.2.1 Revisions Initiated by NRC

NRC information requests on PSARs and FSARs are usually addressed in a separate volume of each SAR. The response for each request should take one of the following three forms, which are listed in order of preference:

- a. A specific reference to a section(s) of the SAR which contains the requested information or has been revised in response to the NRC request. This format is especially appropriate for material that should remain in the SAR permanently through the PSAR, FSAR, and UFSAR stages.
- b. A reference to original or revised SAR text material, with some amplifying statements.
- c. When a revision of SAR text is judged inappropriate, an independent response to the question should be provided in the question and response volume, together with supporting figures and tables. Responses inappropriate for the SAR text include those requiring a level of detail beyond that normally presented in SARs.

Amendments may include engineering reports which are submitted to the NRC as separate documents. In such cases, reference(s) to the reports must be made where necessary in the SARs.

## 5.2.2 Textual and/or Tabular Changes

## All OEDC Organizations

Provide NEB-NLS with any necessary textual and/or tabular revisions that are not identified in the ECN review.

SAFETY ANALYSIS REPORTS (AMENDMENTS AND REVISIONS) - PREPARATION, REVIEW, AND APPROVAL

EN DES-EP 2.01

- 5.0 PREPARATION, REVIEW, AND APPROVAL OF AMENDMENTS AND REVISIONS (Continued)
  - 5.2.3 Unreviewed Safety Questions (for OL Plants)

When a plant modification involves an unreviewed safety question (in accordance with EN DES-EP 2.03), NRC approval is required before the change is made. This is handled by submitting a license amendment request to the NRC describing the modification. The modification, after its completion in the field, will be described in the next FSAR update in accordance with subsection 5.1.

# 5.2.4 General Preparation

# Preparing Organization

- Coordinates the preparation of amendment material within the preparing organization (branch or project) and within the support organizations (branch or project) from which draft input may be required; follows requirements of subsection 4.2.
- Reviews design changes and revised drawings to determine if textual and/or tabular SAR changes will be required; makes text and tabular changes when required.
- Notes revisions to existing textual and tabular material in PSARs, FSARs, and UFSARs by vertical revision bars in the right margin.

#### NOTE

Design changes must be initiated before PSAR and FSAR drafts are submitted. Design changes reflected in FSAR revisions for construction permit (CP) plant must be implemented before the plant becomes operational. All FSAR changes (text and drawing changes) need to be submitted as an integrated package so that the NRC can review the FSAR text changes with the changes to the FSAR figures. For UFSAR revisions, the design and installation of a plant modification must be completed at least 6 months before the change is included in a scheduled UFSAR revision.

 Sends completed work to NEB-NLS for further processing in accordance with subsection 4.2.

- 5.0 PREPARATION, REVIEW, AND APPROVAL OF AMENDMENTS AND REVISIONS (Continued)
  - 5.2.4 General Preparation (Continued)

Preparing Organization (Continued)

#### NOTE

The preparing organization includes evidence with the amendment material (except for UFSAR revisions) that any design or analysis changes have been initiated. This evidence might include the number of the issued ECN, DIM, design criteria revision, procedure revision, contract change, design calculation, etc. If it is impossible to obtain such evidence on a schedule consistent with that for submission of the amendment material, a commitment tracking form is included in accordance with EN DES-EP 2.07.

Design projects must ensure that SAR text revisions are sent to NEB-NLS for issue before related ECNs are reported complete. (This does not apply to UFSAR revisions.)

# 5.2.5 Revisions Initiated by TVA

# NEB (Nuclear Licensing Section)

- Reviews revisions proposed by OEDC personnel (see 3a. and 3b. below).
- Serves as OEDC coordinator for revisions initiated by the NSSS vendor or by non-OEDC TVA organizations; distributes this material in accordance with the DOR for OEDC review.
- 3a. If a proposed revision involves only editorial changes, typographical corrections, or changes directly resulting from new or revised issued design documents, NEB-NLS provides the changes formally to POWER's Nuclear Licensing Staff for inclusion in a scheduled amendment.
- 3b. If a proposed revision involves significant technical changes to the SAR, NEB-NLS follows the requirements of subsection 4.2 for preparation, review, and approval.

# SAFETY AMALYSIS REPORTS (AMENDMENTS AND REVISIONS) - PREPARATION, REVIEW, AND APPROVAL

EN DES-EP 2.01

- 5.0 PREPARATION, REVIEW, AND APPROVAL OF AMENDMENTS AND REVISIONS (Continued)
  - 5.2.6 Check on Proper Drawing Revisions

# NEB (Nuclear Licensing Section)

- Compiles a drawing information system (DIS) comparison list of all TVA drawings included in the FSAR during its preparation or shortly after its submittal to the NRC; includes in this list the figure revision currently in the FSAR and the latest revision of the drawing.
- Periodically receives from the Planning and Budget Branch (PBB) a computer listing of the status of all TVA figures on each specific plant.
- Compares the PBB computer listing with the DIS comparison list of TVA drawings to determine if any TVA FSAR figures have been revised.
- 4. Keeps the DIS comparison list current with the computer listings by adding the most recent revision of each particular drawing. Compares the most recent drawing revisions with the respective SAR figures to determine whether SAR text and/or figure changes are needed. The latest drawing revisions are normally incorporated into the SAR, but need not be in cases where minor detail changes do not affect the SAR level of detail.

The SAR figures may show plant design advanced beyond the actual plant status. This is acceptable even at the time of OL, since at that time the actual plant status is reflected in the open work item list, in the unimplemented design item evaluations, and in the plant safety evaluation report.

 Coordinates the proposed figure changes with the EN DES organization responsible for the FSAR section(s) affected by the revisions.

#### 5.2.7 Amendments to UFSARs

# NEB (Nuclear Licensing Section)

 Accumulates a file of correspondence, ECN logs, etc., for each OL plant to aid in identifying material to be included in the next annual UFSAR amendment; reviews material to determine what sections are affected by the material.

- 5.0 PREPARATION, REVIEW, AND APPROVAL OF AMENDMENTS AND REVISIONS (Continued)
  - 5.2.7 Amendments to UFSARs (Continued)

# Preparin ganization and NEB (Nuclear Licensing Section)

 Review all ECNs in accordance with EN DES-EP 4.02 before approval to determine if the changes should be included in a future UFSAR amendment.

# Design Project

 As part of the standard distribution, sends an information copy of all issued ECNs to POWER's Nuclear Licensing Staff relative to an UFSAR revision.

# Division of Nuclear Power

- 4. Prepares "as constructed" drawings by the configuration drawing control program described in EN DES-EP 4.16.
- Sends the revised "as constructed" drawings to the design project.

### Design Project

- Has the drawing reproduced and distributes copies of the drawings within OEDC.
- 7. Sends revised FSAR figures to NEB-NLS.

# NEB (Nuclear Licensing Section)

- 8. Coordinates with the Division of Nuclear Power in the determination of which ECNs will cover work completed by the cutoff date, which is 6 months prior to submittal of the amendment. Informs preparing organizations of this and of any other information which will aid in determining the changes to be covered in the UFSAR amendment.
- Provides the preparing organization as determined by the DOR with a copy of all material affecting UFSAR text; identifies to the extent possible the UFSAR sections affected.

SAFETY ANALYSIS REPORTS (AMENDMENTS AND REVISIONS) - PREPARATION, REVIEW, AND APPROVAL

EN DES-EP 2.01

- 5.0 PREPARATION, REVIEW, AND APPROVAL OF AMENDMENTS AND REVISIONS (Continued)
  - 5.3 Review, Approval, and Records of Revision Material

Revision material prepared by OEDC is reviewed as described in subsection  $4.2.\,$ 

#### EXCEPTION

When the schedule for preparing revision material does not allow enough time for technical review, the preparing organization sends the material to NEB-NLS without completing the technical review. NEB-NLS sends unreviewed material to POWER's Nuclear Licensing Staff, noting its unreviewed status, for submittal to the NRC. The revision is reviewed after it is submitted to the NRC.

Amendment material that is prepared outside OEDC is reviewed as described in subsection 4.3.

Revision material is approved as described in subsections 4.2 and 4.3.

Records are documented as described in subsection 4.4.

# 1.0 PURPOSE

This procedure describes how the Engineering Change Notice (ECN) is initiated and processed before licensing and assigns responsibilities for its handling. The ECN is intended to provide EN DES and the Division of Construction (CONST) with a concise scope of a design change in a timely manner. It is not intended to be used as a substitute for routine communication and/or coordination within EN DES or with CONST. The ECN is a Quality Assurance (QA) record.

#### NOTE

After issuance of the Operating License (OL), ECNs are handled as in EN DES-EP 4.52.

# 2.0 SCOPE

The procedure defines the method to be used by angineering and architectural support branches, Nuclear Projects Design (NPD) projects, and Special Design Projects (SDP) to process design changes on nuclear plant drawings, including design criteria drawings, for which EN DES has full responsibility.

The procedure becomes effective for a project/plant when the Limited Work Authorization is issued. From that date, the procedure applies to all design changes initiated within EN DES after the original drawing issue (RO) and to modifications requested by CONST. This procedure also applies to new drawings which are required to accomplish nuclear plant design changes.

# 3.0 ECN FORMS: TITLE AND FUNCTIONS

- 3.1 ECN Cover Sheet (TVA 10575C) -- A form used to identify the ECN, show the initiator of the ECN, list the organizations involved with the ECN, and document the approval of the ECN. {See Figures 1 (10575C) and 2 (Key for Figure 1).} The scope section is used to show the project, affected units, and the system or feature affected by the change. The scope includes a brief description of and reason for the change and any applicable references. The description of the change should be stated concisely and in terms of the objective to be obtained.
- 3.2 ECN Cover Sheet Attachments (TVA 10575G, 10575H)--Sheets used for text or graphics to support the SCOPE section of the L-ECN or P-ECN cover sheet. [See Figures 3 (10575G), and 4 (10575H).]

# 3.0 ECN FORMS: TITLE AND FUNCTIONS (Continued)

- 3.3 ECN Data Sheet (TVA 10575A)—A sheet that shows the scope of a design section's work required for the ECN. The data sheet has a list of drawings and/or bills of material and/or FSAR text revisions to be revised or issued for the ECN. (See Figures 5, 6, and 7.)
- 3.4 ECN Data Sheet (TVA 10575E) -- A sheet used to continue the listing of drawings and/or bills of materials and/or FSAR text revisions from the first data sheet. (See Figure 6.)
- 3.5 ECN Closure Sheet (TVA 10575B)—A form used to notify CONST and other interested groups within TVA that no additional design drawings will be issued or requisitions released for the ECN being closed. (See Figure 8.)

# 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE

4.1 Initial Submittal and Issue of ECN

# 4.1.1 Initiating ECN

When the standard ECN SI (see subsection 4.6) does not apply, approval of the change as in EN DES-EP 4.40 may be required. For plants under construction, Impact Justification (IJ) analysis is required for changes that significantly affect the scope or a schedule milestone or result in estimated total monetary increases, including the confidence factor, of more than \$500,000. Twelve months before the scheduled probable fuel loading of a unit, an IJ analysis is required for engineering changes that need additional cost or schedule information to proceed with the proposed change.

discipline sections

If the proposed change is identified by a suppost branch or SDP and an IJ analysis is not required, the suppost branch or SDP1 netities

discipline character prending information as needed) defining any change to design.

# NOTE

All correspondence about the ECN whether TVA- or vendor-originated must be traceable to the ECN and be recorded in the Management and Engineering Data Systems (MEDS) Computer Indexed System (CIS) (ref. EN DES-AI 901). After the ECN is issued, all TVA-originated correspondence related to the ECN must list the ECN number in the subject of the correspondence. All ECN forms will be entered in MEDS CIS when they are issued or reissued.

ENGINEERING CHANGE NOTICES (ECNs) BEFORE LICENSING - HANDLING

EN DES-EP 4.02

4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)

4.1.1 Initiating ECN (Continued)

#### -NOTE

A memo is not required when the design change is covered entirely by the issuence of a design exiteria document (or revision) or a Design Input Name as in EN DES-EP 2.01.

If the standard ECN S1 does not apply (see (subsection 4.6),

recommends in the mane that the NPB project prepare an

ECN cover sheet (Figure 1) to process any changes to

drawings or bills of material. Includes any available
information (scope, involved organizations, technical data,
branch-prepared Nonconformance Report (NCR), etc.) that

branch-prepared Nonconformance Report (NCR), etc.] that will expedite preparation of the cover sheet.

The initiator of the proposed change will coordinate with the NPD project to establish and define any needed change to drawings or Design Criteria Diagrams (DCDs) resulting from changed criteria. The initiator will also prepare an NCR for a design error when one is required.

4.1.2 Cover Sheet
Instructor
NPD Project

1. When a needed change is identified, immediately prepares an ECN cover sheet (form TVA 10575C), regardless
of the status of the drawings; prepares the SCOPE,
obtains accigns an ECN number, and indicates whether an IJ
analysis was required (see Figure 1).

from the project management staff

An NCR (ref. EN DES-EP 1.26) must be processed when an issued design document must be changed to correct a significant or recurring condition which could have resulted in a required safety-related function not being fulfilled. This excludes changes for preplanned design development, improvement of an already satisfactory design, changes that are directed by new or revised standards or regulations, and non-safety-related changes.

# 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)

4.1.2 Cover Sheet (Continued)

In:hafor
NPD Project (Continued)

#### NOTE

The expected (normal time for completing the cover sheet is within 10 workdays after approval of the IJ forms, 2 or

direction completion of\_

when a suppose branch or SDP identifies a proposed design change by a mone, the NPD project will provide an early response by either disapproving the change or completing the cover sheet through step 9 or 12. The expected (normal) time for response is within 10 workdays after receipt of the memo. After coordination with the dairyn project manager.

2. Determines which support branches and NPP project groups and if SDP will need to submit new or revised drawings to implement the design change; marks "Yes" for each at DATA SHEETS REQUIRED.

# NOTE

discipline
If a support branch or SDP is involved in procurement only, they are not identified at DATA SHEETS REQUIRED.

- 3. If a Final Safety Analysis Report (FSAR) has been submitted to the Nuclear Regulatory Commission (NRC), determines which support branches will need to prepare a revision to the FSAR text as a result of the design change; marks "YES" for each at DATA SHEETS REQUIRED.
- 4. Adds attachments to the ECN as needed for review and approval by any approving support branches. (Prior approval of sketches by the support branch or project may be needed to expedite the support branch review.)
  - Names any applicable vendor(s) at VENDOR(S) INVOLVED; makes all YES-NO marks called for by the cover sheet.

discipline.

design.

When a support branch concurrence indicates the change is required, and with the approval of the appropriate NPD project manager, the ECN may be prepared while the 1J forms are being completed (ref. EN DES-EP 4.40).

the discipline branch chief(s) or his designee (s)

11. On approval, sign at Approved; return the cover sheet to the NPD project, management shaff.

# 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)

4.1.2 Cover Sheet (Continued)

# Desma HUS Project Manager

 Reviews the ECN; signs at RELEASED if he approves. (See NPD project manager's approvals at item c in Figure 2.)

# -NPD Project (EGN Clerk) Management Staff

- Issues the cover sheet (see Figure 2 for distribution list) (ref. EN DES-EP 1.14).
- 14. Files and maintains the cover sheet original; maintains the working file (original sheets) of all ECNs for the project.

# Involved Design Sections

- 15. Submit a data sheet as in subsection 4.1.3 within 15 working days of the cover sheet release date, unless another date is given at DATA SHEETS REQUIRED.
- 16. Cite the ECN by number in the revision block of all revisions to drawings and bills of material related to the ECN; cite the ECN by number on all appropriate memos.
- 17. When a drawing revision covers more than one ECN, circle each changed area and cite the related ECN with a leader line.
- 18. On new drawings made for the ECN, put the ECN number beside the title block and inside the drawing border.

#### Involved Procurement Sections

- Cite the ECN by number on applicable requisitions, memos, and vendor drawings.
- 4.1.3 Data Sheet (See Figure 5.)

#### Engineering or Design Section Supporting ECN

 Records the ECN number on the data sheet; fills out the SCOPE.

# 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)

4.1.3 Data Sheet (See Figure 5.) (Continued)

# Engineering or Design Section Supporting ECN (Continued)

- Lists new/revised TVA drawings required for the ECN on the back side of the data sheet as follows:
  - a. Lists drawings for which EN DES has full responsibility, including design and procurement drawings, DCDs, Architect-Engineer (A-E) drawings turned over to EN DES, and bills of material.
  - b. Lists a revision to an approved vendor drawing: (1) when it causes a revision to a TVA drawing(s), or (2) when it is used with a revised TVA drawing(s), or (3) when it is used by construction forces to install equipment.
  - c. Enters the vendor's contract number in the remarks column for each vendor drawing listed.

#### NOTE

If more than one sheet is needed to record the section's drawings, use copies of form TVA 10575E (see Figure 6); assign page number(s) beginning with 3.

- If an FSAR has been submitted to the NRC, lists any FSAR text revisions on the back of the data sheet.
- Leaves the DWG REV (Drawing Revision) column of the drawing list blank at initial issue of the data sheet. (This entry is made by the NPP project EGN clerk.) management staff.)
- Records in the prescribed block the number of pages of the initial issue (RO) of the data sheet.
- 6. If the data sheet is by a support branch or SDP:
  - a. Gets the data sheet reviewed and approved through Branch Chief/SDP Manager.
  - b. Sends the data sheet to the NPD project within 15 workdays after the NPD project manager releases the cover sheet.

- 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)
  - 4.1.3 Data Sheet (See Figure 5.) (Continued)

# Engineering or Design Section Supporting ECN (Continued)

- 7. If the data sheet is by an APP project group:
  - a. Gets the data sheet reviewed and approved through Croup Head. Project Engineer/Discipline Group Head.

# NPD Project (ECN Glerk) Management Staff

Assigns the data sheet an identifying number (1, 2, 3, . . .n) from a master file or log; fills in the top (address) part of the data sheet.

#### NOTE

discipline .

Data sheets for a given ECN are numbered consecutively. If an additional section in assupport branch becomes involved after initial numbering, its data sheet gets the next unused number.

- Gets a MEDS accession number stamped on the data sheet.
- 10. Obtains the NPP project manager's review and release signature; distributes copies to those listed on Figure 5, and others as necessary, within 10 workdays after the NPP project receives the data sheet.
- 11. Files the data sheet original.
- 12. Monitors receipt of the data sheets for each ECN; ensures attention to any that are late.
- 13. As drawings are issued against the ECN, records on the data sheet the revision level and issue date of each as a means of knowing when <u>all</u> the required drawings have been issued.

# 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)

4.1.3 Data Sheet (See Figure 5.) (Continued)

# Supporting Organizations

14. Maintain a record of the actual issue date of each drawing issued against the ECN to assist in closing the ECN as in subsection 4.5.

#### NOTE

The ISSUE DATE-ACTUAL on the data sheet may be used for this purpose (supporting organization's option).

### NPD Project Management Staff

15. At the time the ECN is closed, ensures that the data sheet with all actual issue dates is distributed to the construction forces.

# 4.2 Revising ECN Cover Sheet

Before an ECN is issued (released), any necessary change to the cover sheet is made by line-through corrections, initialed, and dated by the person responsible for reviewing or approving the change. Any significant revision (e.g., one that requires a change to the cover sheet SCOPE) must be reviewed by the

discipline -

section supervisor and project engineer, any project group or support branch submitting data sheets, and any involved discipline support branch chief.

After the cover sheet is issued, changes are handled by the preparer as follows:

- a. Lines through the correction in black ink; uses care to avoid obliterating the original entry; initials the correction.
- b. Notates "Revised (date) (NPP project manager's initials)" in the upper right-hand corner of the cover sheet.
- c. Stamps a new MEDS accession number on the cover sheet.
- d. Distributes the changed cover sheet the same as the original.

# 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)

# 4.2 Revising ECN Cover Sheet (Continued)

Any significant revision (e.g., a revision that would require changing the cover sheet SCOPE) of the design change after the ECN is issued requires voiding the ECN and/or issuing another.

After the cover sheet is issued (released), an organization may make a change in its implementing of the change by revising the SCOPE on its data sheet. Any such change, however, must remain consistent with the SCOPE on the cover sheet.

An ECN cover sheet listed as closed on a closure sheet (see subsection 4.5) cannot be revised.

# 4.3 Revising Data Sheet

Data Sheets are revised on the existing data sheet (see Figure 5) unless all the revision blocks have been previously filled. In this case, the existing data sheet is replaced by a modified data sheet (see Figure 7). In both cases, the restrictions and procedures for reissuing the data sheet are the same and are stated in subsections 4.3.1 through 4.3.4.

# 4.3.1 Marking Changes to Data Sheet

Observe the following to clearly mark changes to a data sheet:

- a. For each drawing line item added, deleted, or changed, record the data sheet revision number in the right-hand column of the drawing list.
- Any change to page 1 of the data sheet is flagged by an R-bar in the right-hand margin.
- c. If a drawing is issued more than once for an ECN, the originating section must list on the data sheet the drawing number again for each revision, but not the revision level (the NPD project SECN electron will list the revision level).

# 4.3.2 Changes to Data Sheet SCOPE Statement

An organization may make a change in implementing the ECN by revising the SCOPE on its data sheet. However, any such change must remain consistent with the SCOPE on the cover sheet.

# ENGINEERING CHANGE NOTICES (ECN.) BEFORE LICENSING - HANDLING

5. At the project's option, discards or retains the support branch's or SDP's marked copy.

# NPD Project Manager (or Nie Delegate)

obtains the project moneger's
Reviews and, on approval, initials the signout matrix of the original data sheet.

#### NPB Project (EGN Glerk)

Reissues the data sheet, including a copy to the support branch or SDP that submitted it.

### Support Branch/SDP

-8. Files the reissued copy.

#### 4.4 Voiding ECN

Before voiding an ECN, the NPD project, management staff:

- Determines whether drawings have been issued, the FSAR has been modified, or if the design work is progressing on the change to be voided.
- 2. Notifies all support branches who reviewed and approved the ECN and requests technical comments on the plans to void the ECN.
- If there are no safety or technical reasons why the ECN cannot be voided/ the NPD project;
  - Marks the cover sheet "VOID" in bold letters across the SCOPE.
  - Gets any necessary dated coordinating initials from the involved project groups and/or support branches.

    design discipline.
  - design discipline.

    Obtains the NPD project manager's approval initials.
  - d. Distributes copies (include MEDS CIS).
  - e. Files the original voided cover sheet.

ENGINEERING CHANGE NOTICES (ECNs) BEFORE LICENSING -HANDLING

EN DES-EP 4.02

- 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)
  - Voiding ECN (Continued)

# NOTE

An ECN may not be voided until (1) all drawings issued under an ECN have been revised and reissued to retract the changes resulting from the voided ECN (i.e., to void the ECN, the drawings issued under the ECN must be returned to their pre-ECN condition before reissuing the drawings--no new ECN is required) and (2) the Nuclear Licensing Section of the Nuclear Engineering Support Branch has been instructed by any support discipline branches which provided FSAR revisions to modify the FSAR accordingly. If an ECN is in progress but no longer required, return the drawings to their original condition.

Closing Design Work for ECN (See Figure 8.)

discipline -

When WPD project records (plus any needed project) inquiry among involved support branches or SDP) show that all drawings on all data sheets for an ECN are issued, the NPD project lists the ECN on a closure sheet. If required by a data sheet, text revisions to the FSAR must be prepared (ref. EN DES-EP 2.01) reviewed, and submitted to the Nuclear Licensing Section of the Nuclear Engineering Support Branch prior to EN DES reporting that design work is complete on an ECN. (The supportabranch chief responsible for preparing the revision to the FSAR text verifies this requirement has been met when he initials the closure sheet.) One or more ECNs may be listed on a closure sheet. The closure sheet is initialed by the chiefe of the responsible support branches, the project manager of SDP, and the NPD project group beads that submitted data sheets for the ECN(s) being closed.

persons within organization

management staff The NPD project numbers the closure sheets consecutively starting with 1, gets the NPD project manager's signature, distributes copies of the closure sheet (see Figure 8 for distribution), and sends the original to MEDS CIS. Before a closure sheet is issued, corrections may be made by line-through in ink. These corrections must be initialed and dated by the individual responsible for approving or reviewing the change. An issued closure sheet may not be revised or voided.

# 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)

# 4.6 ECN S1 Change

# 4.6.1 ECN S1 Defined

Under the conditions specified in subsection 4.6.2, the responsible section supervisor may elect to change drawings without preparing and processing an ECN. Such a change is called an "ECN S1 change," and does not require an IJ analysis (ref. EN DES-EP 4.40). An ECN S1 is handled as follows:

- a. After determining that the change meets the conditions in subsection 4.6.2, make the required changes to the affected drawing.
- Enter "S1" at ECN NO. on the revision block of the affected drawing.
- c. Circle all changes to the drawing.

# 4.6.2 ECN S1 Allowed

#### NOTE

A minor revision is one that: (a) does not affect system functional performance nor design interfaces, (b) does not impact CONST's construction schedule, and (c) does not impact EN DES's design schedule.

An ECN S1 change may be used only for minor changes and when:

a. The change involves only one NPD section, or one support branch section, or

<sup>3
4.</sup> Refer to the EN DES Project Control User's Manual.

under the same discipline project engineer:

There are three specific exceptions which are allowed. These all involve drawings in the same discipline where all items are the responsibility of no more than two sections within the same group in the design preject. (1) a piping drawing, a support drawing, and associated calculations for the purpose of changing the design of a support as requested by an FCR; (2) a concrete drawing and a steel (main or miscellaneous) drawing for the purpose of changing anchor bolting as requested by an FCR; and (3) a schematic drawing, a connection drawing, and a cable drawing for the purpose of implementing a minor change as requested by an FCR.

# 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)

# 4.6.2 ECN S1 Allowed (Continued)

- b. The change involves procurement by a suppost branch not involved in the design, or
- c. The change is to a conceptual document generated in a discipline supposes branch for one of the following purposes:
  - (1) A change to make very minor editorial corrections, such as spelling, or
  - A change to add the Unique Identification (UNID) code only.
  - d. The change is to incorporate approved FCRs and meets the requirements of 4.6.2a.

### 4.6.3 ECN S1 Disallowed

The ECN S1 may not be used when:

- The change would result in a revision to: (1) the SAR document, (2) SAR drawings, (3) system performance, (4) design interfaces, (5) approved vendor drawings, (6) preoperational testing, (7) fuel loading date, or
  - (8) unit operation, or (9) requires backcharges, or
- b. There is doubt about whether another section, another EN DES organization, or CONST should be notified of the change, or

# c. The change would require physical work by CONST after a date agreed to by the NPD and the CONST project manager or after the issuance of the OL, or

- The affected unit is licensed for operation (refer to EN DES-EP 4.52), or
- e. The analyses (seismic, pipe break, thermal hydraulic, pressure drop, fluid flow, etc.) performed outside the group is affected, or

Vendor drawings turned over to TVA for revision responsibility are treated as TVA drawings.

<sup>1.</sup> See footnote 7.

- 4.0 ECN BEFORE ISSUANCE OF OPERATING LICENSE (Continued)
  - 4.6.3 ECN S1 Disallowed (Continued)
    - f. The control logic and/or monitoring of safety-related features is affected.

"The support branches normally do not use the ECN CL.

4.6.4 Monthly Review of ECN S1 Changes

design

discipline

Each\_Aproject manager shall provide to the suppost branches for review a monthly Drawing Information System (DIS)/Drawing Management System (DMS) tabulation that identifies the drawing number and revision level of each ECN S1 change. A copy of each monthly tabulation for each project shall be sent to the Design Quality Assurance Branch in the Office of Quality Assurance.

- 5.0 ECN IN TIME PERIOD "JUST PRIOR TO" ISSUANCE OF OPERATING LICENSE
  - 5.1 Initial Su mittal and Issue of ECN
  - 5.1.1 Initiating ECN

If an ECN S1 (subsection 4.6) does not apply, and in the case where the design and/or physical work will be initiated before the issuance of the OL but may not be completed until after receipt of the OL, an ECN cover sheet (form TVA 10575C) is used.\* The ECN is initiated as in subsection 4.1.1.

Any ECN issued after receipt of the QL is handled as an L-ECN or a P-ECN (ref. EN DES-EP 4.52).

In some cases, the NPD project may prefer that the physical work implementation of a design change be started after NRC issuance of the OL. As a procedural option to subsection 5.1, the NPD project may prepare an L-ECN for the unit involved (ref. EN DES-EP 4.52). However, the Unreviewed Safety Question Determination (USQD) certification required on the L-ECN Cover Sheet shall not be issued until after issuance of the OL. Therefore, the L-ECN cannot be issued until after issuance of the OL, but the design work may be accomplished prior to issuance of the OL. If this procedural option is chosen, the L-ECN cover sheet will be handled as in EN DES-EP 4.52.

# ENGINEERING CHANGE NOTICES (ECN#) BEFORE LICENSING -

EN DES-EP 4.02

- 5.0 ECN IN TIME PERIOD "JUST PRIOR TO" ISSUANCE OF OPERATING LICENSE (Continued)
  - 5.1.2 Cover Sheet

The cover sheet is handled as in subsection 4.1.2.

5.1.3 Data Sheet

The data sheet is handled as in subsection 4.1.3.

5.2 Revising ECN Cover Sheet and Data Sheet

Revisions to the cover sheet and data sheet issued just prior to issuance of the OL are handled as in subsections 4.2 and 4.3, respectively.

- 5.3 ECNs Not Completed Prior to Licensing

  Design

  NPD Project
  - Reviews the Outstanding Work Items List (OWIL) to ensure that all ECNs not completed by EN DES before the OL is issued are included.
  - Notifies by memo the Nuclear Engineering Support Branch and the Division of Nuclear Power of any incomplete ECNs (ECNs should be cross-referenced to the OWIL item identification number) and that USQDs will be required for implementation or completion of physical work.

### Nuclear Engineering Support Branch

 On notice from the NUC PR Outage Director (or his designee), writes a USQD against the OWIL item (ref. EN DES-EP 2.03); provides the NPP project with a reproducible copy.

<sup>9.</sup> ID-QAP-1.3 provides a description of the OWIL and defines the responsibilities and functions of EN DES, CONST, and NUC PR for controlling work on unlicensed units. ID-QAP-6.2 describes the OWIL and the procedure for headling the OWIL. ID-QAPs 1.2, 2.2, and 2.4 address related subjects.

- 5.0 ECN IN TIME PERIOD "JUST PRIOR TO" ISSUANCE OF OPERATING LICENSE (Continued)
  - 5.3 ECNs Not Completed Prior to Licensing (Continued)

    Danger WPD Project
    - Retrieves the original ECN cover sheet and stamps it with the following:

"OL issued before completion of ECN work; ECN work included in OWIL as item No.

 Stamps the reissued ECN cover sheet and the RO issue of the USQD with the same MEDS accession number; redistributes (including to MEDS CIS) the ECN Cover Sheet with the USQD attached.

#### NOTE

Subsequent revisions to USQDs are distributed without the ECN cover sheet and are sent to MEDS CIS as separate documents (ref. EN DES-EP 2.03).

### 5.4 Voiding ECN

Voiding an ECN issued just prior to issuance of the OL is handled as in subsection 4.4, except the NPD project will request that a USQD continuation be performed to determine if there is any safety impact on other approved ECNs (ref. EN DES-EP 2.03).

5.5 Closing Design Work for ECN

Closing design work for the ECN issued just prior to issuance of the OL is handled as in subsection 4.5.

# NOTE

Closing of the design work may be accomplished before or after issuance of the OL, but the ECN must have been issued prior to issuance of the OL.

5.6 ECN S1 Change

The ECN S1 may be used anytime before the OL is issued and all restrictions and handling instructions in subsection 4.6 are applicable.

#### 6.0 EXEMPTIONS

# 6.1 Future Nuclear Plants

This procedure is effective for all nuclear projects when the Limited Work Authorization is issued. At that time, the design project organization will compile a "base list" of all drawings issued for the project prior to the Limited Work Authorization, showing for each the drawing number, latest revision level, title, and issue date. This list will be the basis for EN DES design change control as required by ANSI N45.2.11-1974, Paragraph 8. All drawings issued or revised after the base list is established shall be in accordance with this procedure.

During the period between the disbanding of the EN DES task force and the issuing of the Limited Work Authorization, any drawing change that affects safety-related systems or cupper disciple branch(es) conceptual documents is coordinated with the cupper disciple branch(es) and documented by the cupper branch or have project initiating the change. Documentation is by use of a numbered design control memo or a Design Input Memo, as applicable.

Design control memos will be numbered, issued, and monitored by

design \_\_\_\_

# 6.2 Major Additions

the NPD project.

New (RO) drawings resulting from the addition of a major system or facility (cooling towers, radwaste buildings, etc.) to a nuclear plant under construction will be issued without an ECN.

The NPP project manager will release a memo describing the addition and the required completion date.

Any revisions to existing drawings and any change to the original scope of the addition will be handled through the established ECN procedure.

# 6.3 Original Drawing Issue

An ECN change may be incorporated in the original issue of a previously scheduled drawing without a cross-reference between the drawing and the ECN. No reference to the ECN will be made on the RO drawing, and the drawing will not be listed on an ECN data sheet. RO drawings issued solely to satisfy a change covered by an ECN will be handled according to the usual ECN procedure.

#### 6.0 EXEMPTIONS (Continued)

6.4 Revisions to Design Criteria Diagrams (DCDs)

A revision to a DCD may require an accompanying ECN (ref. EN DES-EP 3.09).

Any required change to a DCD must be completed within a year after issue of the associated ECN.

6.5 Revisions to Design Criteria Documents

A revision to a Design Criteria Document which results in a drawing change, requires that an ECN (ref. EN DES-EP 3.01) be prepared as in this procedure.

NOTES: 1. NED project to responsible for all entries.

X. All entries and signatures to be made in black ink.

Figure 1. ECN Cover Sheet 10575C for Use BEFORE Issuance of Operating License (See Figure 2 for Key and Distribution)

ENGINEERING CHANGE NOTICES (ECN.) BEFORE LICENSING -HANDLING

EN DES-EP 4.02

KEY

a. By the NPP project ECN clerk; normally 1, 2, 3, . . . n for a project.

(When this number sequence is impractical, use x001, x002, x003,

. . . x00n, where x is a digit chosen by the project.) The NPP daugh

project, support branches, and SDP use this number for a given change.

If an IJ was required, the ECN number will be the same as the number on the IJ.

- b. An IJ is required for changes that significantly affect the scope or a schedule milestone, or result in estimated total monetary increases, including the confidence factor, of more than \$500,000. Twelve months before the scheduled probable fuel loading of a unit, an IJ analysis is required for engineering changes that need additional cost or schedule information to proceed with the proposed change (ref. EN DES-EP 4.40).
- c. Release by the NPD project manager includes epproval of: (1) the change, based on the design criteria, SAR, and/or other controlling documents the information on the cover sheet (scope of review, physical work that must be completed by, etc.); (2) costs and changes to the schedules for design and constructions to the schedules for design and constructions and (2) his approval of the schedules for design and procurement work to proceed.
- d. If the ECN effects a change to only one unit, indicate "1" or "2"; if the change applies to both units, show "1 and 2."
- e. Record a brief description of and the reason for the change, and any applicable references. The SCOPE section includes a brief description of and reason for the change and any applicable references. The description of the change should be stated concisely and in terms of the objective to be obtained. Use cover sheet attachments (see Figures 3 and 4 in EN DES-EP 4.02) if more space is needed.
- f. Supervisor initiating the cover sheet confirms involvement of suppost branches/NPD project groups/SDP by coordinating the ECN before it is issued. Answer "Yes" only when the indicated organization will submit a data sheet to list new or revised drawings required for the change, or to list FSAR text revisions required due to the change. A separate data sheet will not be required of a suppose branch having procurement action only.

Figure 2. Key and Distribution List for Figure 1 (Sheet 1 of 3)

EN DES-EP 4.02

- g. Data sheets are due from every involved suppost branch/NPD project—group/SDP within 15 workdays after the NPD project manager releases the cover sheet. Record a date here only if the suppost branch/NPD-project group/SDP cannot supply a data sheet within 15 days and explain the delay under SCOPE.
- h. "Yes" if, as a minimum, the ECN requires change in a conceptual document [flow diagram, design criteria diagram, single line drawing, control and logic diagram, design criteria, equipment layout drawing (major equipment relocation), etc.] which affects a safety-related system. By mutual agreement, branches and projects may establish additional requirements for review and approval.
- i. If h is "Yes," the cover sheet originator determines which support branch(es) needs to review and approve the ECN based on the conditions set forth in h. If the ECN does not affect a support branch, he enters "N/A" and his initials to indicate a suppost branch approval signature is not needed.
- j. "Yes" only if the change is required: (1) to provide information needed for the initial FSAR submittal, (2) to provide information specifically requested by NRC to be included in the PSAR or FSAR, or (3) to be implemented quickly to meet licensing schedules. After the construction permit is issued but before the FSAR is issued, an SAR change (ref. EN DES-EP 2.01) is generally not required by a design change unless basic criteria have been changed.
- k. "Yes" only if the related preoperational test scoping documents and/or test instructions are issued and the change is required:
  (1) to facilitate testing, (2) to correct deficiencies discovered in testing or remove a condition which is preventing testing, or
  (3) to be implemented quickly to support the test schedule.
- "Yes" if EN DES believes the ECN involves an error for which the vendor is liable. If "Yes," CONST initiates the backcharge procedure, including accounting for labor/materials costs.
- m. "Yes-I" if the ECN involves the primary safety functions that could adversely affect a safety-related system of a Category I structure, device, or component being installed or modified. If the ECN involves the secondary safety functions that could adversely affect a safetyrelated system of a Category I(L) structure, device, or component being installed or modified, enter "Yes-I(L)." If the ECN involves both, enter "Yes-I & I(L)."
- n. "Yes" if an NCR related to the design change must be prepared. (See footnote on NCRs in section 4.0 of EN DES-EP-4.02.)

Figure 2. Key and Distribution List for Figure 1 (Sheet 2 of 3)

EN DES-EP 4.02

- o. "Yes" if the ECN is safety-related. If the ECN involves a <u>limited QA</u> program (e.g., fire protection, radwaste), enter "Yes\*" and show by footnote the type of limited QA program.
- p. If "Yes," send a copy of the ECN cover sheet and data sheets to the Architectural Support Branch. (Ref. EN DES-EP 4.46).
- q. "Yes" if the change affects the operation or environment of the main control room or auxiliary (backup) control room (ref. EN DES-EP-3.36).
- r. "Yes" if the ECN involves high-energy piping or safety-related systems in areas containing any fluid piping (ref. EN DES-EP-3.42). Mark "Yes" if any doubt exists.
- s. Enter the first milestone for which some or all physical work (design/procurement if no physical work is required) must be completed. EN DES is responsible for determining (ref. ID-QAP-2.2) and identifying (ref. ID-QAP-2.4) physical work that must be done before initial fuel loading. An entry at "1st Fuel Load" is necessary to identify a design change for such work.
- t. Specify any other events (e.g., hot functional test) for which the physical work must be effective. Put an asterisk (\*) in the block and footnote the event below the matrix.
- u. Denotes the number of attachments (memos, sketches, safety review, etc.) other than data sheets.

#### DISTRIBUTION

ECN cover sheets are distributed as follows:

Plant Superintendent Chief, Cost Planning and Control Staff, W12C74 C-K Manager of Construction, E7B24 C-K MEDS, W5B63 C-K

ECN cover sheets must also be distributed to any of the following who are required to submit data sheets and/or review the ECN:

Chief, Civil Engineering Support Branch Chief, Electrical Engineering Support Branch Chief, Mechanical Engineering Support Branch Chief Nuclear Engineer Chief, Architectural Support Branch Project Manager, Special Design Projects
