# ENGINEERING CHANGE NOTICES (ECHo) REFORE LICENSING -

EN DES-EP 4.02

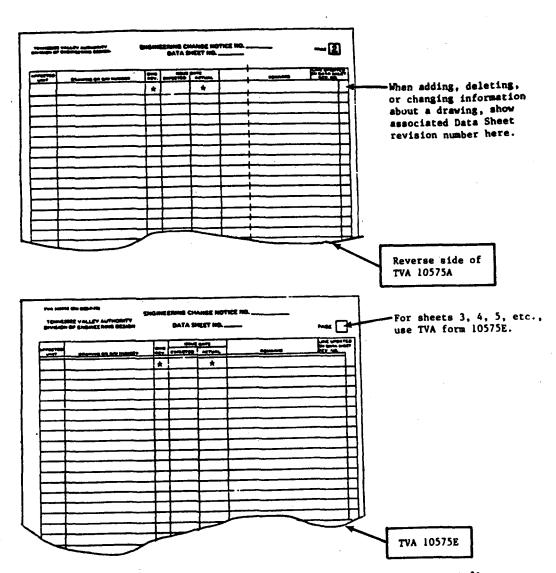

#### KEY

- a. Include the number of the parent ECN.
- b. Address the data sheet to the CONST Project Manager
- c. Record the MEDS accession number in the appropriate block for RO through R7.
- d. Even though this SCOPE may vary from the SCOPE in the ECN cover sheet, ensure that is consistent with the ECN cover sheet SCOPE.
- e. If the ECM effects a change to only one unit, indicate "1" or "2;" if the change applies to both units, show "1 and 2."
- f. If the ECM originator shows on the cover sheet that your branch/project-group is involved, prepare a data sheet. If your branch/project group-determines that they are not involved, print NOT INVOLVED as shown.
- g. Complete the signout and description block for the appropriate revision.

# DISTRIBUTION (Minimum; others as necessary)

Originating Section Plant Superintendent MEDS, W5B63 C-K

#### **EVALUATION SHEET**

Rev. Date 12/27/83

Task Force Category 5 for Watts Bar Nuclear Plant - Unit 1

2. Task Force Category Description and Related B&V Findings:

Procurement forms and flow diagrams specified different requirements for various valves: 1) F308, F314, F328, F894, F895, F896, F897; 2) F307; 3) F335, F336.

#### 3. Evaluation for Cause

A. Preliminary - 1) F308, F314, F328, F894, F895, F896, F897 - The design change process requirements apparently did not require that a review of the adequacy of previous procurements be made and documented when design conditions were revised. 2) F307 - The drawing preparation process apparently lacks a definitive policy on the manner of presenting design and operating conditions on isometric and flow diagrams. 3) F335, F336 - The component qualification process results were not required to be simultaneously tied to the design process and procurement process.

B. Final - 1) and 2) Our normal squadcheck and ECN process requires a review of all items affected by a design change for adequacy. Our flow and isometric diagrams list piping classifications and not actual operating pressure and temperature. Design conditions for the valves are calculated using operating temperatures and pressures. It was never intended that the valves be specified to flow diagram data. Also, misuse of the S1 ECN may have contributed to the discrepancies. 3) As above.

Resp. Org. 9 RB sleer / 19184 Task Force Concurrence

## 4. Evaluation for Generic Examples

Preliminary - The generic examples could be identified by: 1) F308, F314, F328, F894, F895, F896, F897 - Review all safety related EEB procured valves where system design pressure/temperature conditions have changed since procurements to verify consistency of procurement documentation. 2) F307 - A review of all interfaces of low pressure, normally idle systems with high pressure normally operating systems for the adequate presentation of design and operating conditions. 3) F335, F336 - The examples noted by B&V represented slow documentation of qualification rather than nonperformance of the qualification. Since this was ongoing incomplete work there is no need to identify generic examples. (However, the program control does need some improvement - see 10A.)

Final - 1) All EEB procured valves were compared to new design pressure/ temperature conditions using ANSI class rating and no discrepancies were found. 2) A review of all interfaces was performed and no discrepancies were found.

3) As above.

Resp. Org. MR Beleve 1/9/84 Task Force Concurrence 2/19/84

| 5. | Licensing | Basis | Satisfaction |
|----|-----------|-------|--------------|
|----|-----------|-------|--------------|

- A. Preliminary
  - 1) and 2) All examples identified thusfar are acceptable to use-as-is. However, both types of problem have the potential for resulting in a failure to meet the licensing basis. Therefore, this determination can not be made until the generic examples are identified. 3) N/A This work was in progress.
- B. Final
  - 1) and 2) All valves and interfaces were checked and found to satisfy the licensing basis. 3) N/A

Resp. Org. M R Belur 1/9/84 Task Force Concurrence 119/84

- 6A. Identification and Evaluation of Ongoing Corrective Action for Completed Work
  - A. Preliminary
    - 1) and 2) WBNEEB 8207 and ECN 3511 address the B&V findings with the following exceptions: F308 and F314. The Task Force is not aware of any corrective actions yet specified.
  - B. Final

N/A

Resp. Org. M R Below 1/9/84 Task Force Concurrence Loffen 1/9/84

- 7A. Identification of Corrective Action for Completed Work
  - A. Preliminary
    - 1) The generic deviations identified in 4 should be requalified to the current design conditions. 2) The flow diagrams should be revised to accurately and consistently present the design information. 3) N/A No deviations in completed work were substantiated.
  - B. Final

| 1), 2), and 3) Task Force is not aware of any action.                     |
|                                                                           |

8A. Implementation and Inspection of Corrective Action for Completed Work

10A. Identification of Corrective Action for Future Work

N/A

A. Preliminary
1) Policy needs to be established for positive reassessment of procurement
affected by design changes. 2) Drawing presentation of design conditions needs
to be better specified. 3) The process of requalifying components whose seismic
accelerations are analyzed to exceed procurement specifications needs to be
formalized and included in the EP system.

Resp. Org. MR Below 1/9/84 Task Force Concurrence

B. Final
The engineering procedures in place (ECN, squadchecking, signature, further review) are adequate to prevent recurrence. EP 4.02 has been revised and a memorandum issued by management, controlling the use of the Sl ECN. EP 5.06 has been issued (5-27-80) to control preparation and review of specifications. Together these steps should avoid the concerns identified in step 3A.

Resp. Org. M R Below / 19184 Task Force Concurrence 2/1/20 19184

SUBJECT:

ASSESSMENT OF ADEQUACY OF CORRECTIVE ACTION FOR FUTURE WORK FOR BLACK AND VEATCH TASK FORCE CATEGORY 5

For this category, the TVA task force for review of Black and Veatch findings determined that the condition was applicable to Watts Bar units 1 and 2 and that corrective action was required for completed and future work. QMS performed a surveillance in accordance with the attached scoping document to assess the adequacy of corrective action implementation for completed and future work, as well as the effectiveness of corrective action for future work. The results of that surveillance, contained in the attached surveillance report, verified the adequacy of the work accomplished.

Based upon our assessment of category 5, we conclude that this category can be closed by signing and dating item 12A, "Verification of Effectiveness of Corrective Action for Future Work."

Concerns: NO / / Yes / / (if yes, identify below) Results:

#### I. Management Summery:

The design processes evaluated are outlined in the attached surveillance scoping document and were determined to be in full compliance with requirements.

#### II. Conclusions and Recommendations:

Based upon the results of this surveillance, the corrective action implemented for both the completed and future work has been accomplished as committed by the TVA task force evaluation sheets for category 5.

# III. Details:

- A. Performed the following surveillance activities to verify the corrective action implementation for completed work:
  - Verify that a review of EEB valves was documented that verifies that ANSI class rating is consistent with the latest design pressure/temperature.

Results: Interviewed Marvin Belew of EEB who provided a copy of a WBN valve evaluation (EEB 830629 902) in which are listed several disparities in pressure and temperature values. This was resolved by WBEP as disclosed in an interview with Jerry Dorris. He indicated that the problem was really one of a misunderstanding in that it was thought that if the design pressure and design temperature were stamped on the valve plate then the valve could not exceed these values. However, the valves were AMSI class rated at much higher pressures and temperatures than design requirements. Therefore, the valves would meet the code even if there were pressures or temperatures higher than design values stamped on valve plate. It was merely a documentation problem and not a hardware deficiency problem.

Page 1 of 3

02420

2 10 3

2. Verify the results of the review in section III.A.1 by sampling:

Results: Obtained a copy of a WBN valve evaluation (REB 830629 902) and copies of MCR WBNEEB8207 and ECN 3511. The MCR and ECN changed the procurement design specifications to agree with design pressure/temperature on drawing 47W803-2.

 Verify that a review of interfaces of low pressure normally idle systems with high pressure normally operating systems for adequate presentation of design and operating conditions was documented.

Results: Interviewed Harvin Belew of EEB who indicated that the interface of low and high pressure systems was reviewed internally and that review was documented in the finding responses that are incorporated in appendix B of the Black and Veatch independent review of Watts Bar auxiliary feedwater system.

4. Verify the results of the review in section III.A.3 by sampling.

Results: Reviewed the Black and Veatch finding responses for findings F308, F314, F328, F894, F895, F896, F897, F307, F335, and F336 and they appear to be adequate.

- B. Performed the following surveillance activities to verify corrective action implementation for future work:
  - 1. Verify that EP 4.02 has been revised.

Results: EP 4.02 R13 was issued June 7, 1983, to reflect extensive changes in control of ECN S1. EP 4.02 is now in revision 16 dated July 23, 1984.

 Verify that a memorandum was issued in conjunction with EP 4.02 R13 to control the ECW S1.

Results: There were three memorandums written in conjunction with EP 4.02 Rl3 that dealt with the changing of procedure for control of ECM S1 (QAB 830301 001, OQA 830527 002, and OQA 830712 500).

3. Verify that EP 5.06 has been issued.

Results: EP 5.06 Rl was issued May 27, 1980, to reflect control of preparation and review of specifications. EP 5.06 is now in revision 2 dated July 23, 1984.

Page 2 of 3

C. Performed the following surveillance activities to assess the effectiveness of corrective action for future work.

Assess the effectiveness of the revisions to EPs 4.02 and 5.06 on the control of valve specifications for future work.

Results: As a result of the revision to EP 4.02, the use of the ECN S1 is better controlled in that some system changes that were handled by an ECN S1 are now handled by a regular ECN and are squadchecked through affected organizations. There is now better control over the preparation and review of future specifications as a result of the revision to EP 5.06.

I. Verification of Corrective Action Implementation for Completed Work

Perform the following surveillance activity:

- A.1. Verify that the following was documented: A review of EEB valves to verify ANSI class rating is consistent with latest design pressure/temperature.
- A.2 Verify the results of the review by sampling.
- B.1 Verify that the following was documented: A review of interfaces of low pressure, normally idle systems with high pressure, normally operating systems for adequate presentation of design and operating conditions.
- B.2. Verify the results of this review by sampling.
- II. Verification of Corrective Action Implementation for Future Work

Perform the following surveillance activity:

Verify that EP 4.02 has been revised, that a memorandum has been issued to control the ECN S1, and that EP 5.06 has been issued.

III. Assessment of Effectiveness of Corrective Action for Future Work

Perform the following surveillance activity:

Assess the effectiveness of the actions in II in controlling the work by sampling work output and comparing to the requirements.

STANDARD DS-E18.3.5
ORIG MS9UE: 5-15-84
REV NO:
REV DATE:

#### 1.0 GENERAL

840717H0001

119

This design standard contains instructions for preparing detailed procurement specifications for certain items requisitioned by the Instrumentation and Controls (I&C) Contract Engineering Sections of the Electrical Engineering Branch (EEB).

Appendix A contains general instructions for data sheet preparation and the abbreviations that are to be used.

Appendix B contains detailed instructions for completing each line of a data sheet (TVA 10581). A copy of the data sheet relating to each different procurement item follows the instructions.

#### 2.0 RESPONSIBILITY

Areas of EN DES responsibility for initiating, reviewing, and routing of purchase requisitions and procurement documents are defined in EN DES-EP's 5.01, 5.20, and 5.33. (See section 5.0 for titles.)

#### 3.0 FORMAT

Whenever possible, the format defined in EN DES-EP 5.30 is to be used for the I&C technical specifications section of a purchase requisition.

Following is a list of the common parts of the specification. They should be ordered as shown.

CERTIFICATION SHEET--If applicable, in compliance with EN DES-EP 3.05.

ASME SECTION III LOCATOR SHEET--If applicable, as required by NCA-3252.

TITLE SHEET--Conforms to EN DES-EP 5.30, Attachment No. 1.

TABLE OF CONTENTS--Conforms to EN DES-EP 5.30, Attachment No. 1.

LIST OF ABBREVIATIONS AND ACRONYMS--If needed.

MAIN BODY--Patterned after EN DES-EP 5.30 whenever possible. The nine sections called for in section 5.5 of that EP are to be used in all formal (numbered) specifications. EN DES-EP 5.30 requirements on the nine standard sections are extended as follows:

- a. Include in 4.0 General Requirements the TVA classification for the equipment.
- 1. This design standard supersedes EN DES-EP 5.06.

TVA

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUF 5-15-84

REV NO.

b. Information in 7.0 Detailed Requirements can be either written descriptions, completed uata sheets, or bills of material for standard instruments. If the specifications are written descriptions, the equipment must be thoroughly described by its operating and physical characteristics as well as its application description. If the specifications are on data sheets, the sheets must be completed in accordance with Appendix A of this design standard.

DATA SHEETS--See Appendix A of this design standard.

FIGURES/DRAWINGS -- As Required.

APPENDIXES--When used, include Contract Document Requirements List (CDRL), Vendors List of Submittals to the Materials Engineer (VLS-M), Vendors List of Submittals to the Technical Engineer (VLS-T) and any other pertinent information (see EN DES-EP 5.30, Attachment No. 1, page 21).

#### 4.0 REVIEW

Formal review of the specification occurs after it becomes a part of a requisition, prepared by the 1&C Contract Engineering Section, as described in EN DES-EP 5.01.

#### APPENDIX A

# A1.0 DATA SHEET PREPARATION

The preferred form used to describe a piece of equipment is a data sheet designed to expedite the preparation of the specification. The design engineer shall be responsible for the adequacy of any data sheet he is required to complete. The existing data sheet will be used unless the designer can justify a data sheet revision. (Any changes to data sheets are to be coordinated with the I&C Contract Engineering Section of EEB.)

An independent reviewer must verify the data sheets for the procurement request as directed by EN DES-EP 5.20.

#### 1.1 SEPARATE LISTINGS

Data sheets generally describe several instruments of the same type. In certain cases, similar instruments should be listed on separate data sheets. These guidelines should be observed when listing similar instruments on data sheets.

- Similar instruments in different systems shall be listed on separate data sheets.
- b. Similar instruments with different qualification requirements shall be listed on separate data sheets (e.g., non-safety related, seismin category I(L) and IEEE Class IE devices shall not be listed on the same data sheets).
- c. Instruments that are similar in function or design shall be listed on separate data sheets if their operational characteristics differ greatly from each other, that is, if there are great variations in spans, operating pressures or temperatures, etc.

#### 1.2 REPRODUCTION

Data sheets will be reproduced many times, so only black ink (ballpoint or fine felt tip) shall be used - filling in the data sheet blanks. Do not use pencil or in than than black to fill out data sheets. Whenever possible reproductions of data sheets shall be made from originals.

All information shall be inside the heavy black borderline on the data sheet page to avoid losing information during the reproduction process.

TVA

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15 REV NO: REV DATE

# 1.3 SPECIFYING ENVIRONMENTAL CONDITIONS FOR CLASS 1E EQUIPMENT

When a device is specified as IEEE Class 1E equipment, data sheet TVA-10581-30 shall be completed by the design project and included in the Purchase Request (PR). If this data sheet is not included in the PR, the procuring branch will return the PR to the originating branch/project. (Processing procedures are described in EP 5.20).

#### 1.4 USE OF "MANUFACTURER'S STANDARD"

"Manufacturer's Standard" ("MS") shall be used to specify an operating characteristic only when the performance of that characteristic will not affect the intended function of the device or its ability to interface with other equipment.

"MS" shall not be used to specify operating or interfacing characteristics that affect the ability of the device to perform its intended function when those characteristics have not been defined by the design engineer.

## 1.5 DEVICE IDENTIFICATION

The information entered on TVA form 10581-XX (data sheets) shall reflect the actual minimum requirements for the process function. It shall not reflect the performance characteristics of any particular manufacturer's equipment except where the item must match and work with existing equipment and where the interface requirements of the existing equipment cannot be determined. The "Manufacturer" and "Model No." planks on the TVA data forms are intended for identifying only the general type of device required. They do not define the performance characteristics of the device.

### 1.6 INSTRUMENTS IN A LOOP

In this design standard, an instrumentation loop means a group of instruments (transmitters, power supplies, indicators, controllers, etc.) connected to form a system that performs a specific function. When specifying single instruments that form part of a loop, the designer must ensure that all instruments perform satisfactorily with other instruments in the loop. When specifying an instrument that is part of a loop, TVA form 10581-31 (see section 2.31) must be completed and included in the PR. If the form is not included the PR will be returned to the design project engineer by the Procurement Group.

# A2.0 ABBREVIATIONS

The abbreviations used in this design standard are from one of the following sources or have been created specifically for use on the data sheets:

a. Abbreviations and Symbols, TVA, 1980

TVA

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

5-15-84

ORIG ISSUE:

REV NO.

b. American National Standards Institute (AMSI) Standard Y1.1-1972

A - Ampere (when used with a prefix, i.e., mA)

AC - Alternating current

ADJ - Adjustable

ALM - Alarm AMB - Ambient

AMP - Ampere AMPL - Amplifier

ANSI - American National Standards Institute

AUTO-MAN - Automatic to manual

AUX - Auxiliary BARO - Barometric

C - Degrees CelsiusCA - Calibrated accuracy

CA - Calibrated accu CALC - Calculated

CAL - Calibration
CAP - Capacity
CHKR - Checker
CKT - Circuit
CONN - Connection
CONT - Control

CV - Valve coefficient of flow

DC - Direct current

DECR - Decrease
DSGNR - Designer
DIA - Diameter
DIAPH - Diaphragm
DIFF - Differential
DIM - Dimension

ECN - Engineering Change Notice

EFF - Effect ELEC - Electrical

DISPL

EMF - Electromotive force

- Displacer

ENGR - Engineer (usually the designer)

EXT - External EXTN - Extension

F - Degrees Fahrenheit
FT/S - Feet per second
FS - Full scale
GPM - Gallons per minute

GND - Ground

Hz - Hertz (cycles per second)

ID - Inside diameter
ILLUM - Illumination
IMPD - Impedance
INC - Incremental

INCR - Increase
INDEP - Independent
INDIC - Indicating
INS - Insulation

ISOL - Isolation (electrical)

JCT - Junction

LBf - Pound (force)

LBm - Pound (mass)

LG - Length

LIM SW - Limit Switch

LT - 'ight
MAN - manual
MATL - Material
MAX - Maximum
MEAS - Measurement
MFR - Manufacturer
MIN - Minimum

MS - Manufacturer's Standard

MULT - Multiple NA - Not applicable

NEMA - National Electrical Manufacturers Association

NO. - Number
NOM - Nominal
NPT-F - Nationa

NPT-F - National pipe thread-female

OPRG - Operating

OVV PROT - Overvoltage protection

PD - Pipe diameters

PNL - Panel POSN - Position

PR - Procurement Request

PRESS - Pressure
PROPNL - Proportional
PROT - Protection

PSIA - Pounds per square inch absolute PSIG - Pounds per square inch gauge

PT - Point
QTY - Quantity
R - Revision
REF - Reference
REQD - Required

RFF - Raised face flange

RGLTR - Regulator RMT - Remote RNG - Range

RTJ - Ring type joint

SCFM - Standard cubic feet per minute

SCHED - Schedule

SG - Specific gravity

# B1.0 GENERAL (TVA-10581-01)1

The first ten lines of the data sheets are for general information common to all data sheets. The first data sheet in the series is for use when no standard data sheet is available or as a supplementary or continuation sheet for a standard sheet.

The following instructions on the first ten lines apply to all of the data sheets:

- Line 1 ITEM NO.--This is the requisition item number and should be left blank. It will be filled in by procurement personnel when the requisition is assembled.
- Line 2 QUANTITY--Enter the total number of devices being specified on this data sheet, or enter "See Below" if they are tabulated below.
- Line 3 INSTRUMENT NO.--Enter the instrument number(s) if there are only a few. If there are too many to fit on this line, write "See List" or "See Below," whichever applies.

The instrument number is the unique identification (UNID) number. On those data sheets where there is only one device listed, the UNID number is placed here. On those data sheets where a number of devices are listed in columns, the UNID number is shown in the column.

- Line 4 IEEE CLASS--For equipment that must be qualified in accordance with IEEE-323, place an "X" in the block labeleu "IE", otherwise place an 'X" in the block marked "NA" (see Note 4).
- Line 5 SEISMIC CATEGORY--For equipment requiring seismic qualification, place an "X" in the block labeled "I" or "I(L)." For equipment not requiring seismic qualification, mark "NA."
- Line 6 ASME CODE CLASS--For equipment requiring certification to the ASME code enter the applicable code class; otherwise place an "X" in the block labeled "NA."
- Line 7 MANUFACTURER--This line is used when only one manufacturer's product is known to be acceptable, or to identify a preferred manufacturer whose equipment is described on the data sheet.

  Use "or equal" symbol when filled in.

If the instrument forms part of an instrument loop, Form TVA-10581-31 must also be completed (see B31.0).

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84 REV NO: REV DATE:

line 8 - MODEL NO.--This is filled in when line 6 is used. Use "or equal" symbol when filled in.

Line 9 - CASE STYLE/MATL--Use for case style and material.

Line 10 - ENCLOSURE--Use such descriptions as general purpose, dustproof watertight, or NEMA 1, 3, 4, 12 in accordance with ANSI/NEMA ICS 6-78.

Line 11 - MOUNTING--Such as surface, flush panel, or pipe stand.

The rest of the sheet should also be completed as follows:

REQUISITION NO. --Leave this space blank. It will be filled in, when necessary, by the procurement section.

SPECIFICATION NO. -- Leave blank.

DATA SHEET NO.:--This should be identified by a number as assigned by your design project; otherwise it will be filled in by the procurement section.

PLANT -- Identity the project.

PR--Enter the procurement request number.

ECN--Enter the ECN number when applicable.

 ${\tt DSGNR\textsuperscript{--}Identify}$  yourself and the date.

CHKR--Have the checker initial and date.

#### Notes:

- Each data sheet has some space to use for remarks and information in footnotes. Place a number in parentheses on the line to which the mote refers and a corresponding number in parentheses next to the note at the bottom of the data sheet. Use this area for special comments, unusual features, and accessory specifications.
- Try to make each data sheet as complete as possible. Refer to information in the general specifications or procurement request only as a last resort.
- Data sheet sections marked "Bidder information" are to be completed by the bidder only; do not write in these spaces.

# B2.0 STEAM ORIFICE PLATE (TVA-10581-02)1

Lines 1-3 and 5-8 should be filled out in accordance with the instructions in section B1.0.

Line 11 - MOUNTING--Give the rating and description such as 300# RFF (raised face flange) or 600# RTJ (ring type joint).

Line 12 - STEAM QUALITY--In percent or saturated.

Line 13 - STEAM SUPRHT--Give superheat in degrees F or C (zero if saturated).

Line 14 - BARO PRESS--Give average barometric pressure or altitude above sea level.

Line 15 - ACCURACY--Give required accuracy in engineering units over the range of interest. (For example: ±10#/hr from 100,000 to 300,000 #/hr.)

Line 16 - METER TYPE--Bellows, diaphragm, mercury, etc.

Line i8 - MATERIAL PLATE -- 304SST, 316SST, etc.

Line 19 - DRAIN HOLE--Yes or no. Usually yes, particularly if the steam is saturated.

Line 20 - TAP LOCATION--Designate "flange" (1" upstream and 1" downstream), "vena contracta" (1 PD upstream and vena contracta downstream), or "pipe taps" (2-1/2 PD upstream and 8 PD downstream).

Columns - The columns have been designed for listing more than one orifice plate per page.

ITEM NO.--Will be filled in by procurement personnel.

INSTRUMENT NO. -- Identify each plate.

QTY--Number of plates with this instrument number.

PIPE SIZE--Nominal pipe size.

<sup>1.</sup> Completion of TVA 10581-31 also required (see B31.0).

REV DATE

SCHED OR ID--Enter the pipe schedule number or give the exact internal diameter.

OPRG TEMP F--Give the operating temperature (degrees F). If temperature varies, give range.

OPRG PRESS PSI--Give the operating pressure (psig or psia, state which). If pressure varies, give range.

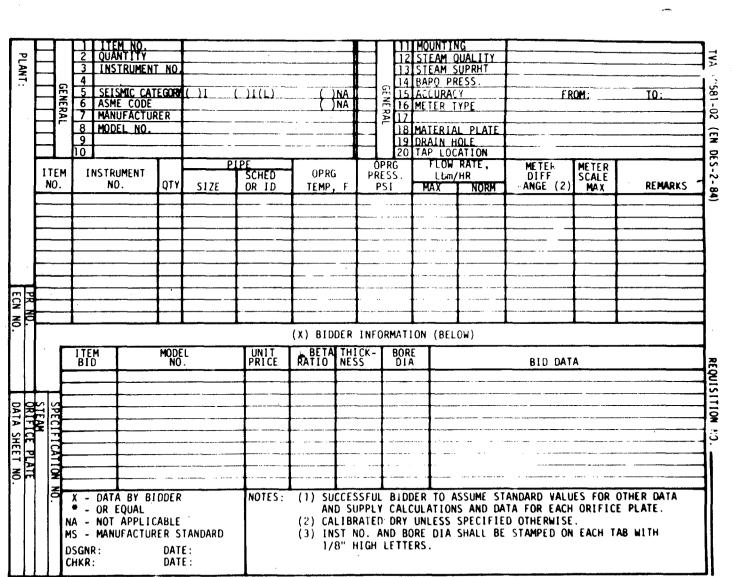

FLOW RATE LBM/HR--Under "MAX" enter the maximum flow rate or if used with a transmitter, indicator, or recoider, give the 100-percent full-scale flow rate. Under "NORM" enter the normal flow rate, or if it varies widely, show 70 percent of maximum.

METER DIFF RANGE--Enter the differential that will result in a 100-percent tull-scale deflection (or output) on the meter for transmitter) used with the orifice. Where possible give the differential in inches water column ("WC"). (As indicated by Note (2), this is usually for a meter calibrated dry.)

METER SCALE MAX--Give the maximum (100 percent) scale reading of the meter (or for a transmitter, list the maximum flow rate to be measured).

#### NOTE

The "METER DIFF RANGE" must correspond with the "METER SCALE MAX" (i.e., the meter or transmitter must show 100-percent full-scale deflection (output) when the differential input is equal to the specified "METER DIFF RANGE").

# B3.0 LIQUID ORIFICE PLATE (TVA-10581-03)1

Lines 1-3 and 5-8 should be filled out in accordance with the instructions in section B1.0.

- Line 11 MOUNTING--Give the rating and description such as 300# RFF (raised face flange) or 600# RTJ (ring type joint).
- Line 12 LIQUID--Give the name of the flowing medium such as raw water or condensate.
- Line 13 BASE TEMP--Give the temperature on which volumetric flows are based.
- Line 14 S G @ BASE TEMP--Give the specific gravity at the base temperature. Water is 1.0 at  $39.1^{\circ}F$ .
- Line 15 ACCURACY--Give required accuracy in engineering units over the range of interest. (For example: ±5 gpm from 400-500 gpm.)
- Line 16 METER TYPE--Bellows, diaphragm, mercury, etc.
- Line 18 MATERIAL PLATE--304SS, 316SS, etc.
- Line 19 VENT LOCATION--Designate "top" if the fluid may have entrained gases; otherwise write 'none."
- Line 20 TAP LOCATION--Designate "flange" (1" upstream and 1" down-stream) "vena contracta" (1 PD upstream and at the vena contracta downstream), or "pipe taps" (2-1/2 PD upstream and 8 PD downstream).
- Columns The columns can accommodate listing more than one orifice plate per page.

ITEM NO.--Will be filled in by procurement personnel.

INSTRUMENT NO. -- Identify each plate.

QTY--Number of plates with this instrument number.

. PIPE SIZE--Nominal pipe size.

# B5.0 THERMOCOUPLES AND TEST WELLS (TVA-10581-05)

Before specifying thermocouple assemblies or test wells, the designer should become familiar with ANSI-MC 96.1-1975, "Temperature Heasurement Thermocouples," published by the Instrument Society of America (ISA).

The first eleven lines should be filled out in accordance with the instructions in section B1.0, except line 10, HEAD MATERIAL, where the head material should be listed, such as cast iron or aluminum. On line 10 indicate where the assembly is mounted, such as pipe, elbow, duct.

Line 12 - ISA TYPE--List the thermoc uple materials and ISA type such as:

Copper-Constantan Type T Iron-Constantan Type J Chromel-Alumel Type K Chromel-Constantan Type E

- Line 13 GAUGE--Enter the wire size of the element.
- Line 14 SHEATHED--Check "yes" or "no." If "yes" is checked, indicate sheathing material required.
- Line 15 INSULATION--List the material of the insulation. If it is sheathed it will be MgO or the like. If it is not sheathed, list material and type such as:

Ceramic - Circular - One piece Ceramic - Oval - 1" Lengths Ceramic - Fish Spine

- Line 16 NIPPLE SIZE--Give the nipple size and length. 3/4" IPS is typical. If a union is required, check "yes", otherwise check "no."
- Line 17 CONDUIT--Give the connection size for the coduit.
- Line 18 WELL ( ) TUBE ( )--Check whether the thermocouple is to be supplied with a well or tube and indicate material.
- Line 19 TYPE--Specify whether the well is "straight" or "tapered."
  A protection tube is "straight"
- Line 20 CONSTRUCTION--Specify whether a dcilled or a built-up well is required.

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18 3.5

ORIG ISSUE: 5-15-84 REV NO: REV DATE:

Line 21 - CONN SIZE--Specify the process or external connection size.

Columns - The columns can accommodate listing more than one thermocouple assembly or test well per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Give the unique identification (UNID) number. There may be two instrument numbers per thermocouple/well combination (e.g., TW and TE, which fit together).

QTY--Enter the quantity of assemblies with this number.

DIMENSION U. --Enter the insertion length (in inches).

T.--Enter the lagging extension length (in inches).

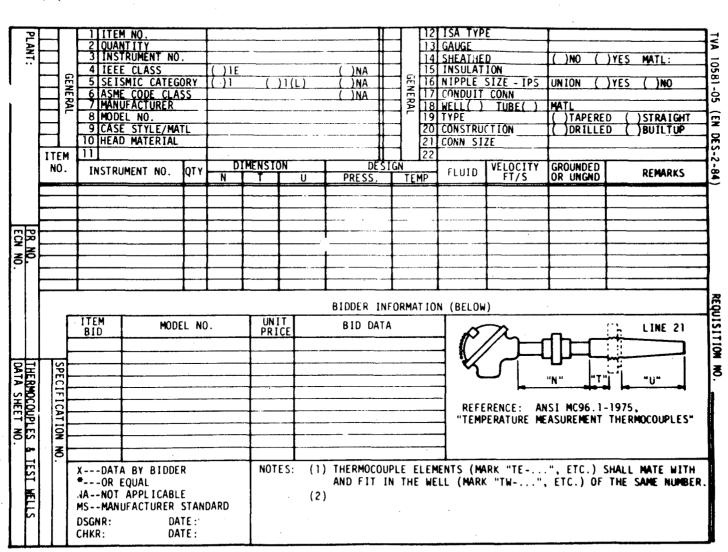

N.--Enter the connection head extension length (in inches).

DESIGN - PRESSURE and TEMP--Give the design pressure and temperature for the pipe or system in which the assembly will be installed.

FLUID--Give the tlowing fluid.

VELOCITY FT/S--Enter the maximum velocity of the fluid. When specifying fluid velocity, be sure to allow for vibrational effects (see "Power Test Code Thermometer Wells" by J. W. Murdock published in Transactions of ASME, Journal of Engineering for Power, October 1959).

GROUNDED or UNGND--Specify whether the thermocouple tip will be grounded or ungrounded in the well or sheath.

#### B6.0 LEVEL SWITCHES TVA-10581-06)

The first eleven lines should be filled out in accordance with the instructions in section B1.0.

- Line 12 TYPE--Enter the type of the required level measurement technique (float, conductivity, sonic, displacer, etc.).
- Line 13 CONDUIT CONN--Enter the conduit connection size.
- Line 14 ELEC TERM--Give the type of electrical termination desired such as screw terminals or 18" leads.
- Line 15 SWITCH TYPE--Give the type of switch (dry contact, semiconductor, snap, etc.) desired. (Mercury is not allowed in nuclear plants.)
- Line 18 PROOF PRESS--Give the maximum pressure the unit must withstand without a change in calibration.
- Line 20 PROCESS CONN--Enter the size and type of the process connection.
- Columns The columns can accommodate listing more than one level switch per page.

ITEM NO. This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO. Enter the unique identification (UNID) number.

QTY--Enter the quantity of units with this number.

SERVICE - ADJ RANGE--Enter the range over which the set point can be adjusted. Be sure to specify the units of measurement. If you cannot list these units at the top of the column, put a number in the parentheses and add the information under a numbered note.

SERVICE - FLUID--Enter the kind the material that is being monitored.

SERVICE - TEMP MAX--Enter maximum design temperature.

SERVICE - PRESS MAX--Enter maximum design pressure.

SERVICE - WS PARTS MATL--List the materials of construction for the wetted surface parts.

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84

REV NO.

SWITCH - QTY and FORM--Give the number of switches in each instrument and the configuration of the poles, such as 1 - DPDT or 2 - SPST.

SWITCH - CONTACT RATING - AMP, VOLT, and AC or DC--List the required contact rating for the service such as 0.1, 140, DC or 5, 120. AC. This may require both minimum and maximum contact ratings in order to satisfy both electrical and mechanical requirements.

TRIP POINT - LEVEL, INCR DECR, OPEN CLOSE--Give the range in engineering units of the required trip point. Note: This must be the required trip range including required repeatability, not the adjustable range of the switch.

RESET POINT FIXED LEVEL, ADJUSTABLE RANGE/REPEATABILITY--If the required reset range is known at time of specification, specify the range in engineering units of the required reset point. The reset range must include the remited repeatability. If reset point must be field adjustable, specify the range of adjustment and the required repeatability of the reset point in engineering units.

### B7.0 PRESSURE SWITCHES (TVA-10581-07)

The first eleven lines should be filled out in accordance with the instructions in section B1.0.

- Line 13 CONDUIT CONN--Enter the conduit connection size.
- Line 14 ELEC TERM--Enter the type of electrical termination desired, such as screw terminals or 18" leads.
- Line 15 SWITCH TYPE--Enter the type of switch desired, such as snap or mercury. (Mercury is not allowed in nuclear plants.)
- Line 18 PROOF PRESS--Enter the maximum pressure the unit must withstand without a change in calibration.
- Line 19 WS PARTS MATL--Enter the materials of construction for parts in contact with process fluid.
- Line 20 PROCESS CONN--Enter the size and type of the process connection.
- Columns The columns can accommodate listing more than one pressure switch per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number.

QTY--Give the quantity of units with this number.

SERVICE - ADJ RANGE--Specify the range over which the set point can be adjusted. Be sure to specify the units of measurement. If you cannot list these units at the top of the column, put a number in the parentheses and add the information under a numbered note.

SERVICE - FLUID--Enter the material that is being monitored.

SERVICE - TEMP AMB MAX--Enter maximum ambient temperature. Remember that pressure switches should be isolated from the process temperature by a sensing line.

SERVICE - PRESS MAX--Give maximum design pressure.

ORIG ISSUE: 5-15-84

REV NO. REV DATE:

SWITCH - QTY and FORM--Give the number of switches in each instrument and the configuration of the poles, such as 1 - DPDT or 2 - SPST.

SWITCH - CONTACT RATING - AMP, VOLT, and AC or DC--Give the required contact rating for the service, such as 0.1, 140, DC or 5, 120, AC. This may require both minimum and maximum contact ratings in order to satisfy both electrical and mechanical requirements.

SWITCH TRIP POINT, PRESS, INCR DECR, OPEN CLOSE--Enter the range in engineering units within which the switch must trip.

Note: This includes the required trip point and repeatability; it is not the adjustable range of the switch.

SWITCH RESET POINT, FIXED PRESS, ADJUSTABLE, RANGE, REPEAT-ABILITY--Enter the reset point for a fixed reset point. This range must include the required repeatability of the switch reset point. If the reset point must be field adjustable, list the adjustable reset range and repeatability.

### B8.0 PRESSURE GAUGES (TVA-10581-08)

Before completing this data sheet, the designer should review ANSI B40.1-1980, "Gauges - Pressure and Vacuum - Indicating Dial Type - Elastic Element".

Lines 1-3, 6-8, and 11 should be filled out in accordance with the instructions in section B1.0.

Line 4 - TVA PIPE CODE--Enter the TVA pipe code.

Line 5 - SEISMIC CATEGORY--Mark the seismic category. Category 1(L) is the highest level of seismic qualification for a pressure gauge.

Line 9 - CASE MATL--Check the required case material.

Line 10 - WINDOW MATL--Check the required window material.

Line 12 - PULSATION DAMPING--If pulsation damping is required mark "yes", otherwise mark "no."

Line 13 - DIAL: DIA & COLOR. 4-1/2", BLACK ON WHITE--The 4-1/2" size dial and black numberals on white background are standard.

Make changes only for engineering reasons.

Line 14 - ACCURACY GRADE--Enter an accuracy grade from table 08.

TABLE 08 Accuracy Grades

| Accuracy<br>Grade | Lower 1/4<br>of Scale | Permissible Error<br>(% OF Span)<br>Middle 1/2<br>of Scale | Upper 1/4<br>of Scale |
|-------------------|-----------------------|------------------------------------------------------------|-----------------------|
| 4 <b>A</b>        |                       | 0.1                                                        |                       |
| 3 <b>A</b>        |                       | 0.25                                                       |                       |

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84 REV NO:

REV DATE:

Line 16 - ELEMENT TYPE. BOURDON--Change this only if a bourdon is not satisfactory.

Line 17 - WS PARTS MATL--Enter the material required for the socket and bourdon element, such as bronze, steel, or 316SS.

Line 18 - % OVERRANGE--Enter the amount of overrange required without damaging the gauge. If not significant or none is required, write "MS."

Line 19 - BLOWOUT PROTECTION. SOLID FRONT--If solid front is not available, specify "back" for blowout back or "disc" for a blowout disc in back or side. If gauge is surface mounted, be sure surface has a hole to permit functioning of blowout protection feature.

Line 20 - CONNECTION: 1/2" BACK--The 1/2" back is most common for panel or rack mounting. If some other size or position is required, strike "1/2" BACK" and specify your requirements.

Columns - The columns can accommodate listing more than one pressure gauge per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

 $\label{localization} \textbf{INSTRUMENT NO.--Enter the unique identification (UNID)} \\ \textbf{number}.$ 

QTY--Enter the quantity of units with this number.

RANGE--Enter the minimum and maximum points on the scale.

REMARKS--List accessories such as siphons, snubbers, or diaphragm seals. Be sure to give complete details, and if more room is needed used footnotes.

MODEL BID and UNIT PRICE--These columns are to be filled in by the vendor when he submits his proposal.

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE 5-15-84 REV NO. REV DATE:

#### B9.0 RECORDERS (TVA-10581-09)1

The first eleven lines should be filled out in accordance with the instructions in section 81.0. Fill out the balance of the sheet as follows:

- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, then mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 13 CONDUIT CONN--Enter the required conduit connection size.
- Line 14 POWER SUPPLY--Enter the power available such as 117V 60Hz 10.
- Line 16 INTERNAL FLEUM--Mark "ye " if internal illumination is required, "no" if it is not required.
- Line 18 CHARTS--Enter quantity of charts required or how long the original quantity should last, such as "1-year supply."
- Line 19 INKSET--Enter amount of ink required or how long the original amount should last, such as "1-year supply." Enter NA if "MARK TYPE" (line 17) was specified as thermal.
- Line 20 AMBIENT TEMP--Enter the ambient temperature limits of the area where this equipment will be installed. If device is designated Class 1E refer to section B30.0 before completing this form.
- Line 21 CHART SIZE--Enter the width if strip chart, or diameter if circular.
- Line 22 CHART STYLE--Mark "strip" or "circular."
- Line 23 CHART SPEED--Give the speed in inches per unit of time for strip charts or time for one revolution for circular charts.

<sup>1.</sup> Completion of TVA 10581-31 also required (see B31.0).

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84 REV NO. REV DATE

Lile 24 - CHART MARKING--Designate the graduations such as UNIFORM, SQUARE ROOT, THERMOCOUPLE TYPE, and markings required on the chart, such as "time every 2 hours."

Line 26 - ACCURACY--Enter "See loop data sheet No. XX." (See Section Bl...0)

Line 32 - RESPONSE TIME--Enter the requirement such as "2 seconds full scale."

Line 34 - OVERLOAD--Enter the magnitude and time duration of a possible overload of the input signal.

Line c = (LANTITY TYPE=-1f line 35 was marked "yes" enter the quantity and type (DPDT, SPDT, etc.) of switches required, otherwise enter "NA."

Line 37 - CONTACT RATING--If line 35 was marked "yes" enter the required contact rating.

Lire 39 - INPUT SIGNAL--Enter the range and type of input such as "4-20 ma DC" or "type E thermocouple."

line 40 - INFUT IMPEDANCE--Enter the minimum or maximum impedance as applicable.

Columns - The columns can accommodate listing more than one recorder on one page. The recorders must all be the same type Do not mix recorders with different types of inputs or different sizes and types of charts.

ITEM NO. -- This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number.

QTY--Enter the quantity of units with this number.

NO. OF PENS--Enter the number of inputs. If this is a scanning type, multirecord recorder, change "PENS" to "PTS."

SCALE--Give the minimum and maximum scale values.

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84

REV NO.

# B10.0 ALARM SWITCHES (TVA-10581-10)1

The first eleven lines should be filled out in accordance with the instructions in section B1.0.

- Line 13 CONDUIT CONN--Enter the conduit connection size.
- Line 14 ELEC TERM--Enter the type of electrical termination desired such as screw terminals.
- Line 15 SWITCH TYPE--Enter the type of switch output desired such as relay contact, AC output, or solid-state DC or AC switch output.
- Line 16 INTEGRAL ALM LT--Mark "yes" or "no" for an integral alarm light. If "yes," designate the color.
- Line 17 SUPPLY POWER--Enter the power available such as 117V 60 Hz 19.
- Line 18 ISOLATION--Indicate if isolation is required between inputoutput, input-supply, output-supply, or each one from ground.
- Line 19 INPUT SIGNAL--Enter the input signal range (e.g., 4-20 mA, 1-5 Vdc).
- Line 20 AMBIENT TEMP--List the ambient temperature limits of the area where the units will be mounted. If device is designated as Class 1E refer to section B30.0 before completing this form.
- Columns The columns can accommodate listing more than one alarm switch per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number.

QTY--List the quantity of units with this number.

1. Completion of TVA 10581-31 also required (see B31.0).

IVΛ

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD D8-E18.3.5

ORIG ISSUE: 5-15-84 REV NO: REV DATE:

SWITCH - QTY and FORM--Give the number of switches in each instrument and the configuration of the poles such as 1 - DPDT or 2 - SPST.

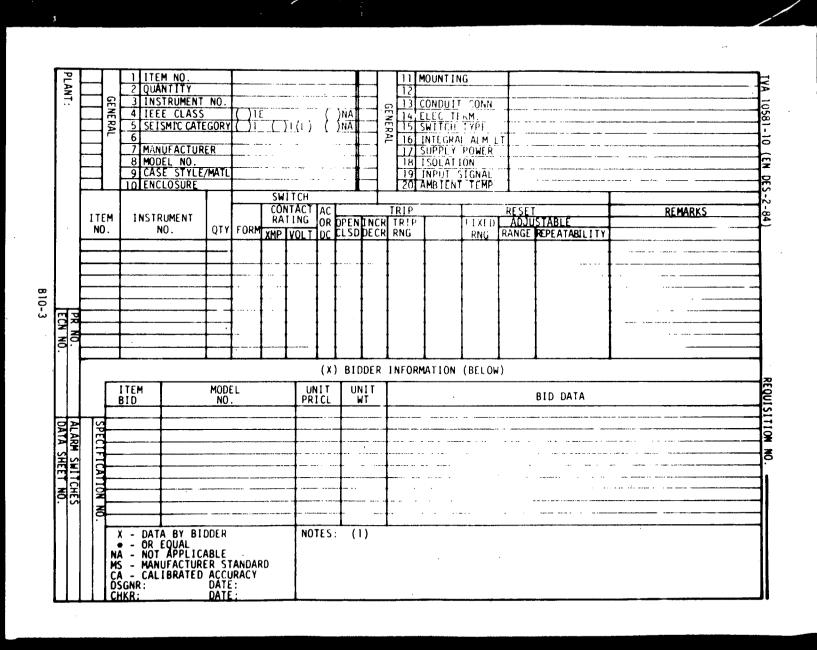

SWITCH - CONTACT RATING - AMP, VOLT, and AC or DC--Specify the required contact rating for the service such as 0.1, 140, DC or 5, 120, AC.

TRIP, OPEN CLOSE, INCR DECR--Specify actuation condition.

TRIP, TRIP RANGE--Specify the trip range in engineering units in terms of the process variable (psig, gpm, deg F, etc.). (Trip range must include repeatability requirements.)

RESET, FIXED RANGE--Enter the range in which reset must occur. Specify the reset range in terms of the process variable. If adjustable reset is required enter "NA."

RESET, ADJUSTABLE, RANGE, REPEATABILITY--If reset must be field adjustable, specify the required reset range and repeatability. Otherwise mark "NA."

# B12.0 DIFFERENTIAL PRESSURE INDICATING SWITCHES (TVA-10581-12)

The first ten lines (except line 3) should be filled out in accordance with the instructions in section B1.0. Fill out the balance of the sheet as follows:

- Line 3 INDICATING--Specify whether switch is indicating or not by checking the appropriate blank.
- Line 12 WINDOW MATL--Check the required window material if Line 3 was marked "yes".
- Line 13 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 14 CONDUIT CONN--Give the conduit connection size.
- Line 15 ELEC TERM--Give the type of electrical termination desired such as screw terminals.
- Line 16 SWITCHES--Mark "yes" if switches are required, "no" otherwise.
- Line 17 INDICATOR ACCURACY--Enter the required accuracy as a percent of full scale if linear or engineering units if square root scale. A reasonable standard for linear scales is ±1 percent.
- Line 19 % OVERRANGE--Enter the maximum overrange the unit must withstand as a percent of full scale without a change in calibration. "Full static pressure" is often available and required.
- Line 20 FLUID--Enter the material in contact with the element, such as raw water or condensate.
- Line 21 PROCESS CONN--Enter the size and type of the process connection.
- Line 22 PULSATION DAMPING--Mark "yes" if pulsation damping is required, otherwise mark "no."
- Columns The columns can accommodate listing more than one switch per page. The parentheses at the tops of the several columns are for footnote numbers to designate units of measurement.
- 1. If used with flow element Form TVA 10581-31 must be completed (see B31.0). B12-1

INSTRUMENTATION AND CONTROLS GROUP:

Preparation of Data Sheets for Purchase Requests TITLE:

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84

REV NO. REV DATE:

ITEM NO. -- This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number.

OTY--Enter the quantity of units with this number.

DIFF RANGE--Enter the range of differential pressure that will be input to the differential pressure indicator/ switch for 0 to 100-percent full-scale. If the switch is used for liquid level, indicate whether wet leg or dry leg and give the distance between taps.

SERVICE - SCALE--Give the minimum and maximum values on the dial.

SERVICE - SCALE TYPE--Enter the type of scale required (linear, square root, etc.).

SERVICE TEMP MAX F and PRESS MAX--Enter the maximum temperature and pressure of the measured variable at the instrument. (Remember condensate legs prevent process temperatures from reaching the instrument.)

SWITCH - QTY and FORM--Enter the number of switches in each instrument and the configuration of the poles such as 1 - DPDT or 2 - SPST. If there are two or more switches with different characteristics shown in the subsequent columns, such as contact rating ac vs dc or action required at different set points, use a separate adjacent line for each switch. If switches are not required, enter "NA."

SWITCH - CONTACT RATING - AMP, VOLT, and AC or DC--Enter the contact rating for the service such as 0.1, 140, DC or 5, 120, AC. This may require both minimum and maximum contact ratings in order to satisfy both electrical and mechanical requirements. If switches are not required, enter "NA."

TRIP, OPEN CLOSE, INCR DECR, RANGE--Specify switch trip condition and range (in engineering units) under which trip must occur in terms of the process variable (gpm, ft/sec, psid, etc.). Trip range must include repeatability. Enter "NA" if no switches are required.

RESET, FIXED, RANGE--Enter the range (in engineering units) in which reset must occur in terms of the process variable. Enter "NA" if switches are not required.

GROUP: INSTRUMENTATION AND CONTROLS

#### B13.0 TEMPERATURE SWITCHES (TVA-10581-13)

The first eleven lines (except line 3) should be filled out in accordance with the instructions in section B1.0. Fill out the balance of the sheet as follows:

- Line 3 INDICATING--Mark "yes" . I an indicating switch is required, otherwise mark "no."
- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, then mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 13. CONDUIT CONN--Enter the conduit connection size.
- Line !4 ELEC TERM--Enter the type of electrical termination desired, such as screw terminals.
- Line 15 SWITCH TYPE--Enter the type of switch desired. (Mercury is not allowed in nuclear plants.)
- Line 16 ACCURACY--Enter the required accuracy as a percent of full scale. A reasonable standard is ±1 percent.
- Line 17 REPEATABILITY--Enter the required repeatability as a percent of full scale. A reasonable standard is 0.2 percent.
- Line 18 ELEMENT--Enter the type of element, such as bimetallic or liquid filled. If the element is long distance type, refer to element data sheet form TVA-10581-29 and fill it out as a supplement to this sheet. Place the note "see sheet 2" in this space. The supplemental sheet should have the same data sheet number as the sheet but listed as sheet 2.
- Line 19 WELL--If the switch requires a well, refer to the element sheet and fill in the appropriate specifications. Enter "see sheet 2" as above for Line 18. If no well is required enter NA.
- Line 20 PROCESS CONN--Enter the size and type of the process connection.
- Columns The columns can accommodate listing more than one temperature switch per page. The parentheses at the tops of the several columns are on footnote numbers to designate units of measurement.

REV NO.

REV DATE:

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO. -- Give the unique identification (UNID) number.

QTY--Enter the quantity of units with this number.

SERVICE - ADJ RANGE--Enter the range over which the set points can be adjusted. Be sure to specify the units of measurement. If you cannot list these units at the top of the column, then put a number in the parentheses and add the information under a numbered note.

SERVICE - SCALE--Enter scale range if indicating (see line 3), therwise leave blank.

SERVICE - FLUID--Enter the material being monitored.

SERVICE - TEMP MAX--Give maximum design pressure.

SERVICE - PRESS MAX--Give maximum design pressure.

SWITCH - QTY and FORM--Enter the number of switches in each instrument and the configuration of the poles such as 1 - DPDT or 2 - SPST. If there are two or more switches with different characteristics shown in the subsequent columns, such as contact rating ac vs dc or action required at different set points, use a separate adjacent line for each switch.

SWITCH - CONTACT RATING - AMP, VOLT, and AC or DC--Enter the required contact rating for the service such as 0.1, 140, DC or 5, 120, AC. This may require both minimum and maximum contact ratings in order to satisfy both electrical and mechanical requirements.

SWITCH - DEAD BAND - MIN, FIX, and ADJ--This is the switch differential--the difference in measurement between the make and break of the switch contacts. Under "MIN" give the minimum differential required; then check whether this differential should be "fixed" or "adjustable."

SWITCH - ACTION - OPEN CLOSE and INCR DECR--Select the desired switch action such as switch "open" on temperature "increase."

SWITCH - TRIP POINT - PRESS and INCR DECR--Enter the temperature at which the switch action is to occur and choose increasing or decreasing measurement.

#### BI4.0 CONTROL VALVES (TVA-10581-14)

The first eight lines should be filled out in accordance with the instructions in section B1.0. Fill out the balance of the sheet as follows: (If the information is immaterial, write "MS" and place an "X" in the box to the left to indicate the bidder is to fill it in.)

- Line 9 SERVICE--Designate the application in concise, descriptive terms, such as heater 4 LCV and air preheater TCV.
- Line 10 ACTION/INPUT SIGNAL--Enter the valve action, such as throttling, off-on, 3-way pressure reducing, back pressure, or relief. Also, list the input signal from the controller, such as 3 to 15 psig, 4 to 20 mAdc or self op (self operated).
- Line 11 LINE SIZE/SCHEDULE/MAT'L--Enter the nominal line size, schedule, and pipe material of the line in which the value will be used. If schedule is unknown or special, give wall thickness or ID.
- Line 12 MAX LINE PRESS (PSIG) -- Designate the <u>design pressure</u> for the line.
- Line 13 MAX ... (VLV CLOSED)--Designate the maximum differential pressure that may occur. It is usually at the time the valve is closed.
- Line 14 MAX TEMP & RADIATION--Enter the maximum design temperature and the maximum total integrated radiation expected.
- Line 15 SIZE/STYLE--Designate the body size and style only if necessary. Otherwise mark "MS" and have the bidder specify.
- Line 16 ANSI CLASS/MATERIAL--Enter the ANSI class and material for the body as required. Otherwise, mark "MS" and have the bidder specify.
- Line 17 END CONNECTIONS--Designate the desired end connection, such as screwed, socket weld, flanged, or butt weld.
- Line 18 BONNET TYPE--Designated the bonnet type as required; otherwise mark "MS" and have the bidder specify. Specify extension and finned type or bellows sealed when required.
- Line 19 PACKING--If not "MS," specify any special packing or bellows sealed when required.
- Line 20 LEAKOFF CONNECTIONS--Designate where leakoff connections are to be made, if required; otherwise mark "NA."

  B14-1

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84

REV NO:

Line 21 - MAX ALLOW SOUND LEVEL (dBA)--Enter max allowable sound level dBA 3 feet from pipe and 3 feet downstream of the valve outlet.

- Line 22 FLOW CHARACTERISTIC--Specify the desired characteristic such as linear, equal percentage, parabolic, quick opening.
- Line 23 MATERIAL--Enter the material such as hardened stainless steel, stellite, or MS.
- Line 24 NO. OF PORTS/PORT SIZE--Designate single or double ports and whether full size, reduced trim, or MS.
- Line 25 GUIDING--Designate any special requirements, such as stellite or MS.
- Line 26 SPECIAL TRIM--Designate any special requirements, such as stellite or MS.
- Line 27 SEAT LEAKAGE (ANSI/FCI 70-2) CLASS--Designate the seat leakage requirements by class in accordance with ANSI/FCI 70-2 or mark "MS."
- Line 28 TYPE--Designate the type of actuator such as diaphragm and spring, double acting cylinder, electric motor operated, electric solenoid, or electrohydraulic.
- Line 29 SIZE & STROKE--Designate any special features, otherwise mark "MS."
- Line 30 SUPPLY--Designate the range of motive power such as the available air pressure if pneumatic and the voltage and frequency if electric.
- Line 31 FAILURE POSITION--Designate open, closed, or last position.
- Line 32 MANUFACTURER & MODEL--For the positioner, when supplied, give the manufacturer and model number desired, otherwise mark "MS" and have the vendor supply the information.
- Line 33 BYPASS/GAUGES--Specify "yes" or "no" and the number of gauges required. Remember that if the range of operation of the spring and diaphragm is significantly different from the control signal, the bypass and gauges are useless.

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84 REV NO. REV DATE:

- Lines 34 & 35 FOR INPUT OF VALVE SHALL BE--These two lines in conjunction with line 31 define the true operational operational characteristics of the valve. Specify that the valve shall be opened or closed under inputs of minimum and maximum values of the input signal. For instance, with a failure position of closed, for an input signal of "3 psi," valve shall be "open." This describes a valve common in heating applications.
- Line 36 FILTER RGLTR--For an accessory item specify when a filter-regulator is required. A typical standard is Fisher 67FR-35. This has a metal filter element and a 0- to 30-psig output gauge.
- Line 37 SUPPLY GAUGE--If a supply gauge is required enter "yes" and indicate location (i.e., "separate" or "integral" {if supplied as an integral part of the regulator]). An integral supply gauge shall be specified for all valves used for "on-off" service.
- Line 38 LIMIT SWITCHES--Designate any required limit switches such as "DPDT each limit" or "SPDT open limit."
- Line 39 L.S. CONTACT RATING--Designate the required contact rating on the limit switch, such as "0.1 ampere, 140Vdc" or "5 amperes, 120V, 60Hz." This may require both minimum and maximum contact ratings in order to satisfy both electrical and mechanical requirements.
- Line 40 SOLENOID VALVE--Designate the manufacturer and model number of the desired solenoid valve. Designate "yes" if bidder is to supply his standard valve or "no" if not required.
- Line 41 S.V. COIL VOLTAGE--Be certain to designate the operating voltage available for the solenoid valve.
- Line 42 MANUAL OVERRIDE--Designate what manner of manual override is required, if any.
- Line 43 Although this line is blank, this should be used for special conditions. For instance, if a controller is to be mounted on this valve, use this space to reference the data sheet where the controller is described.
- Line 44 FLOWING MEDIUM--Enter the fluid flowing. Be specific such
   as "saturated steam" (and its quality), "raw cooling water,"
   or "instrument air."

ORG ISSUE: 5-15-84

REV NO: REV DATE:

- Line 45 SIZING CONDITIONS--These are the column headings for the sizing conditions at maximum, normal, and minimum flow.
- Line 46 FLOW RATE--Enter the maximum and minimum controlled flow
- Line 47 PRESSURE (PSIA)  $(P_1)$ --Enter the operating absolute pressures under the maximum, normal, and minimum flow conditions.
- Line 48 TEMPERATURE (F):-Enter the operating temperatures under the maximum, normal, and minimum flow conditions.
- Line 49 \( \Delta P \) (PS1)--Enter the operating differential pressures available for use by the valve under the maximum, normal, and minimum flow conditions.
- Line 50 CV (CALC)--Enter the calculated CV for both the maximum and minimum flow conditions (to be completed by the procuring branch).
- Line 51 CV (ACTUAL) -- This is for the bidder to show the actual CV of the valve he is offering.
- ${
  m NOTE}(2)$  Mark "yes" if the outlet pressure  $(P_2)$  is ever greater than the inlet pressure  $(P_1)$ , and mark "no" if not. If "yes" is marked, the following should be given in the notes section.
  - (a) The value of the inlet and outlet pressure (PSIA) that gives the maximum pressure drop in the reverse direction.
  - (b) The leakage requirements in the reverse direction.
  - (c) Any flow requirements in the reverse direction.

# B16.0 DIFFERENTIAL PRESSURE TRANSMITTER (ELECTRONIC) (TVA-10581-16)

The first eleven lines should be filled out in accordance with the instructions in section B1.0.

#### NOTE

This data sheet is to be used for differential pressure transmitters only. For absolute or gauge pressure transmitters, use TVA-10581-23.

- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, then mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 13 CONDUIT CONN--Enter the conduit connection size.
- Line 14 POWER SUPPLY--List the available power supply specifications including tolerances. For example 24  $\pm$  2Vdc (loop).
- Line 15 TRANS TYPE--Mark "2-wire" or "4-wire."
- Line 18 POWER REQ--Enter the maximum AC power available in watts (if applicable).
- Line 20 ELEC CONN--Enter the type electrical connections desired, such as screw terminals.
- Time 21 PROCESS CONN--Enter the size and type of process connection, such as 1/4" 18 NPT F.
- Line 22 WS PARTS MATL--Enter the material of construction for parts in contact with process fluid, such as 394SS.
- Line 23 OVERRANGE PROT--Enter the amount of overrange required without damaging the transmitter. If not significant or none is required, write "MS."
- Line 24 3-VALVE MANIFOLD--If a three-valve manifold is required mark "yes"; also list ASME Code Class (line 6).
- Line 25 VIBRATION--Enter the estimated acceleration and frequency of anticipated vibration. Mark "NA" if vibration is insignificant.

<sup>1.</sup> Completion of Form TVA 10581-31 also required (see B31.0).

Line 30 - AMBIENT TEMP--Enter the ambient temperature limits of the area where devices will be mounted. If the device is designated as Class IE, refer to section B30.0 before completing this form.

Line 39 - OUTPUT/GRD ISOL--Mark "yes" if output ground isolation is required, "no" or "MS" if not.

Line 41 - RESPONSE TIME--Enter the requirement, such as "2 seconds full scale."

Line 48 - REMOTE AMPL--Mark "yes" if the amplifier must be mounted remote from the detector, otherwise mark "no."

Line 51 - ZERO ADJ--Designate the required zero scale adjustment as plus or minus percent of span or MS.

Line 53 - SPAN ADJ--Enter the minimum and maximum span adjust range in engineering units.

Line 54 - INTEG SQ RT--If an integral square root converter is required, mark "yes," otherwise mark "no."

Line 55 - PULSE DMP ADJ--If adjustable pulsation damping is required
mark "yes," otherwise mark "no."

Line 58 - LOAD IMPD RANGE--Show the load impedance range that the transmitter might be required to operate in as a result of anticipated future loop modifications i.e., addition or removal of an instrument from the loop. If no future loop modifications are anticipated, enter "see Loop Data Sheet (No.)."

Line 60 - OUTPUT SIGNAL--Enter the output signal such as 4 to 20mAdc.

Columns - The columns can accomodate listing more than one transmitter per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number.

QTY--Enter the quantity of units with this number.

DIFF PRESS RANGE--Enter the minimum and maximum points on the range and include units (psid, IN WC, etc.).

## B17.0 ELEC TO ELEC INDICATING CONTROLLER (TVA-10581-17)

The first eleven lines should be filled out in accordance with the instructions in section B1.0.

- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 13 CONDUIT CONN--Enter the connection size for the conduit.
- Line 14 POWER SUPPLY--Enter the power available such as 117V 60Hz 10.
- Line 15 ELEC CONN--Enter the type electrical connections desired, such as screw terminals.
- Line 16 POWER REQ--Enter the maximum power required in watts.

  This would usually be listed by the bidder.
- Line 17 TRANS PWR SUP--If a transmitter power supply is required mark "yes" and list the supply voltage required, otherwise mark "no."
- Line 21 AMBIENT TEMP--Enter the ambient temperature limits of the area where the units will be mounted. If the device is designated as Class 1E (line 4), refer to section 130.0 before completing this form.
- Line 22 AUTO-MAN SW--Mark "yes" if automatic-manual switch is required, "no" if it is not.
- Line 23 DEVIATION METER--Mark "yes" if a deviation meter is required, "no" if it is not.
- Line 24 DEVIATION ALARM--Mark "yes" if a deviation alarm is required, "no" if it is not.
- Line 25 PROCESS IND--Mark "yes" or "no".
- Line 26 OVERRANGE PROT--Enter the amount of overrange required without damaging the instrument. If not significant or none is required, write "MS."

<sup>1.</sup> Requires completion of form TVA 10581-31 (see section B31.0).

- Line 27 LEGEND PLATE--List the units  $\alpha {\bf f}$  measure, such as gpm and multiplier, if used.
- Line 28 INDIC LIGHTS--Mark "yes" and color if indicator lights are required, "no" if they are not.
- Line 29 SET-PT SCALE LG--Enter minimum scale length required for the set-point scale.
- Line 31 IND ACCURACY--Enter the required process indicator accuracy in engineering units. If no indicator is required enter "NA".
- Line 32 SETPOINT ACCURACY--Enter the required accuracy of the setpoint:
- i.ine 33 DEAD BAND--Give the maximum tolerable range through which an input can be varied without initiating change in output as percent of span. If deadband is required for control stability, enter the adjustment range (in percent of input span).
- Line 34 DEAD TIME--Give the maximum interval of time acceptable between initiation of an input change and the start of the resulting response.
- Line 39 CONTROL ACTION (2)--Mark "Direct" or "Reverse."
- the 40 PROP BAND ADJ--Enter the proportional band adjustment desired, such as 1 to 300 percent.
- Line 41 RESET ADJ--Enter the reset rate adjustment desired, such as 0.5 to 25 repeats per minute.
- Line 42 RATE ADJ--Enter the derivative rate adjustment desired, such as 0.5 to 25 minutes.
- Line 43 ANTI WINDUP--All electronic controllers should have anti-reset windup as a standard feature.
- Line 44 REMOTE SETPOINT--Mark "yes" if a remote setpoint capability
   is required.
- Line 45 INPUT/GRD ISOL--Mark "yes" if input ground isolation is required, "no" or "MS" if not.
- Line 46 INPUT/OUT ISOL--Mark "yes" if input and output isolation is required, "no" or "MS" if not.

### B18.0 PNEUMATIC CONTROLLER (TVA-10581-18)

The first eleven lines should be filled out in accordance with the instructions in section B1.0.

- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, then mark an  $\beta$ " in the box to the left to indicate the bilder is to fill it in.
- Line 13 INDICATING--Mark "yes" or "no."
- Line 15 SUPPLY AIR--Enter the actual supply air, such as 70 to 100 psig.
- Time 16 IN-OUT CONN--Give the connection size for the input and output supply lines, such as 1/4" NPTF.
- Line 17 INDIC SCALE LG--Enter the desired length for indicator scale (if applicable).
- Line 18 AIR CONSUMED--Enter the maximum amount of air usage, such as 0.5 SCFM, or place an "X" to the left for the manufacturer to specify.
- Line 19 AMBIENT TEMP--Enter the ambient temperature limits of the area where the units will be mounted,
- Line 21 AIRSET--Mark "yes" if air set is to be supplied by vendor, "no" if not required.
- Line 22 SUPPLY GAUGE--Mark "yes" if supply gauge is required, "no" if not required.
- Line 23 OUTPUT GAUGE--Mark "yes" if output gauge is required, "no"
   if not required.
- Line 29 MOUNTING KIT--Designate if an accessory mounting kit is required for special mounting, such as on a valve.
- Line 30 AUX NAMEPLATE--Designate if an auxiliary nameplate is required and what it will have on it. If more space is required, use notes.
- 1. Requires completion of Form TVA 10581-31 (see B31.0).

GROUP: INSTRUMENTATION AND CONTROLS

- Line 31 ELEMENT TYPE--Enter the type of element such as bellows, bourdon, helical, or diaphragm.
- Line 35 OVERRANGE PROT--Enter the amount of overrange required without damaging the unit. If not significant or none is required, write "MS."
- Line 39 WS PARTS--Enter the material required for the socket and bourdon element, such as bronze, steel, or 316SS.
- Line 42 HYSTERESIS--Maximum incremental hysteresis difference between the upscale and downscale indications of the measured signal during a full-range traverse for a given input, such as 0.2 percent of span.
- Line 45 RESPONSE TIME--Enter the requirement, such as "2 seconds
  tull scale."
- Line 46 SENS.TIVITY--Enter the required sensitivity. A reasonable standard is 0.1 percent of span.
- Line 47 SPAN ADJ--Enter the minimum span adjustment as percent if required, otherwise "MS".
- . Line 49 ZERO ADJ--Designate the required zero scale adjustment as plus or minus percent of span or "MS".
- Line 51 AUTO-MAN TRANS--Mark "yes" if an automatic-manual transfer switch is desired, "no" if not required.
- Line 52 CONTROL ACTION--Mark "direct" or reverse."
- Line 53 MODES OF CONT--Enter the operation modes such as "P" for proportional, "PI" for proportional plus integral, "PD" for proportional plus derivative, and "PID" for proportional plus integral plus derivative.
- Line 54 PROP BAND ADJ--Enter the proportional band adjustment desired, such as 1 to 300 percent.
- Line 55 RESET ADJ--Enter the reset rate adjustment desired, such as 0.5 to 25 repeats per minute.
- Line 56 RATE ADJ--Enter the derivative rate adjustmen desired, such as 0.5 to 25 minutes.
- Line 57 OUTPUT SIGNAL--Give the output signal such as 3 to 15 psig.

The first eleven lines should be filled out in accordance with the instructions in section B1.0. Fill out the balance of the sheet as follows:

- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, then mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 13 CONDUIT CONN--Enter the conduit connection size if there is an electrical connection, otherwise mark "NA."
- Line 14 NOM POWER SPLY--117V, 60Hz is standard on this data sheet.

  If another voltage is to be supplied by TVA, blank out the 117" 60Hz and fill in the correct value.
- Line 15 SUPPLY VOLT RNG--Enter the range of input power supply voltage variations.
- Line 16 ELECTRICAL CONN--Enter the type electrical connection desired, such as screw terminals.
- Line 17 FUSE ALARM--Mark "yes" or "MS."
- Line 18 MULT OUTPUT--For multiple loops mark "yes" or "no." If "yes," note how many.
- Line 19 SHORT CIR PRO--Designate if short circuit protection is needed.
- Line 21 AMBIENT TEMP--Give the ambient temperature limits of the area where the units will be mounted. If device is designated as class 1E refer to paragraph B30.0 before completing this form.
- Line 22 AMB TEMP EFF--Give the maximum deviation tolerable with changes in ambient temperature, such as ±1 percent per 100 F.
- Line 24 EFFICIENCY--Enter the required efficiency in percent or mark "MS."
- Line 28 INPUT/GRD ISOL--Mark "yes" if isolation between the input and ground is required; mark "no" if not, or "MS."

<sup>1.</sup> Requires completion of form TVA 10581-31 (see B31.0).

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

5-15-84

ORIG ISSUE: REV NO. REV DATE

Line 29 - IN/OUTPUT ISOL--Mark "yes" if isolation between the imput and output is required; mark "no" if not, or "MS."

- Line 30 OUT/GRD ISOL--Mark "yes" if isolation between the output and ground is required; mark "no" if not, or "MS."
- Line 31 OUTPUT RIPPLE--Enter the maximum amount of output ripple that can be tolerated as a percent of output, such as <1 percent of output.
- Line 32 OUTPUT--Enter the maximum and minimum current at the maximum and minimum voltage such as 10mA at 84V to 50mA at 76V. If the voltage is of not significance, simply give the desired output current, such as 10 to 50mAdc or 4 to 20mAdc into the load of 600 ohms.
- Line 36 REGULATION--Enter the maximum tolerable output voltage deviation with the expected load change.
- Line 37 ONV PROT--If overvoltage protection is required, specify "yes" and the setpoint, otherwise mark "MS."
- Line 39 SUP VOLT EFF--Enter maximum tolerable deviation of output caused by changes in supply voltage, such as ±10 percent change in supply voltage causes ±.01% change in output.
- Columns The columns can accommodate listing more than one power supply per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO. -- Enter the unique identification (UNID) number.

QTY--Enter the quantity of units with this number.

REMARKS--List any accessories that may be needed. Be sure to give complete details, and if more room is needed, use footnotes.

MODEL NO. and UNIT PRICE--These columns are to be filled in by the vendor when he submits his proposal.

#### B20.0 ELECTRICAL INDICATORS (TVA-10581-20)1

The first ten lines (except line 6) should be filled out in accordance with the instructions in section B1.0. Fill out the balance of the sheet as follows:

- Line 6 ORIENTATION--List "vertical" or "horizontal" (or "NA" for circular meters).
- Line 12 UNIT WEIGHT--Mark "hark," or if knowledge of the weight is required, mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 13 CONDUIT CONN--Enter the conduit connection size, if applicable.
- Line 14 ELEC CONN--Enter the type electrical connections desired, such as screw terminals.
- Line 15 INTERNAL ILLUM--Mark "yes" if internal illumination is required, "no" if it is not required.
- Line 16 DISPLY TYPE--Mark either "Analog" or "Digital."
- Line 17 SCALE LENGTH--List the length of scale desired (analog meter only) enter "NA" if meter is digital type.
- Line 18 MIN RESOLUTION--Enter the minimum acceptable resolution in engineering units.
- Line 19 DIGIT TYPE/SIZE--Mark "LED" (light emitting diode) or "LCD" (liquid crystal display) for digital meters; leave blank if meter is analog type (see line 16). Enter the required digit SIZE.
- Line 20 BRIGHTNESS CNTL--Mark "yes" if a brightness control is required (digital meter only); mark "no" if otherwise or if meter is analog type.
- Line 21 ADJ LAG FEATURE--Mark "yes" if an adjustable lag feature (damping) is required, mark "no" otherwise.

<sup>1.</sup> Requires completion of Form TVA 10581-31 (see B31.0).

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

5-15-84

ORIG ISSUE: REV NO: REV DATE

- Line 23 BCD OUTPUT--Mark "yes" if a binary coded decimal (BCD) output is required; mark "no" otherwise.
- Line 24 BURDEN DATA--Enter the maximum permissible power consumption in volt-amperes for that instrument such as for ac ammeter 5 amperes: 0.5 VA, 0.5 power factor lagging.
- Line 25 AMBIENT TEMP--Enter the ambient temperature limits of the area where this equipment will be installed. If device is designated as Class IE (line 4) refer to paragraph B30.0 before completing this form.
- one 27 EXT SENSOR--Enter any special sensor to which the meter may be connected such as RTD or type E thermocouple.
- Line 28 INPUT IMPED--Enter the required maximum, minimum, or range in ohms of the input impedance such as 1000 ohms maximum, 500 ohms minimum, or 500 to 1000 ohms. If the information is immaterial mark "MS" and put an "X" in the box to the left.
- Line 30 VOLTAGE TO GRD--Enter the voltage between the meter and ground, such as 600V.
- Line 33 OVERRANGE CAP--The maximum amount of overrange the instrument must withstand without damage. An acceptable value is 120 to 150 percent of input.
- Line 37 SPAN ADJ--Mark the required span adjustment as percent of span. If information is immaterial, write "MS" and place an "X" in the box to the left.
- Line 38 ZERO ADJ--Designate the required zero scale adjustment as plus or minus percent of span or "MS."
- Line 39 VIBRATION--Specify the acceleration and frequency or "NA" if insignificant.
- Columns The columns can accommodate listing more than one vertical scale indicator per page.

ORIG ISSUE: 5-15-84

REV NO: REV DATE:

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number.

QTY.--Enter the quantity of units with this number.

SCALE LEGEND--Enter the required scale legend.

RANGE--Enter the minimum and maximum points on the scale.

SCALE TYPE--List the type of scale required (i.e., linear, SQR RT, LOG, LN, or special). Explain "Special" in footnotes.

INPUT SIGNAL--Enter input signal, such as 4 to 20mAdc, type E thermocouple, or 115Vac.

REMARKS--Enter any accessories that may be needed. Be sure to give complete details, and if more room is needed, use footnotes.

MODEL BID and UNIT PRICE--These columns are to be filled in by the vendor when he submits his proposal.

ELECTRICAL DESIGN STANDARD DS-E18.3.5

J-11-84

ORIG ISSUE REV NO. REV DATE:

# B21.0 BIMETAL THERMOMETERS AND MATING WELLS (TVA-10581-21)

The first ten lines should be filled out in accordance with the instructions in section B1.0.

- Line 14 DESIGN PRESS--Enter the system design pressure.
- Line 15 FLUID--Enter the material in contact with the element or well, such as raw water or condensate.
- Line 21 WELL TYPE--Mark "straight" or "tapered" as applicable.
- Line 22 EXTERNAL CONN--Enter the size connection for external thread or socket weld.
- Line 24 INTERNAL THREAD--Enter the Size connection for the extension nipple or packing nut.
- Line 25 DIMENSION "A" (U)--Enter the insertion length.
- Line 26 DIMENSION "B" (T)--Enter the lagging extension.
- Line 27 OTHER DIMENSIONS--If it is appropriate, give the size of the hex on the well or the outside diameter of the bar stock.
- tine 30 WS MATL--Enter the materials of construction of the well or the wetted surface parts.
- Line 31 DIAL--The 4-1/2" size dial and black numerals on white background are standard.
- Line 32 ELEMENT TYPE--Enter the type of element such as bimetal.
- Line 36 ACCURACY--Give the accuracy. A reasonable standard is 1 percent of span.
- Line 37 % OVERRANGE--Give the amount of overrange required without damaging the thermometer. If not significant or none is required, write "MS."
- Line 38 REPEATABILITY--Enter the repeatability as a percent of full scale. A reasonable standard is 0.5 percent.
- Line 40 VIBRATION EFF--Specify limits of deviation at what frequency and at what magnitude if required, if not, mark "MS."

ELECTRICAL DESIGN STANDARD D8-E18.3.5

ORIG ISSUE: 5-15-64

REV NO: REV DATE:

Columns - The columns can accommodate listing more than one thermometer assembly or test per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

 $\label{localization} \begin{tabular}{ll} INSTRUMENT NO--Enter the unique identification (UNID) \\ number. Mark all TI's and matching TW's. \end{tabular}$ 

QTY--Enter the quantity of assemblies with this number.

TEMP RANGE--Enter the required temperature range, such as 30 to 130  $\ensuremath{\mathrm{F}}\xspace$  .

FLUID VELOCITY--Enter the maximum velocity in feet per second.

MODEL BID and UNIT PRICE--These columns are to be filled in by the vendor when he submits his proposal.

REV NO:

#### B22.0 LIQUID LEVEL GAUGES (TVA-10581-22)

Lines 1-3 and 5-8 should be filled out in accordance with the instructions in paragraph  $1.1\,\mathrm{L}$ 

- Line 11 MOUNTING--Enter "flanged" (include flange type), "threaded" (include thread type and nipple size) or "butt weld" (include nipple size).
- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, mark an "X" in the box to the left to indicate the bidder is to file it in.
- Line 14 = FLUID--Enter the material in contact with the element, such as raw water or condensate.
- Line 15 MAX PRESS--Give the system design pressure.
- Line 16 MAX TEMP--Give maximum design temperature.
- Line 18 BODY MATL--Give the material of construction for the gauge body.
- Line 20 AMBIENT TEMP--Enter the ambient temperature limits of the area where this equipment will be installed.
- Line 21 VALVE BODY--Enter the material of construction for the gauge valve body.
- Line 22 VALVE BONNET--Enter the type of gauge valve bonnet, such as union or bolted.
- Line 23 VALVE HANDLE--Enter the type of gauge valve handle, such as handwheel.
- Line 24 END CONN--Enter size of end connection, such as 3/4" NPT (male).
- Line 25 VALVE TRIM--Enter the material of construction for the gauge valve trim, such as type 316 stainless steel.
- Line 26 SAFETY CHECK--Mark "yes" if safety ball check is required.

  Mark "no" if ball check is not required.

ELECTRICAL DESIGN STANDARD DS-E18.3.5

5-15-84

ORIG ISSUE: REV NO REV DATE

Line 31 - GAUGE TYPE-~Enter type of gauge required, such as reflex or transparent. Most gauges are tubular as opposed to "flat glass." If "flat glass" is desired, say so.

Line 33 - GAUGE CONN--Enter type of connection required--flanged, screwed, end, side, or back-connected. Also list size, such as 3/4" NPT (female).

Line 34 - DRAIN--Enter drain size, such as 1/2" NPT, if required.

Line 35 - VENT--Enter vent size, such as 1/2" NPT, if required.

Line  $3\sigma$  - TANK CONN--Enter tank or vessel connection size and type, such as  $374^{\circ\prime\prime}$  male.

Line 37 - GLASS--List type of glass required, high pressure or tempered borosilicate.

Line 39 - PROTECTOR--Mark "yes" if protector is required; if not required, mark "no."

Columns - The columns can accommodate listing more than one liquid level gauge per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number.

QTY--Enter the quantity of units with this number.

BODY LENGTH--Give the overall length of body.

VIS LENGTH--Give the length of visible glass.

CONN CENTERS—Give the distance between the centerlines of connections.

REMARKS--List accessories such as end steams, scales, or support brackets. Be sure to give complete details, and if more room is needed use footnotes.

MODEL BID and UNIT PRICE--These columns are to be filled in by the vendor when he submits his proposal.

REV DATE

### B23.0 PRESSURE TRANSMITTER (ELECTRONIC) TVA-10581-23)1

The first eleven lines should be filled out in accordance with the instructions in paragraph 1.1 (Do not use this data sheet to specify a differential pressure transmitter; use data sheet TVA 10581-16.)

- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 13 CONDUIT CONN--Enter the conduit connection size for the conduit = 3/4 NPT-F is typical.
- Line 14 POWER SUPPLY--Enter the power supply voltage range. If transmitter is 2-wire, also enter loop.
- Line 17 POWER REQ--If transmitter is 4-wire enter the maximum power required in warts. This would usually be listed by the bidder.
- Line 18 ELEC CONN--Enter the type electrical connections desired, such is screw terminals.
- Line 19 PROCESS CONN--Enter the size and type of process connection, such as 1/4" 18 NPT-F.
- Line 20 WS PARTS MATL--Enter the material of construction for parts in contact with process fluid, such as 304SS.
- Line 21 OVERRANGE PROT--Enter the amount of overrange required without damaging the transmitter. If not significant or none none is required, write "MS."
- Line 22 VIBRATION--Enter the estimated acceleration and frequency, or "NA" if insignificant.
- Line 25 AMBIENT TEMP--Enter the ambient temperature limits of the area where the units will be mounted. If device is designated as Class IE (line 4) refer to section B30.0 before completing this form.
- 1. Requires completion of form TVA 10581-31 (see B31.0).

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84

REV NO.

Line 37 - OUTPUT/GRD ISOL--Mark "yes" if output ground isolation is required, "no" or "MS" if not.

Line 40 - RESPONSE TIME--Enter the requirement, such as "2 seconds full scale."

Line 41 - PULSATION DAMPING--Mark "yes" if pulsation damping is required, otherwise mark "no."

Line 44 - SPAN ADJ--Enter the minimum span adjustment as percent of range if required, otherwise "MS."

Line 45 - ZERO ADJ--Designate the required zero scale adjustment as plus or minus percent of range or "MS."

Line 49 - LOAD IMPD RANGE--Enter the desired range of loop impedance that may be required for future addition or deletion of instruments from the loop. If it is not of major concernenter "MS."

Line 50 - OUTPUT SIGNAL--Enter the required output signal, such as 4 to 20mAdc

Columns - The columns can accommodate listing more than one pressure transmitter per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number.

QTY--Enter the quantity of units with this number.

PRESS RANGE--Enter the minimum and maximum points of range. Also enter the units (PSIG, PSIA, etc).

DESIGN PRESS--Enter the maximum design pressure.

REMARKS--List accessories such as siphons or diaphragm seals. Be sure to give complete details. If more room is needed use footnotes.

MODEL BID and UNIT PRICE--These columns are to be filled in by the vendor when he submits his proposal.

REV NO.

### B24.1 SOLENOID VALVES (TVA-10581-24)

The first eleven lines should be filled out in accordance with the instructions in paragraph 1.1. Fill out the balance of the sheet as follows: (If the information is immaterial, write "MS" and place an "X" in the bex to the left.)

- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, then mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 13 ANSI CLASS--Enter the ANSI class for the body material required. Otherwise, mark "MS".
- Line 14 CONDUIT CONN--Enter the conduit connection size.
- Line 15 ELEC CONN--Enter the type of electrical termination desired, such as 18" 1 ad wire.
- Line 16 POWER SUPPLY--Designate the coil voltage and frequency (or DC).
- Line 17 POWER REQ--Designate the maximum power (watts) available if it is a limiting factor, otherwise mark "MS" and have the vendor supply the information.
- Line 18 HEAT RISE--If the heat rise is of concern, designate the maximum, otherwise mark "MS."
- Line 19 RADIATION--Designate the type and amount of radiation expected either as an average rate or as an integrated dose. If device is designated as Class IE (line 4), refer to section B30.0 before completing this entry.
- Line 20 AMBIENT TEMP--Enter the ambient temperature limits of the area where this equipment will be installed. If device is designated as Class IE (line 4) refer to section B30.0 before completing this form.
- Line 21 BODY MATL--Designate the desired body material.
- Line 22 WS PARTS MATL--Designate any special wetted surface parts materials; otherwise mark "MS."
- Line 23 COIL INS--Designate the desired coil insulation class, such as high temperature class H.

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84 REV NO.:

REV DATE:

Line 24 - DUTY CYCLE--Designate continuous or "MS."

Line 25 - DISC MATL--Designate the disc material if there are special requirements, otherwise mark "MS."

Line 26 - SEAT MATL--Designate the seat material if there are special requirements, otherwise mark "MS."

Line 27 - LEAKAGE--Designate the maximum allowable leakage rate.

Line 28 - ADJ FLOW--Designate if adjustable flow is required by "yes" or "no." If "yes," indicate whether the needle valves are "integral" or "external."

Line 29 - MAN OVERRIDE--Designate whether manual override is required.

 $L_{\rm TRE}/30$  - PILOT OPER--Designate whether the valve can be pilot operated or not.

Line 31 - LINE SIZE/SCHED--Enter the nominal line size and schedule of the line in which the valve will be used. If schedule is unknown or special, give wall thickness or ID.

Line 32 - MAX LINE PRESS (PSIG)--Designate the design pressure for the line.

Line 33 - RMP POSN IND--Designate any required switches such as "DPDT each limit" or "SPDT open limit".

Line 34 - CONTACT RATING--Indicate contact rating of remote position indication switches. If remote indication is not required (see line 33) mark "NA."

Line 36 - FLOWING MEDIA--Designate the fluid being controlled, such as dry air or instrument air.

Line 37 ~ FLOW RATE--Designate the maximum design rate of flow in SCFM or gpm.

Line 38 - INLET PRESS  $(P_1)$  (PSIA)--Designate the maximum inlet pressure to be expected.

Line 39 - PRESS DROP--Designate the maximum allowable pressure drop at the minimum inlet pressure.

Line 40 - MEDIA TEMP--Enter the minimum and maximum temperatures expected for the flowing media.

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84

REV NO:

Columns - The columns can accommodate listing more than one solenoid valve per page.

lTEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO. -- List the unique identification (UNID) number.

QTY--Enter the quantity of units with this number.

NO. OF PORTS--State whether the valve is to have two, three, or four ports.

PRESS RANGE--Enter the minimum and maximum points of range.

DESIGN PRESS--Enter the maximum design pressure.

TAIL POSIT--Designate the position of the valve upon power failure.

END CONN--Designate the type of end connection such as 1/4" NPTF.

 $\mathrm{C}_{\mathrm{V}}$ --Designate the required valve flow constant or mark "MS."

ORIFICE SIZE--Designate the required orifice size if known or mark "MS."

REMARKS--List any special characteristics not specified above. If there is insufficient space, use notes.

MODEL BID and UNIT PRICE--These columns are to be filled in by the vendor when he submits his proposal.

NOTE(1)--Mark "yes" if the outlet pressure  $(P_2)$  is ever greater than the inlet pressure  $(P_1)$ , and mark "no" if not. If "yes" is marked, the following should be given in the "notes" section.

- The value of the inlet and outlet pressures (PSIA) that gives the max pressure drop in the reverse direction.
- (2) The leakage requirements in the reverse direction.
- (3) Any flow requirements in the reverse direction.

### B25.0 ROTAMETERS (TVA-10581-25)

The first nine lines (except line 4) should be filled out in accordance with the instructions in paragraph 1.1. Lines 4 and 10 will be blank.

- Line 11 MOUNTING--Enter "surface" or "line".
- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 14 PIPE CONN/MATL--Enter the pipe connection size and material.
- Lire 15 FRAME STYLE--Enter the frame style, such as "C" for purge meters, or mark "MS."
- Line 16 MULTITUBE PANEL--Enter the multitube panel model number. If none is required, mark "NA."
- Line 17 MANIFOLD CONN--Enter the manifold connection pipe size. If not required, mark "NA."
- Line 18 WS MATL--Enter the materials of construction for parts in contact with the process fluid.
- Line 20 AMBIENT TEMP--Enter the ambient temperature limits of the area where the units will be mounted.
- Line 21 SCALE LENGTH--Enter length of scale.
- Line 22 ACCURACY--Enter the required accuracy. A reasonable standard is 1 percent of span.
- Line 23 FLOAT/MATL--Enter type and material of construction for float.
- Line 24 FLOAT STOPS--Enter the material of construction for float stops or mark "MS."
- Line 25 SEALS/MATL--Enter the type of seal (packing or 0-ring) and the material.
- Line 26 PROT SHIELD--Mark "yes" if protective shield is required.

  Mark "NA" if not required.
- Line 27 INLET VALVE--Mark "yes" if inlet valve is required. Mark "NA" if not required.

IVΑ

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

OHIG ISSUE: 5-15-84 REV NO. REV DATE

Line 28 - OUTLET VALVE--Mark "yes" if outlet is required. Mark "NA" if not required.

Line 29 - VALVE BODY--Enter the material of construction for the valve body.

Line 30 - VALVE SEAT--Enter the material of construction for the valve seat.

Line 31 - ALARM SW RATING--Enter the alarm switch contact rating when alarm is required. Mark "NA" when alarm is not required.

Line 32 - ALARM SW DIFF--Enter the alarm switch differential when alarm is required. Mark "NA" when alaim is not required.

Line 3° - REPRODUCIBILITY--Enter the required reproducibility as a percent of full scale. A reasonable standard is 0.5 percent.

Line 34 - ELEC CONN--Enter the type of electrical connection desired, such as screw terminals.

Line 35 - CONDUIT CONN--Enter the connection size for the conduit.

Line 37 - RGLTR BODY--Enter the material of construction for the regulatory body if regulatory is required. If not required, mark "NA."

Line 38 - RGLTR DIAPH--Enter the material of construction for the regulator diaphragm, such as viton (with stainless steel body) or Buna N (with brass body). If regulator is not required, mark "NA."

Line 39 - RGLTR TRIM--Enter the material of construction for the regulator trim if regulator is required. If not required, mark "NA."

Line 40 - RGLTR TUBING--Enter the material of construction for the regulator tubing if regulator is required. If not required, mark "NA."

Columns - The columns can accommodate listing more than one rotameter per page.

ITEM NO.--This is the contradt item number and will be filled in by procurement personnel.

 $\label{local_intermediate} \textbf{INSTRUMENT NO.--Enter} \ \ \textbf{the unique identification (UNID)} \\ \textbf{number.}$ 

QTY--Enter the quantity of units with this number.

CAPACITY - FLOW--Enter the minimum and maximum rate of flow, such as 2-20.

CAPACITY - UNITS--Enter the units of measurement, such as SCFM, SCFH, or  $\mbox{\rm gpm}.$ 

DIFF PRESS--Enter the maximum pressure drop allowable across instrument.

SERVICE-TEMP--Enter the design temperature of the process.

SERVICE-PRESS--Enter the design pressure of the process.

REMARKS--List accessories such as hose connectors, differential pressure regulator, or combination filter-regulator. Be sure to give complete details, and if more room is needed, use footnotes.

MODEL BID and UNIT PRICE--These columns are to be filled in by the vendor when he submits his proposal.

# R26.0 DISPLACER TYPE (PNEUMATIC) LEVEL CONTROLLER (TVA-10581-26)

The first eleven lines should be filled out in accordance with the instructions in paragraph 1.1.

- Line 12 CASE LOCN--Check "left hand" or "right hand" to indicate on which side of the cage the case should be mounted. A "left hand" case is to the left side of the cage.
- Line 13 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 14 APPLICATION--list the desired application such as liquid level, specific gravity, control, indication, or transmission.
- Line 16 LIQUID--List the liquid to be measured.
- Line 19 SYSTEM TEMP+-List the design temperature of the system.
- Line 20 AMBIENT TEMP--List the ambient temperature limits of the area where the units will be mounted.
- Line 21 BODY MATL--List the cage body material.
- Line 23 OPR PRESS MAX-MIN--List the maximum and minimum cage operating pressure.
- Line 24 OPR TEMP MAX-MIN--List the maximum and mirimum cage operating temperature.
- Line 25 SPGR AT OPR T-P--List the fluid specific gravity at the operating temperature and pressure.
- Line 28 UPPER CONN--List the required time and size of the upper cage connection such as 2" RFF-150 psi, 2" SW, or 1-1/2" NPTF. Also, indicate its orientation: top, side right, side left, or side back.
- Line 29 LOWER CONN--List the required type and size of the lower cage connection such as 2" RFF-150 psi, 2" SW, or 1-1/2".

  NPTF. Also indicate its orientation: bottom, side right, side left, or side back.

GROUP: INSTRUMENTATION AND CONTROLS

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84 REV NO: REV DATE:

Line 30 - ROTATABLE HEAD--Mark "yes" if required, "no" or MS"

Line 31 - AIRSET--Mark "yes" if airset is required, "no" if not required. If "yes," describe what is required such as filter-regulator at 20 psig.

Line 32 - SUPPLY GAUGE--Mark "yes" if supply gauge is required, "no" if not required.

Line 34 - SUPPLY PRESS--List the supply pressure.

Line 37 - SWITCHES - FORM--List the number of contacts required and term such as 2SPDT. If none, mark "NA" or "none."

Line 39 - SW RATING--Enter the switch rating, such as 4 amperes at 110Vac.

Line 40 - MEAS INC - CONTACT--Designate whether contact "opens" or closes" on measurement increase.

Line 51 - DISPLACER DIA--Enter the diameter of the displacer, or "MS."

Line 52 - DISPL LENGTH--Enter the displacer length, or "MS."

Line 53 - DISPL MATERIAL--Enter the displacer material, or "MS."

Line 54 - DISPL ROD LENGTH--Enter the length of displacer rod, or "MS."

Line 55 - DISPL ROD MATERIAL -- Enter material of displacer rod, or "MS."

Line 57 - TORQUE TUBE MATL--Enter material of torque tube, or "MS."

Line 59 - COOLING EXTN--For applications at  $over\ 400\ F$ , enter whether or not air fin extension is required.

Line 61 - ACCURACY--Enter the required accuracy. A reasonable standard is 1/2 percent of span.

Line 62 - HYSTERESIS--Maximum incremental hysteresis difference between the upscale and downscale indications of the measured signal during full range traverse for a given input, such as ±0.2 percent of span.

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

**ORIG ISSUE**: 5-15-84

REV NO. REV DATE:

- Line 63 LINEARITY--Enter the maximum deviation between an average curve and a straight line, usually as plus or minus a percent of span.
- Line 64 REPEATABILITY--Enter the required repeatability. A reasonable standard is 0.1 percent of span.
- Line 65 RESPONSE TIME--Enter the requirement, such as "2 seconds full scale."
- Line 66 SENSITIVITY--Enter the required sensitivity. A reasonable standard is 0.1 percent of span.
- Line 67 .AN ADJ--Enter the minimum span adjustment as a percent if required, "no' if it is not.
- Line 71 IN-OUT CONN--Enter the connection size for the input and output supply lines.
- Line 72 CONTROL ACTION. REVERSIBLE--Nost controllers are reversible in the field. Delete if it is <u>not</u> required.
- Line 73 SUPPLY AIR--Enter the actual supply air for the plant, such as 70-100 psig.
- Line 74 MODES--Enter the operation modes, such as "P" for proportional, "PI" for proportional plus integral, "PD" for proportional plus derivative, and "PID" for proportional plus integral plus derivative.
- Line 75 MEAS INC OUTPUT--Designate whether output should "increase" or "decrease" with measurement increase.
- Line 76 OUTPUT--Enter the required output such as 3 to 15 psi or 6 to 30 psi.
- Line 77 PROP BAND ADJ (P)--Enter the proportional band adjustment desired, such as 20 to 200 percent.
- Line RESET ADJ (1)--Enter the reset rate adjustment desired, such as 0.01 to 1 minute per repeat.
- Line 79 RATE ADJ (D)--Enter the derivative rate adjustment if required. However, derivative is seldom required on this type of liquid level measurement.

REV NO.
REV DATE:

# B27.0 DISPLACER TYPE (ELECTRONIC) LEVEL CONTROLLER/TRANSMITTER (TVA-10581-27)

The first eleven lines should be filled out in accordance with the instructions in paragraph 1.1.

- Line 12 CASE LOCN--Mark "Left" or "Right."
- Line 13 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 14 APPLICATION--Enter the desired application such as liquid level, specific gravity, control, indication, or transmission.
- Line 16 LIQUID--Enter the liquid to be measured.
- Line 17 OPR PRESS MAX-MIN--Enter the maximum and minimum cage operating pressure.
- Line 18 OPR TEMP MAX-MIN--Enter the maximum and minimum cage operating temperature.
- Line 19 SPGR AT OPR T-P--Enter the fluid specific gravity at the operating temperature and pressure.
- Line 20 AMBIFNT TEMP--Enter the ambient temperature limits of the area where the units will be mounted.
- Line 21 BODY MATL--Enter the rage body material.
- Line 22 ANSI RATING--Enter the ANSI pressure rating.
- Line 23 SYSTEM TEMP--Enter the operating temperature of the system fluid.
- Line 28 UPPER CONN--Enter the required type and size of the upper cage connection such as 2" RFF-150 psi, 2" SW, or 1-1/2" NPTF. Also, indicate its orientation: top, side right, side left, or side back.
- Line 29 LOWER CONN--Enter the required type and size of the lower cage connection such as 2" RFF-150 psi, 2" SW, or 1-1/2" NPTF. Also, indicate its orientation: bottom, side right, side left, or side back.
- 1. If a transmitter is specified, complete form TVA 10851-31 (see B31.0).

GROUP: INSTRUMENTATION AND CONTROLS

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84

REV NO.

Line 30 - ROTATABLE HEAD--Mark "yes" if required, "no" or "MS" if not.

Line 34 - GAUGE GLASS--Enter type such as "transparent" or "reflex," if required, "NA" if not.

Line 36 - SEPARATE JCT BOX--Mark "yes" if a separate junction box is required, "NA" if not.

Line 37 - SWITCHES - FORM--List the number of contacts required and form such as 2SPDT. If none, mark "NA" or "None."

Line 38 - SW ENCLOSURE - NEMA--List the switch NEMA rating required such as 3, 4, or 12.

Ein 39 - SW RATING--List the switch rating, such as 4 amperes at 120V ac. This may required both minimum and maximum contact ratings in older to satisfy both electrical and mechanical requirements.

Line 40 - MEAS INC - CONTACT--Designate whether contact "opens" or "closes" on measurement increase.

Line 51 - DISPLACER DIA--Enter the diameter of the displacer, or "MS."

Line 52 - DISPL LENGTH--Enter the displacer length, or "MS."

Line 53 - DISPL MATERIAL--Enter the displacer material, or "MS."

Line 54 - DISPL ROD LENGTH--Enter the length of displacer rod, or

Line 55 - DISPL ROD MATERIAL--Enter material of displacer rod, or "MS."

Line 57 - TORQUE TUBE MATL--Enter material of torque tube, or "MS."

Line 59 - COOLING EXTN--For applications at over 400 F mark whether or not air fin extension is required.

I.ne 62 - HYSTERESIS--Maximum incremental hysteresis difference between the upscale and downscale indications of the measured signal during a full range traverse for a given input, such as ±0.2 percent of span.

Line 65 - RESPONSE TIME--Enter the requirement, such as "2 seconds full scale."

GROUP: INSTRUMENTATION AND CONTROLS

ORIG ISSUE

**SUE**: 5-15-84

REV NO. REV DATE

- Line 67 POWER CONSUMPTION--Enter the maximum allowable power consumption.
- Line 69 SPAN ADJ--Enter the minimum span adjustment if required, otherwise mark "MS."  $\,$
- Line 70 ZERO ADJ--Designate the minimum zero adjustment as required, otherwise mark "MS."
- Line 71 FUNCTION--Indicate how device is to be used by marking
  "TRANS" (transmitter) or "CNTLR" (controller), as applicable.
- Line 72 CONTROL ACTION. REVERSIBLE--Most controllers are reversible in the field. Delete if not required.
- Line 73 SUPPLY VOLTAGE--Enter the available supply voltage, such as 117V 60Hz 10.
- Line 74 MODES--Enter the operation modes such as "P" for proportional, "PI" for proportional plus integral, "PD" for proportional plus derivative, and "PID" for proportional plus integral plus derivative.
- Line 75 MEAS INC,- OUTPUT--Designate whether output should increase or decrease with measurement increase.
- Line 76 OUTPUT--Enter the required output, such as 10 t  $\flat$  50mAdc or 4 to 20mAdc.
- Line 77 PROP BAND ADJ (I)--Enter the proportional band adjustment desired, such as 2 to 200 percent.
- Line 78 RESET ADJ (I)--Enter the reset rate adjustment desired, such as 0.01 to 1 minute per repeat.
- Line 79 RATE ADJ (D)--Enter the derivative rate adjustment if required. However, derivative is seldom required on this type of liquid level measurement.
- Columns The columns can accomodate listing more than one instrument per page.

ITEM NO.--This is the contract item number and will be 'filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number

# B28.0 SQUARE ROOT CONVERTER (TVA-10581-28)1

The first eleven lines should be filled out in accordance with the instructions in paragraph 1.1.

- Line 12 UNIT WEIGHT--Mark "MS," or if knowledge of the weight is required, mark an "X" in the box to the left to indicate the bidder is to fill it in.
- Line 15 CONDUIT CONN--Enter the conduit connection size, if applicable.
- Line 16 ELEC CONN--Enter the required electrical connection, such as plug and cable or screw terminals, or mark "MS."
- Line 17 SUPPLY VOLT/FREQ--Enter the supply voltage and frequency, such as 117V 60Hz.
- Lin- 18 TRANS PWR SUPPLY--Designate whether an integral power unit is required to power the transmitter.
- Line 19 TRANS PWR VOLTS--Enter the required Transmitter Power Supply Voltage or mark "NA".
- Line 20 AMBIENT TEMP--Enter the ambient temperature limits of the area where this equipment will be installed. If device is designated as class IE (line 4) refer to section B30.0 before completing this form.
- Line 21 INPUT SIGNAL--Enter the input signal, such as 4 to 20mAdc.
- Line 23 OUTPUT SIGNAL--Enter the required output signal, such as  $-4\ \text{to}\ 20\text{mAdc}\,.$
- Line 24 LOAD IMPEDANCE--Enter the range of impedance of the load in ohms.
- Line 25 POWER CONSUMPTION--Enter the maximum power consumption for the instrument in watts. (This would usually by determined by the bidder.)
- Line 30 VIBRATION--Specify the estimated acceleration and frequency of vibration, or enter "NA" if insignificant.
- 1. Completion of Form TVA 10851-31 also required (see B31.0).

ORIG ISSUE: 5-15-84

REV NO.

Line 41 - INPUT/OUTPUT ISOL--Mark "yes" if isolation between the input and output is required, mark "no" or "MS" if not.

Line 42 - LOW-LEVEL CUTOFF--Enter the value of the output signal at which cutoff is to occur, or mark "no" or "MS" if this feature is not desired.

Line 43 - OVERRANGE PROT--Enter the amount of overrange required without damaging the instrument. If not significant or none is required, write "MS."

Line 44 - POWER CORD--Designate length and describe any special plug requirements such as '18" twist lock.'

Line 46 - TEST JACKS--Mark "yes" or "MS."

Columns - The columns can accomodate listing more than one instrument per page.

ITEM NO.--This is the contract item number and will be filled in by procurement personnel.

INSTRUMENT NO.--Enter the unique identification (UNID) number.

QTY--Enter the quantity of units with this number.

REMARKS--List accessories. Be sure to give complete details. If more room is needed, use footnotes.

MODEL BID and UNIT PRICE--These columns are to be filled in by the vendor when he submits his proposal.

#### B29.0 LIMIT SWITCHES (TVA-10581-29)

The first 11 lines should be filled out in accordance with the instructions in paragraph 1.1. Line 6 is left blank. Refer to figure B29-1 for a definition of terms.

Line 13 - TYPE--Check "ROTARY" or "PLUNGER", as applicable.

Line 14 - ACTION--Check "MAINTAINED" if maintained contact is required after the switch is actuated. Check "SPRING RET" if spring return is required.

Line 15 - OPRG TORQUE/PRESS--Enter the maximum operating torque (rotary type) or pressure (plunger type) that the operator can supply to operate the limit switch.

Line 16 - CONTACTING SURFACE--Enter the type of contacting surface required (roller, spring, rod, etc.).

#### NOTE

lines 18-21 should be filled in only if a plunger type limit switch is required. If a rotary type switch is being specified enter "NA" for lines 18-21.

- Line 18 ACT DIRECTION--Check "EXTEND" if switch actuation is required when switch plunger is extended. Check "COMPRESS" if switch actuation is required in the compressed position.
- Line 19 PLUNGER LG--Enter the required clearance between the mounting surface and plunger end when the switch is in its non-actuated position. If an adjustable clearance is required list the adjustable range.
- Line 20 PLUNGER TRAVEL--Enter the plunger travel required to actuate the switch.
- Line 21 PLUNGER OVERTRAVEL--Enter the amount of overtravel that the switch must sustain without damage after actuation.

#### NOTE

Lines 24-31 should be filled out only if a rotary type of limit switch is required. If a plunger type of switch is being specified enter "NA" in lines 24-31. IVA

REV NO:

Line 24 - OPRG DIRECTION--Check the direction of rotation required for actuating the switch.

Line 25 - NON ACT POSN--Enter the required non-actuated location of the operating lever in degrees.

Line 26 - OPRG POSN--Enter the required location of the operating lever when the switch actuates in degrees.

Line 27 - OVERTRAVEL--Enter the amount of overtravel required after the switch actuates.

Line 29 - OPRG LEVER LG--Enter the operating level length required (see figure B29-1). If an adjustable length is required enter the adjustable range followed by "Adj."

Line 30 - SURFACE CLEAR--Enter the surface clearance (see figure B29-1).

Line 31 - OFFSET DEPTH--Enter the offset depth required (see figure B29-1).

Columns - The columns can accommodate listing more than one limit switch per page.

ITEM NO.--Will be filled out by procurement engineer.

INSTRUMENT NO. -- Enter UNID number of switch.

 $\ensuremath{\mathsf{QTY}}\text{--} Enter number of switches with the same instrument number.}$ 

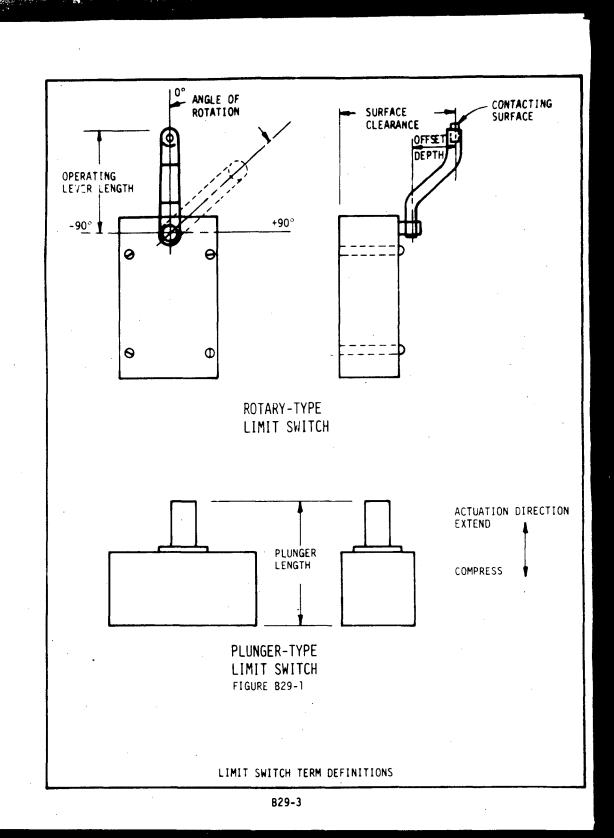

SWITCH - QTY--Enter the quantity of contact sets required.

SWITCH - TYPE--Enter the form of switch (SPDT, DPDT, etc.).

SWITCH - VOLTS--Enter the voltage rating for the switch.

SWITCH - AMPS--Enter the amperage rating for the switch.

REMARKS--Enter any additional requirements using footnotes if necessary.

REV NO. REV DATE

B30.0 ENVIRONMENTAL CONDITIONS FOR CLASS 1E EQUIPMENT (TVA 10581-30 and TVA-10581-30a)

It is mandatory that forms TVA-10581-30 and TVA-10581-30a be completed for each device designated as IEEE Class 1E on line 4 of TVA forms 10581-1 through 10581-29.

Data forms TVA 10581-30 and 10581-30a should carry the same data sheet number (lower right corner) as the data form that identifies the requirements for the device. TVA 10581-30 or 10581-30a then becomes "Sheet 2" of that data sheet.

Any data sheet entries on the device data forms (TVA 10581-1 through 10581-29) for environmental conditions (ambient temp., press, etc.) should refer the the related from TVA 10581-30, sheet 2, by entering "see sheet 2" in the proper blank on sheet 1.

The lines of form TVA 10581-30 should be completed as follows:

- Line 1 ITEM NO.--Will be completed by the procurement engineer.
- Line 2 INSTRUMENT NO.--Enter the instrument (UNID) number.
- Line 6 NORMAL TEMPERATURE--Enter the normal ambient temperature the device must operate in (include units).
- Line 7 NORMAL PRESSURE--Enter the normal ambient pressure the device must operate in (include units).
- Line 8 NORMAL HUMIDITY--Enter the normal ambient relative humidity the device must operate in (in % RH).
- Line 9 NORMAL RADIATION--Enter the normal (background) radiation (in RADS-TID).
- Line 10 NORMAL DUST--Check "yes" if device must normally operate in an extreme dust environment; check "no" otherwise.

#### NOTE

Abnormal operating conditions are defined as conditions that may exist for a small percentage of the plant's lifetime. The abnormal operating conditions do not include accident conditions. An example of an abnormal operating condition might be the abnormal temperature and humidity caused by the failure of an air conditioning unit on a hot summer day, or the abnormal ambient pressure caused containment leak rate test pressurization. These definitions of "abnormal" should be considered when completing lines 14-18.

B30-1

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84

REV NO:

Line 14 - ABNORMAL - TEMPERATURE--Enter the abnormal ambient operating condition (include units).

Line 15 - ABNORMAL - PRESSURE--Enter the abnormal ambier operating pressure (include units).

Line 16 - ABNORMAL - HUMIDITY--Enter the abnormal ambient operating humidity (in % RH).

Line 17 - ABNORMAL - RADIATION--Enter the abnormal background radiation (in RADS).

Line 18 - ABNORMAL - OPERATE SUBMERGED--Mark "yes" if device must operate submerged, "no" otherwise.

fine 19 - ABNORMAL - NONOPERATE SUBMERCED--Mark "yes" if device must operate after being submerged but not while submerged.

Line 20 - ABNORMAL - DEPTH--Enter the depth of submergence if "yes" was marked in lines 18 or 19 above: "NA" otherwise.

#### NOTE

The accident operating conditions are those ambient conditions that exist because of an accident (LOCA or HELB) (1) through which a device must satisfactorily operate to migitate the accident, or (2) through which it must not fail in a manner detrimental to plant safety. When the accident operating conditions are available in graph form, or as an algebraic function of time, include the graph or function on the form TVA-10581-30a or 30b (or on a separate attachment). When the information is included in graph or function form, refer to the graph or function in the appropriate blank on the form TVA 10581-30.

- Line 21 ACCIDENT TEMPERATURE--Enter the peak ambient accident temperature through which the device must operate.
- Line 22 ACCIDENT PRESSURE--Enter the peak ambient accident pressure through which the device must operate.
- Line 23 ACCIDENT HUMIDITY--Enter the peak ambient accident humidity through which the device must operate.
- Line 24 ACCIDENT RADIATION DOSE--Enter the amount of radiation (in RADS-TID) the device will receive as a result of the accident only.

GROUP: INSTRUMENTATION AND CONTROLS

TITLE: Preparation of Data Sheets for Purchase Requests

ELECTRICAL DESIGN STANDARD DS-E18.3.5

ORIG ISSUE: 5-15-84

REV NO.

Line 25 - ACCIDENT - MAX RAD DOSE RATE/TIME--Enter the maximum radiation dose rate and the length of time this dose rate will continue.

Line 26 - ACCIDENT - CAUSTIC SPRAY--If the device will experience caustic spray-down during an accident and is required to operate during or after the spray-down, check "yes." If "yes" is checked, the section of the form TVA-10581-30 entitled "Caustic Spray Composition" should be completed. If device will not experience caustic spray-down or is not required to operate during or after a caustic spray-down, check "no."

Line 27 - ACCIDENT OPROTIME(1)--Enter the length of time after the beginning of the accident that the device must operate (in minutes, hours, days).

i.ine 28 - ACCIDENT - SUBMERGENCE DEPTH--If the device must continue to operate or not fail in a manner detrimental to plant safety when submerged, enter the submergence depth (in feet or inches), otherwise mark "NA."

Line 29 - ACCIDENT - REQ'D ACCURACY--Enter the required accuracy of the device during and after the accident:

Other entries - ITEM NO.--Same as line 1.

INSTRUMENT NO.--Same as line 2.

FUNCTION--Describe briefly but clearly, in detail the function of the device. (Example: "The pressure switch must actuate during all LOCAs and HELBs inside the containment to initiate the start of reactor coolant injection pump if the pressure of the reactor coolant injection header drops below 2000 psia.") If the device is part of an instrumentation loop, enter "refer to loop data sheet XX for definition of function."

REMARKS--List any other pertinent information.

CAUSTIC SPRAY COMPOSITION--If the "yes" blank for "caustic spray" (line 26) has been checked, enter the caustic spray chemical composition. Be sure to include units (e.g., % by volume, % by weight, % Molar). Also include the pH.

REV NO. REV DATE:

### B31.0 LOOP DATA (TVA 10581-31)

When an instrument forms part of an instrument loop, form TVA 01581-31 and form TVA 10581-XX must be completed for each instrument to ensure compatability with other instruments in the loop. Form TVA 10581-31 shall be completed as follows:

LOOP SKETCH--Draw a simple, functional sketch (bubble diagram) showing all instruments in the loop. Include existing instruments and new instruments. Indicate the physical location of each instrument by entering "FM" for field mounted, "AIR" auxiliary instrument room, or "MCR" main control room, beside the instrument symbol on the sketch.

PROCESS RANGE--Enter the process range in engineering units.

SIGNAL--If the same signal is used throughout the loop, enter the signal range. If multiple signals and mediums are included in the same loop enter "see below."

FUNCTION NO. -- No entry required.

FUNCTION--Enter the type of function to be performed by the loop (alarm, trip, indicate, control, etc.). Where loop has multiple functions, list each function separately in rows and complete an entry for each column of the row. For a trip function, the next row entry shill be for the reset function and shall be identified as "reset X," where X is the function number for the trip function.

FINAL DEVICE--Enter the instrument number of the last instrument in the loop that performs the function. (For example, electronic switch TS-74-54 provides trip function).

ACCURACY BASIS--Enter the basis for calculating the accuracy specified in the "ACCURACY" column (% span, % reading, engineering units, etc.).

ACCURACY RANGE--Specify the range in engineering units over which the accuracy specification applies. If the accuracy is required throughout the entire range enter "ENTIRE."

REV NO.

LOOP INSTRUMENTS--This section is needed only if part of the instrument loop is being specified for procurement. This helps ensure that all instruments in the loop will be compatible with the instruments being procured. This section is not required when the entire loop is being specified for procurement.

INST NO.~-List the UNID number for each instrument shown on the LOOP SKETCH.

MANUFACTURER--Enter the manufacturer for each instrument number.

MODEL NO, -- Enter the model number.

INPUT SIGNAL--Enter the required input signal for each instrument as installed in the loop. For electronic current loops include the current to the dropping resistor (if separate from the instrument) in the input signal specification. Include units in the "input signal" entry (mA, V, psi, etc.). If the instrument is a loop sensor enter "PROCESS." (In "flow-sensing" loops using differential pressure primary flow sensors (orifice plates, pitot tubes, annuhars, etc.) the primary flow sensor is considered as the loop sensor.)

INPUT IMPEDANCE--For electronic loops, enter the input impedance for each instruments, including any loop dropping resistors. Include tolerance values for dropping resistors, where applicable. For non-electronic loops, enter "NA."

OUTPUT SIGNAL--Enter the output signal for each instrument including units (mA, V. psi, etc.). For contact outputs enter "CONTACT."

ACCURACY--Enter the accuracy of the instrument as specified by the manufacturer. This figure must include the effects of environmental extremes or other factors and must correspond to the operating conditions assumed when the function accuracy was specified.

ACCURACY BASIS--Enter the basis for the accuracy (e.g., % input span, % output span, % reading).

POWER SUPPLIES--Complete this section only if an existing power supply will be used or if the power supply is being procured under a separate PR.

INST NO. --Enter the instrument number of the power supply.

MANUFACTURER--Enter the name of the manufacturer.

REV NO.

MODEL NO. -- Enter the complete model number.

RATING--VOLTAGE--Enter the nominal power supply voltage.

RATING--CURRENT--Enter the maximum current at the rated voltage.

VOLTAGE REGULATION--Enter the voltage regulation as either a range of voltage or a percent of nominal voltage. For unregulated power supplies, a voltage range shall be specified that includes the effects of anticipated ac bus voltage flucuations.

EVALUATION SHEET

Rev. R3 Date  $\frac{3}{13/84}$ 

1. Task Force Category 6 for Watts Bar Nuclear Plant - Unit 1

2. Task Force Category Description and Related B&V Findings: Discrepancies between design documents (analysis results, load tables, isometric drawings, design drawings, etc.) used in the design of piping systems: F310, F319, F324, F325, F346, F751, F868.

### 3. Evaluation for Cause

# A. Preliminary

(1) Regarding findings (F319, F324, F325, F346) the cause stems from ineffective handling of interfaces between two analysis (i.e., lap zones). (2) The remaining findings appear from the initial evaluation to be random errors in the design verification process with no uniquely definable cause.

### B. Final

WBN unit 1: Regarding findings F319, F324, F325, and F346 the cause stems from: (la) ineffective handling of the interface region between two analyses and (lb) errors related to the use of the -ANCHOR program. (2) The remaining findings were determined to be random individual errors in the design process with no uniquely identifiable cause. The errors if uncorrected would not result in a failure of the piping pressure boundary or loss of system function. No additional evaluation is required.

Resp. Org. 72 comme 3/15/84 Task Force Concurrence 2/16/84

# 4. Evaluation for Generic Examples

### A. Preliminary

(1) The scope of the evaluation for generic examples should include a review of all lap zones in Watts Bar unit 1. (2) The determination of generic examples will be made after the cause and effects of the individual findings are evaluated.

#### B. Final

(la, lb) The scope of the evaluation for generic examples should include a review of all rigorous analyzed lap zones and anchors (effected by the -ANCHOR program) in WBN unit 1. (2) No further evaluation is required, see 3.B.(2) above.

(la, lb) The review has been completed. Thirty-two problems were identified requiring revision due to lapping deficiencies. All skewed anchors which were analyzed using the direction cosine option in question will be reanalyzed.

Resp. Org. 72 Grim 3/15784 Task Force Concurrence 28/11/84

- 5. Licensing Basis Satisfaction
  - A. Preliminary
    - (1) The licensing bases for these findings are not satisfied. (2) The determination of whether or not the licensing basis for the remaining findings are satisfied will be made after the findings are evaluated.
  - B. Final (la, lb) The licensing basis for these rindings is not satisfied. (2) Licensing basis is satisfied.

Resp. Org. 72 Cuin 3/15784 Task Force Concurrence 2 June 3 1/6/84

- 6A. Identification and Evaluation of Ongoing Corrective Action for Completed Work
  - A. Preliminary (1) USNRC NUREG/CR-1980 addresses lapping in piping analyses. Also corrective action is in progress in response to unresolved Item 390/82-27-09 per NR letter D.M. Verrelli to H. G. Parris dated September 10, 1982 and NCR's WBNCEB 8233 WBNSWP 8309, WBNSWP 8312, WBNCEB 8232. This appears to be an adequate approach but the task force has not fully evaluated the corrective actions. (2) No generic corrective action is identified for this group of findings.
  - B. Final

    (1a) NCRs WBNCEB8233, WBNSWP8309, WBNSWP8312, and WBNCEB8232 specifically address the findings and cause. All lapped regions are being reviewed and corrections are being made to piping analysis and support design as required. Unresolved item 390/82-27-09 is being investigated and the correctness of the WBN lapping technique is being verified. Criteria has been issued in the rigorous analysis handbook. This correction is judged adequate. (See Continuation Sneet page 7.)

    Resp. Org. Technical 3/5/84. Task Force Concurrence
- 7A. Identification of Corrective Action for Completed Work
  - A. Preliminary
    (1) Resolve differences in lap zones analyses and results and any designs resulting therefrom. (2) All findings not identified in 3.A.l shall be evaluated to determin whether or not the affected piping systems will fail (loss of function) if the conditions found by B&V were not corrected. This information will be used to determine if identification of other generic examples are required.
  - B. Final

The plan in 6A.B. appears adequate.

Resp. Org. 72 Commin 3/15/84 Task Force Concurrence 3/16/84

- 8A. Implementation and Inspection of Corrective Action for Completed Work
  - A. Preliminary
  - B. Final

(1a) All piping analysis work is complete. A total of 32 problems were revised (12 of these were reanalyzed). The WBN lapping criteria has been verified by EDS (IMPELL) as being correct. Remaining design work is being tracked through NCRs WBNCEB8233, WBNSWP8309, WBNSWP8312 and WBNCEB8232. (1b) All piping analysis work is complete. All affected anchor load tables have been reissued. Remaining design work is being tracked through NCR GENCEB8302(R1). (2) Deviation corrected if appropriate.

Resp. Org. 72 June 3/15/84 Task Force Concurrence 2/16/84

- 9A. Identification and Evaluation of Ongoing Corrective Action for Future Work
  - A. Preliminary (1) USNRC NUREG/CR-1980 addresses lapping in piping analyses. Also corrective action is in progress in response to unresolved Item 390/82-27-09 per NRC letter D.M. Verrelli to H. G. Parris dated September 10, 1982 and NCR's WBNCEB 8233, WBNSWP 8309, WBNSWP 8312, WBNCEB 8232. This appears to be an adequate approach but the task force has not fully evaluated the corrective actions. (2) No corrective action has been identified for this group of findings.
  - B. Final

(1a) As discussed in 6A.B the lapping criteria has been issued in the rigorous analysis handbook. (1b) As discussed in 6A.B the -ANCHOR program has been modified, the output has been modified, and the owners manual has been modified.

(2) No further corrective action is required.

Resp. Org. T. Commis 3/15/84 Task Force Concurrence 21/184

10A. Identification of Corrective Action for Future Work

A. Preliminary

B. Final

The action identified in 9A.B appears to be adequate.

10B. Identification of Corrective Action for Future Work

TVA Task Force for Review of Black & Veatch Findings

### BLACK & VEATCH EVALUATION SHEET (Continuation Sheet)

6A. Identification and Evaluation of Ongoing Corrective Action for Completed Work

### B. Final - continued

(1b) NCR GENCEB8302 R1 specifically addresses this cause. The -ANCHOR program has been modified, the output has been modified, and the users manual has been modified to reflect these changes. All skewed anchors which were analyzed using the direction cosine option in question will be reanalyzed. Anchor loads will be compared to the previous design loads, and anchors will be redesigned as needed. This correction is judged adequate. (2) These were random individual errors and no further corrective action is required.

UNITED STATES GOVERNMENT

### Memorandum

: Quality Management Staff Files

. J. W. von Weisenstein, 384 SPB-K FROM

DATE : NOV 27 1984

SUBJECT: ASSESSMENT OF ADEQUACY OF CORRECTIVE ACTION FOR FUTURE WORK FOR BLACK AND

VEATCH TASK FORCE CATEGORY 6

For this category, the TVA task force for review of Black and Veatch findings determined that the condition was applicable to Watts Bar units 1 and 2 and that corrective action was required for completed and future work. QMS performed a surveillance in accordance with the attached scoping document to assess the adequacy of corrective action implementation for completed and future work, as well as the effectiveness of corrective action for future work. The results of that surveillance, contained in the attached surveillance report, verified the adequacy of the work accomplished.

Additionally, our surveillance was primarily of unit 1 corrective actions as unit 2 corrective actions are scheduled for completion by February 1986. Based on our assessment of the adequacy of corrective actions for unit 1 and that unit 2 corrective actions are in a controlled system (NCR GENCEB8403), we have adequate confidence that unit 2 corrective actions will be properly tracked to completion.

As a result of the aforementioned controls and our assessment of category 6, we conclude that this category can be closed by signing and dating item 12A, "Verification of Effectiveness of Corrective Action for Future Work."

### I. Management Summary:

The design processes evaluated are outlined in the attached surveillance scoping document and were determined to be in compliance with requirements.

### II. Conclusions and Recommendations:

Based upon the results of this surveillance, implementation of corrective action for completed work and future work have been accomplished as committed by the TVA task force evaluation sheets for category 6. It should be noted, however, that although corrective action for Watts Bar unit 1 is complete, corrective action for unit 2 has not been completed. Corrective action for unit 2 is being handled per NCR GENCEB8403 (ECN 3883) and is scheduled for completion by February 1986.

The basic corrective action for both units was to revise the -ANCHOR computer program and then revise the affected documents (drawings, etc.). The -ANCHOR computer program has been revised and all that remains is the revision to the affected documents for unit 2. This activity is being handled in a controlled system (NCR and ECN) and should be acceptable for closure of this category.

#### III. Details:

A. Performed the following surveillance activities to verify implementation of corrective action for completed work:

Verify that a review was performed and documented for all rigorously analyzed lap zones and anchors (effected by the -ANCHOR program in WBN unit 1). Sample one problem to verify that any deficiencies were identified and corrected (or are in a controlled system and are to be corrected). Verify that the review identified all skewed anchors analyzed with the direction cosine option. Sample one such analysis to verify reanalysis was performed to correct the deficiencies (or that the deficiencies are in a controlled system and are to be corrected).

Page 1 of 4

02530

Results: All of the Black and Veatch findings classified as category 6 were associated with the WBN anchor program in some manner. There were several individual NCRs written to cover these detailed findings and an overall generic NCR to cover the computer program used for the anchor program. As a part of the corrective action for the overall generic NCR, all anchor problems have been rerun or are planned to be rerun. By virtue of rerunning all the anchor problems, each individual Black and Veatch finding is being resolved. The following is a listing of the NCRs which cover the detailed findings.

1. NCR WBNCEB8232

- a. Affected documents: N3-9-4A, 0600200-02-05, and 47B427-370
- b. ECN 3511
- c. NCR closure memorandum CEB 840402 004

2. NCR WBNCEB8233

- a. Affected documents: N3-3-13A and N3-3-14A
- b. ECN 3511
- c. NCR closure memorandum CEB 840413 002

3. NCR WBNSWP8309

- a. Affected documents: 47A060-3-8 and 47A060-3-10
- b. ECN 3511
- c. NCR closure memorandum MEB 840412 009

4. NCR WBNSWP8312

- a. Affected documents: 47A060-3-9 and 47A060-3-11
- b. NCR closure memorandum MEB 840503 022

These NCRs and their associated documents were reviewed and found to be acceptable for the closure of the detailed findings for WBN unit 1.

The starting point for the anchor program is the computer program which is used for determining the design loads for piping anchors. This program was found to be in error and was documented on NCR GENCEB8302. This NCR was later superseded by NCR GENCEB8402. The basic corrective action for this NCR was to revise the computer program, rerun the anchor loads, and revise the affected documents. This action has been completed for unit 1 and NCR GENCEB8402 has been closed per memorandum CEB 840525 003. However, the remaining activity for unit 2 has not been completed and is being tracked per NCR GENCEB8403. The scheduled date for completion is February 1986.

B. Performed the following surveillance activities to verify implementation of corrective action for future work:

Verify that the -ANCHOR program and the owner's manual have been modified so that all deficiencies were corrected.

Page 2 of 4

Results: Revision 3 of the -ANCHOR computer program was issued March 8, 1984, along with the user manual. This revision corrected the identified deficiencies.

C. Performed the following surveillance activities to assess the effectiveness of corrective action for future work:

Assess the effectiveness of the corrective action for one anchor analysis problem which was analyzed after completion of the corrective action.

Results: Reviewed the following anchor analysis problem and associated documents and found it to be acceptable: 060D250-09-10 and 47B435-574.

NONCONFORMANCE REPORT T REPORT NO WBNSWP8309 [16] ASSIGNABLE CAUSE TREQUIRED IT SIGNIFICANTI The stiffness of anchors 47A060-3-8 and 47A060-3-10 failing to meet the requirements of design criteria WB-DC-40-31.15 is due to inadequate design and checking. THIS IS A GENERIC CONDITION ACTION REQUIRED TO PREVENT RECURRENCE (REQUIRED IF SIGNIFICANT) All support designers involved in box anchor design have been notified in writing (WBP 840213 021) of the latest stiffness requirements as specified by design input memorandum on piping system anchor criteria WB-DC-40-31.15 (CEB 830603 028). Designers have also been trained in the application of EP 4.25, Design Review and Interface Coordination of Detailed Construction and Procurement Drawings. MEDS Accession No. SWP 83 0209 047

WBNSWP8312 T REPORT NO PLANT WATTS BAR NUCLEAR PLANT UNIT PREPARER/ORGANIZATION/DATE J. R. Holloway/SWP/February 9, 1983 DESCRIPTION OF CONDITION Black and Veatch Review Finding No. F-325 In the original calculations for anchor supports 47A060-3-9 and 47A060-3-11 (Calculation No. WMG 2015), the method of analysis used for determining the structural adequacy was found to be in error. The original designer had mistakenly input the units for the applied forces as (1bs x  $10^{-3}$ ) into the SAGS computer program. The result of this type of input would be that the computer could allow member stresses to far exceed the member yield stress. In this particular case, for these two anchors, the loads happened to be low enough such that when the program was rerun using the correct yield stress value it was found to still be adequate. Due to the possible implications of this deficiency a sample from three other systems was reviewed and from the results of this sample, it was determined that this was an isolated case. 840507E0478 DATE OF OCCURRENCE EST & 1, ACT ( ) 12/10/80 9 SIGNIFICANT CONDITION ADVERSE TO QUALITY METHOD OF DISCOVERY Black & Veatch Rev (F-325) 10 BRANCH CHIEF DATE UNID CODE (EN DES-EP 8.01) 2 9 83 11 CORRECTIVE ACTION Calculations were redone using correct applied forces. # EN DES NONCONFORMANCE REPORT COMPLETION VERIFICATION SHEET

NCR NO. WENCEBB232

SIGNIFICANT YES D NO M REPORTABLE
YES D NO X

- A. Have any analyses, contracts, memorandums, etc., requiring EN DES work been generated? Yes ロ No p If yes, list in (C) below.
- B. Have all ECNs related to the NCR been issued? N/A □ Yes 其 No □ If yes, list in (C) below.

H. Remarks:

C. Documents related to the NCR (ECN, analyses, memos, contract No., etc.)

Gentlemen:

SUBJECT: REPORT NOS. 50-390/85-35 AND 50-391/85-29

On April 1-4, 1985, NRC inspected activities authorized by NRC Construction Permit Nos. CPPR-91 and CPPR-92 for your Watts Bar facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed inspection report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress.

Within the scope of the inspection, no violations or deviations were identified.

Should you have any questions concerning this letter, please contact us.

Sincerely,

David M./Verrelli, Chief Reactor Projects Branch 1 Division of Reactor Projects

### SUMMARY -

Scope: This routine, announced inspection involved 28 inspector-hours at the Engineering Design Offices in Knoxville, Tenneesee, in the areas of seismic analysis for as-built safety-related piping systems and pipe support baseplate designs using concrete expansion anchor bolts.

Results: No violations or deviations were identified.

### REPORT DETAILS

#### Persons Contacted 1.

Licensee Employees

\*T. C. Cruise, Project Engineer, Office of Engineering (OE)

\*G. Cantiz, Project Managers Office

\*J. Ellis, Senior Engineer, Civil Engineering Branch (CEB) \*D. H. Level, Civil Engineer, CEB

\*J. W. McReynolds, Assistant to Branch Chief, CEB

\*G. Owens, Nuclear Engineer, OE

\*N. Perry, Senior Civil Engineer, OE \*W. R. Sirett, Section Supervisor, OE

Other licensee employees contacted included engineers, technicians and

\*Attended exit interview

#### 2. Exit Interview

The inspection scope and findings were summarized on April 4, 1985, with those persons indicated in paragraph 1 above. The inspector described the areas inspected and discussed in detail the inspection findings listed below. No dissenting comments were received from the licensee.

The licensee did not identify as proprietary any of the materials provided to or reviewed by the inspector during this inspection.

### 3. Licensee Action on Previous Enforcement Matters

(Closed) Unresolved Item (URI) 390/82-27-09, "Analytical Techniques used in Piping Analysis." The inspector held discussions with responsible licensee representatives and reviewed supporting documentation to verify that the unresolved items identified in Inspection Report 50-390/82-27 have been addressed. The unresolved items in the report have been identified in paragraph 8 as 8a.(1), 8a.(2) and Subparagraphs 8a.(1) and 8a.(3) were closed in Inspection Report 50-390/84-78. The inspector reviewed the following documents to assure compliance of the licensee's response to the unresolved items:

# Subparagraph 8 a.(2)

WBN-RAH-200 Policy No. 1, dated April 25, 1983

"Dynamic Overlapping"

Impell Report No. 03-0060-1057, Revision O, dated August 1983

"Evaluation of the Overlap Piping Method for Watts Bar Nuclear Plant"

NCR Gen CEB 8215, closed out November 9, 1983, and TVA memo from Standifer to Wadewitz dated April 1, 1985, RE: TVA Response/Position.

- (Closed) Violation 390/85-18-01, "Improper Design of Pipe Support 4/A496-5-14 RI". The inspector held discussions with responsible licensee representatives and reviewed supporting documentation to verify that the violation identified has been addressed. The licensee has issued a Nonconformance Report (NCR) to resolve the instability of the support. The support has been redesigned. determined this is an isolated case. To prevent potential recurrence, designers have been instructed in the requirements stated in Watts Bar Pipe Support Design Manual, Section 7.1, Revision 2, titled, "Things to Avoid in the Design of Pipe Supports." This item is considered closed.
- (Open) Unresolved Item 390/84-05-05, "Friction Force Considerations for Pipe Support Design". The inspector held discussions with responsible licensee representatives and reviewed supporting documentation to verify that the concern identified has been resolved. The licensee has reviewed 2001 Unit 2 pipe supports to provide a basis for a quantitative assessment that the effects of friction were of little significance and had no effect on overall design of a support for Unit 2. At the time of this inspection, the licensee had not yet completed their final review. This item remains open pending further review of Unresolved Items

Unresolved items were not identified during the inspection.

### 5. Licensee Identified Items

- (Closed) Item 390/85-10 and 391/85-10, "Design Errors of Drawing 47W491-8" (10 CFR 50.55(e)). The final report was submitted on March 11, 1985. The report has been reviewed and determined to be March 11, 1985. acceptable. The inspector held discussions with responsible licensee representatives, reviewed supporting documentation and observed representative samples of work to verify that the corrective actions
- (Closed) Item 390/85-12 and 391/85-13, "Failure to Identify A Water Spray Hazard" (10 CFR 50.55(e)). The final report was submitted on March 22, 1985. The report has been reviewed and determined to be Ь. acceptable. The inspector held discussions with responsible licensee representatives, reviewed supporting documentation and observed representative samples of work to verify that the corrective actions

# RIGOROUS ANALYSIS HANDBOOK POLICY STATEMENT

Policy No. 1 Section No. WBN-RAH-200

PLANT: WATTS BAR NUCLEAR PLANT

SUBJECT: DYNAMIC OVERLAPPING

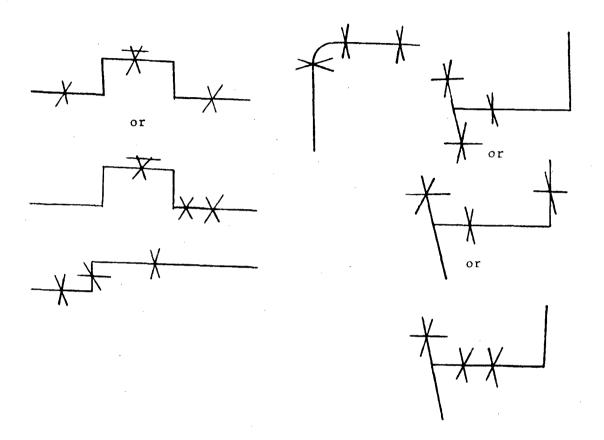

DATE: APR 2 5 1983

The interface of two rigorously analyzed problems should be terminated with one of the following requirements for the dynamic case.

- 1. A structural anchor can be built which uncouples the problems. However, for some cases, this is not economically feasible. A stress intensification factor of 2.1 should be used in the analysis for the termination anchor. Tee anchors and inline anchors are acceptable.
- 2. The problems may be dynamically overlapped. Structural enveloping is a procedure for analyzing the dynamic response of a piping system by performing a separate analysis on subsystems of a complete structure. The model being analyzed is extended into the adjacent problem to form a common region. Transfer of dynamic loading across the common region should be minimized. To accomplish this structural isolation, the common region must be supported to minimize the transmittal of bending, axial, and torsion movements.

The following sketches illustrate the minimum requirement for overlapped regions to be utilized when evaluating the acceptability. Three closely spaced lateral supports and one axial support is required. It is acceptable for one of the lateral supports to act as an effective axial support. All supports must be rigid during a seismic event. Torsion must be restrained.

### Minimum configurations are:

Support loads in the overlapped region must be enveloped. The overlapped region will be shown by dashed lines and lap point designations. A note will be placed on the support load table designating which support loads are enveloped. A note will be included on the isometric identifying the other problem.

### EXECUTION PROCEDURE

PROGRAM: ANCHOR Software ID 262235

version: 3.0

DATE: March 8, 1984

COMPUTER FAMILY: KBN

EXECUTION INSTRUCTIONS: -ANCHOR

The above execution instructions are maintained and validated for use by the Civil Engineering Support Branch. These are the only controlled procedures for executing the program with use of this manual.

| RO   | Version 1.0. Original version of the code.                                                                                                                                                                                                                                                                                                                                                                                     | J. E. McCord<br>3/15/76<br>J. EM Cid | Dietrich Riffert<br>11-14-81<br>Victor Riffert |
| Rl   | Version 2.0. Revised per NCR 8302. Both the input and output have been modified regarding the direction cosines option. All references to the record and input coordinate systems has been removed. Modified to automatically calculate the direction cosines used to define the local coordinate system based on global plant coordinates. Output modified to report loads in the global and local coordinate systems. Stress | D. W. Hargroves 5/6/83  Am Halffurs  | Dave Loewus 5/18/83  David Lourus              |

R2 Version 3.0. Revised the ANCHOR LOADS IN THE LOCAL COORDINATE SYSTEM table to remove unconservative results which occurred when the anchor coordinate system was not colinear with the global coordinate system.

difference (reserve stress) is no longer input or reported.

#### 1.0 PROGRAM DESCRIPTION

The ANCHOR program is designed to evaluate anchor design information required for the design of a plate and shell or a structural type anchor. Since load cases are defined internally to the ANCHOR program, it is intended to be used for ice-condenser plants, specifically Watts Bar and Sequoyah, but can be utilized for other plants by combining other load cases into those defined for the ANCHOR program. The program is designed to be specifically compatable with TPIPE and in all but special cases, all input to ANCHOR can and should come directly from the TPIPE input and output. Forces, moments and their corresponding coordinate systems are input and then combined in the global coordinate system, and a local coordinate system based on global coordinates inline to the run of pipe connected to the anchor.

The analyst should prepare an input deck as described in Section 3.0. Loads are imposed on an inline anchor from two sides, generally given by two separate TPIPE analyses. Forces and moments are extracted from the PIPING SYSTEM REACTIONS table of TPIPE keeping the signs in all cases. If a non-global coordinate system has been defined in the TPIPE run using direction cosines, the analyst should extract these directly from the input data echo (not extensive data check). ANCHOR will transpose these loads back into the Global coordinate system. Loads and direction cosines are extracted in similar manner from the TPIPE analysis for the other side of the anchor, which may have a different coordinate system definition. These are similarly transposed into the Global coordinate system and combined per the equations in Section 2.0. Loads will be reported in this Global coordinate system.

Since the anchor load designer is usually interested in the local loads imposed on the anchor, the analyst should supply the Global coordinates of the anchor and a point inline to the run of pipe connected to the anchor to define this local coordinate system. The intent is to keep local—x axial to the pipe, local—z lateral to the pipe (in the horizontal plane), and local—y following the right hand rule (y=z cross x). Local—x is directed from the anchor to the inline point, local—z is local—x crossed into GLOBAL—Y, and local—y is local—z cross local—x. The analyst should specify the anchor node name from the TPIPE analysis and the inline point node name related to these coordinates (if the TPIPE coordinates are not absolute plant global coordinates, the analyst must convert them to GLOBAL!). ANCHOR will refer to these node names in the BPRINT (an issuable load table printout) to define the local coordinate system.

For special cases of curved pipe for which there is no inline point, it is suggested that the analyst define a point in space lying on a line tangent to the pipe at the anchor point. The <u>inline</u> point node name should be left blank in this case and the BPRINT will refer to the global coordinates of this point instead of the node name to define local-x. A TPIPE control point may be used as an inline point for anchors at or near an elbow. For cases where the pipe is vertical, ANCHOR defines local-x as GLOBAL-Y, local-y as GLOBAL-X and

local-z as minus GLOBAL-Z -- even if the inline point is below the anchor point. After the input deck is complete per Section 3.0, the analyst may execute ANCHOR per Section 7.0.

Most piping systems require revised analysis after the original issue to reflect changes made in the piping system. To prevent future revisions from affecting the redesign of supports and anchors and to keep minor changes from requiring the reissue of anchor load drawings, rounding techniques are used to increase the design loads slightly to account for this. If no rounding is requested (Section 3.0), loads will be rounded up to the nearest 10. If rounding is requested, loads will be increased 10 percent and then rounded to the nearest 10.

All Nomenclature, special symbols, and definitions discussed in the following sections are given in Appendix C. Governing equations and theory used in ANCHOR are given in Section 2.0.

#### 2.0 ASSUMPTIONS AND LIMITATIONS

The philosophy of anchor load evaluation differs from the support loads calculated in TPIPE. In evaluating the maximum secondary loads for supports, all the load sources are assumed to act simultaneously, and the load calculated is consequently conservative. Anchor design, however, presents a difficult problem in designing the unit rigid enough to be effective. Consequently, the secondary load sources are considered to act simultaneously only when it is actually possible to do so. To accomplish this, an intermediate step in the load calculation is added in which the containment pressure transient loads are combined with the appropriate thermal mode loads prior to being used for anchor load evaluation. When calculating the secondary load combinations in this manner, care must be taken to handle both sides of an inline anchor in the same manner.

If the loads are known for both sides of the anchor, the total load for that analysis will first be calculated before applying the following equations. The loads for both sides will be added for CP, TH, DW, PL, WH, CS, and VT analysis. The loads for both sides will be absolute value addition for CT, S1, S2, DM, E1, and E2.

Each of the following are tabulated for consideration in the design of anchors. Note that thermal conditions can be shown to be acting for each plant condition by the use of scale factors.

SNP = Scale factor for upset condition

SFD = Scale factor for faulted upset with DM condition

SFA = Scale factor for faulted condition after DM

Three secondary loads must be evaluated. For each thermal mode:

Secondary upset - Normal

$$SUP+ = (TI+ + /S1/) * SNP$$
  
 $SUP- = (TI- - /S1/) * SNP$ 

Secondary faulted - DM, S2

$$SF1+ = (TI+ + /DM/ + /S2/) * SFD$$
  
 $SF1- = (TI- - /DM/ - /S2/) * SFD$ 

Secondary faulted - CP, CT, S2

$$SF2+ = (TI+ CP+ + /CT/ + /S2/) * SFA$$

SF2- = (TI- CP- - /CT/ - /S2/) \* SFA

Secondary faulted loads are listed below:

SF+ = Larger of SF2+, SF1+, AND SUP+ SF- + Smaller of SF2-, SF1-, AND SUP-

Normal Condition - Primary - Equation EN

L8N = /DW + PL + CS/

Normal condition - Primary + secondary - Equation 11

Lll+ = Larger of 0 and DW + PL +CS +SUP+

L11- = Smaller of 0 and DW + CS + SUP-

Ll1 = Larger of Ll1+ and /Ll1-/

Upset condition - Primary - Equation 9

L9U+ = Larger of 0 and DW + PL + CS + WH+ +/E1/ + vt+L9U- = Smaller of 0 and DW + PL + CS + WH- -/E1/ + VT-

L9U = Larger of L9U+ and /L9U-/

Upset - Primary + secondary

L9S+ = Larger of 0 and DW + PL + CS + SUP+ + WH+ +/E1/

L9S- = Smaller of 0 and DW + P1 + CS + SUP- + VT- + WH- -/E1/ L9S = Larger of L9S+ and /L9S-/

Faulted - Equation 9

L9F+ = Larger of 0 and DW + PL + CS + WH+ + VT+ +/E2/ L9F- = Smaller of 0 and DW + PL + CS + WH- + VT- -/E2/

Faulted = Primary + secondary - Limit

L9T+ = Larger of 0 and DW + PL + CS + SF+ + VT+ + WE+ +/EE/

L9T- = Smaller of 0 and DW + PL + CS + SF- + WH- -/EE/

Figure 1.0 is an example of the final design information format for anchor evaluation.

Anchor loads for time history load cases and for analyses with more than one deadweight loadcase may be unconservative. The following message has been included in the output from ANCHOR to notify the user of this fact.

\*\*\*\*\*\*\*\*\* WARNING \*\*\*\*\*\*

VERSION 3.0 OF THE ANCHOR LOAD PROGRAM CAN GIVE UNCONSERVATIVE RESULTS IF TIME HISTORY LOAD CASES ARE INPUT OR IF MORE THAN ONE DEADWEIGHT LOAD CASE IS INPUT

| 21-80 | 6A10  | COM , | Comments to be printed on special paper.                             |

# Second Joint Name Card

| Column | <u>Format</u> | <u>Variable</u> | Description                              |
|--------|---------------|-----------------|------------------------------------------|
| 1      | A1            | IH              | Data = None                              |
| 2-5    | A4            | JT1             | Joint name                               |
| 21-80  | 6A10          | COM1            | Comments to be printed on special paper. |

# Anchor Global Coordinates Card

| Column | Format | <u>Variable</u> | <u>Description</u>            |
|--------|--------|-----------------|-------------------------------|
| 1-10   | A10    | NA(1)           | Anchor node name              |
| 11-20  | F10.4  | GL(1,1)         | Global X-Coordinate of Anchor |
| 21-30  | F10.4  | GL(1,2)         | Global Y-Coordinate of Anchor |
| 31-40  | F10.4  | GL(1,3)         | Global Z-Coordinate of Anchor |

# Local-x Vector Definition Global Coordinates Card

| <u>Column</u> | <u>Format</u> | <u>Variable</u> | Description            |
|---------------|---------------|-----------------|------------------------|
| 1-10          | A10           | NA(2)           | Inline Point Node Name |
| 11-20         | F10.4         | GL(2,1)         | Global X-Coordinate    |
| 21-30         | . F10.4       | GL(2,2)         | Global Y-Coordinate    |
| 31-40         | F10.4         | GL(2,3)         | Global Z-Coordinate    |

The local-x vector definition global coordinates should specify a point inline to the pipe connected to the pipe. Local-x will be directed from the anchor to this point.

<u>Direction Cosine Cards from TPIPE</u> (one card for each side required)

| <u>Column</u> | <u>Format</u> | <u>Variable</u> | Description                                        |
|---------------|---------------|-----------------|----------------------------------------------------|
| 1             | A1            | IH              | None                                               |
| 2-5           | a4            | JT              | Joint name                                         |
| 10            | 12            | 18              | Anchor side number (1 or 2).                       |
| 11-20         | F10.4         | B(1)            | X<br>xs                                            |
| 21-30         | F10.4         | B(2)            | Y Global projection from xs TPIPE of direction xs. |
| 31-40         | F10.4         | B(3)            | Z<br>xs                                            |
| 41-50         | F10.4         | B(4)            | X<br>ys                                            |
| 51-60         | F10.4         | B(5)            | Y Global projection from ys TPIPE of direction ys. |
| 61-70         | F10.4         | B(6)            | Z<br>ys                                            |
| 71-80         | A10           | C1              | Comment                                            |

These global projections are taken directly from the TPIPE run. These must technically be direction cosines for ANCHOR, so if any one of the TPIPE projections are greater than 1.0, the TPIPE projections must be unitized before entry into ANCHOR.

### Notes:

- 1. Only one load set of data for side is expected. Values are replaced.
- 2. Values from more than one case are enveloped.
- 3. Values from different load cases are added with absolute values.
- 4. Keep the sign of the largest value.
- 5. Values are reversing.

<u>Scale cards</u> Load case to be created by scaling an existing load case (previous input section)

#### 4.0 OUTPUT DESCRIPTION

Appendix D contains a complete listing of an example problem for the ANCHOR program. ANCHOR will print the banner page listing the program title and version number twice. This insures that the banner page will always be the first page of the printout to easily distinguish the run when combined in the calculation package.

ANCHOR provides an input data echo with both an upper and lower column number scale to verify correct entry of data. This is an exact replication of the input data deck and thus also provides verification of the data input.

After the data echo, ANCHOR provides an extensive data check with error checking. The direction cosines which define the local coordinate system for the anchor (calculated from the input global coordinates specified for the anchor and the inline point) are shown relative to the global coordinate system. The angles between these components and the major coordinate axes are also shown. Next are the direction cosines from TPIPE and their respective angles. After listing the loads input from each side, (in the input coordinate system from TPIPE) loads are shown in the global coordinate system for each side and then combined in the global coordinate system. Design loads are then summarized for equations:

8N Normal 11 Normal 9U Upset Upset 9F Faulted Faulted

and rounded using conventions discussed in Section 1.0. Loads are then also presented similarily in the local coordinate system for the anchor. The local coordinate system is defined by ANCHOR based on the anchor and inline points specified. When requested by the analyst, (prompted at execution time) an issuable design load table (referred to as the BPRINT) will be produced. An example of this BPRINT is shown as the last page of Appendix D.

Error Messages which may be listed by ANCHOR are:

- 1. Number of joints exceeds array limit of:\_\_\_\_\_
- 2. Error Wrong key parameter in this section No action.
- 3. Error Wrong analysis type:\_\_\_\_.
- 4. Error Type must be thermal No action.
- 5. Error Joint name card missing or in the wrong sequence.

| 6. | No such analysis type as:                                          |
|----|--------------------------------------------------------------------|
| 7. | No such joint as: is input as a restrained joint.                  |
| 8. | Warning - Local vectors are not orthogonal. Input:,, Calculated:,, |
| 9. | Error - Direction cosine does not equal a unit vector.             |
|    | Error - At least one direction cosine vector is greater than 1.0.  |

#### 5.0 EXAMPLE PROBLEM DESCRIPTION

The example problem in Appendix D is for anchor node point 120 on problem N3-XX-XXX and has loads imposed on it from one side only. Local-x for the anchor is directed from the anchor to node point (or control point) CO1. The local coordinate system is based on the global coordinates specified for these nodes. The local coordinate system defined by ANCHOR indicates that the local coordinate system is: Local-x is Global-Z, Local-y is Global-Y and Local-z is minus Global-X. The loads are convented from a local coordinate system in TPIPE having direction cosines of: -.3214, .7600, -.5567. Loads from the TPIPE PIPING SYSTEMS REACTIONS TABLE are entered with the corresponding load case group ID. Load case S2 is twice load case S1. Loads are reported in the Global and Local systems as discussed in Sections 1.0 and 4.0. The BPRINT (last page of Appendix D) defines the local coordinate system in terms of the inline node point: CO1.

# 6.0 TYPICAL RUN STATISTICS

The ANCHOR program run is submitted interactively. Program execution time will generally be complete in less than 30 seconds wall clock time depending upon the host computer workoad. The CPU time for a typical problem is 2.5 secs. Total SBUs for a typical problem is 5.3 UNTS on the Cyber 175.

# 7.0 EXECUTION INSTRUCTIONS AND REQUIREMENTS

Version 3.0 of the ANCHOR program may be executed interactively on the CDC computer system by typing:

#### -ANCHOR

This procedure file will prompt the user for all information required to execute the ANCHOR program including the input file name, BPRINT options, output disposal, etc.

#### NOMENCLATURE

The following nomenclature and technical concepts are standard throughout the program. Each section of the program has been formulated using these definitions and concepts. Included is a brief description of the calculations required for stress and support load evaluation which are incorporated into the prgram.

# Load Sources

| Symbol | <u>Description</u>                                                               | TPIPE<br>Support<br><u>Type</u> | <u>Notes</u> |

| VT     | Valve thrust (relief force)                                                      | D D                             | 7            |
| WH     | Water hammer - Activates snubbers (directional)                                  | D                               |              |
| EE     | The larger of El and E2                                                          | D                               |              |

#### Notes

- See the directive on evaluating systems connected to the SCV for a discussion of the modeling of these loads. It is assumed the CP/CT are applied sufficiently slow not to activate snubbers.
- 2. The DM load case occurs prior to CP/CT.
- 3. EA will not be run as a separate load case. When the line being analyzed is supported by more than one dynamic support to the SCV, the response spectra for the faulted condition will be the envelope of the SSE spectra and the SCV response spectra due to a LOCA. It will be called E2.
- 4. Jl is a valid load case but will not be considered in the analysis phase.
- The radial and tangential movements of the SCV caused by CT are reversing.
- 6. Preload is a sustained force run consisting of a preload in a spring normally used for deadweight support. The run must use a T deck (which assumes springs do not act) with the preload force applied at the point of the spring installation in the direction of the desired force relief.
- 7. Valve thrust is a suddenly applied load which remains constant in direction and which will initially activate a snubber that will subsequently unload. To analyze this loading sequence requires two runs, a T and a D. This is explained in DED EP 21.12. The loads and moments indicated by "VT" in the equations which follow are actually the enveloped results of the VT (T) and the VT (D) runs.

# Data Type

| Symbol | Description                                       |
|--------|---------------------------------------------------|
| E      | Stress difference (lb/in <sup>2</sup> )           |
| F      | Force (pounds)                                    |
| K      | Design load for lugs (pounds)                     |
| L      | Design load for support (pounds) or (foot-pounds) |
| M      | Moments (foot-pounds)                             |
| N      | Lug stress allowable $(1b/in^2)$                  |
| Q      | Design travel (inches)                            |
| R      | Maximum pipe movement (inches)                    |

- S Stress (lb/in<sup>2</sup>)
- T Ratio N/K (1b/in<sup>2</sup>/pound)

- 9S Upset primary + secondary
- 9T Faulted primary + secondary
- DE Design primary

#### Definitions

- SY = Yield stress of the pipe at design temperature
- $Z = Section modulus = * (mean radius)^2 * the wall thickness (inches<sup>3</sup>)$
- i = Intensification factor (figure NC-3673.2[b]-1)
- $P = Peak pressure (1b/in^2g)$
- $Pr = Design pressure (lb/in^2g)$
- Do = Outside diameter (inches)
- d = Inside diameter (inches)

SH = Hot allowable stress  $(1b/in^2)$ 

 $SC = Cold \ allowable \ stress (1b/in^2)$ 

f = Stress range reduction factor

SA = f(1.25 SC + 0.25 SH) (NC-3611.2)

#### Term Definition

#### AXX<sup>+</sup> means

- (a) A = Data type description
- (b) XX = Load source symbol or equation symbol
- (c) + = Positive design load Is a positive number
  - = Negative design load Is a negative number

#### Support/Load Nomenclature

Primary load - A load which is not self-limiting (DW, [EA], E1, E2, [JI], PL, VT, WH)

Secondary load - A load which is self-limiting (CT, CP, DM, TI, S1, S2)

# Support Categories

Linear - Provides positive stop to movement of a pipe in a particular direction

Standard component - Variable springs, constant force supports or dynamic snubbers

Anchors - Provides positive stop to rotations and deflections in all directions

#### NCR GENCEB8302 RI Attachment 1

#### Description of Condition:

Discrepancies have been found in the input specifications for the direction cosines option of the ANCHOR program. The output could also have been misinterpreted in the wrong coordinate system. This option only affects anchors that are skewed relative to the plant global coordinate system.

The purpose of the anchor load program is to combine the loads from both sides of an anchor, compare these loads to allowables, and provide total loads on the anchor. These loads on each side of the anchor are generally determined by a separate stress analysis computer program. If the loads on each side of the anchor are in different coordinate systems, the direction cosines option of the ANCHOR program must be employed to convert these loads to a consistent coordinate system. This system is referred to as the record coordinate system in ANCHOR. Page III-4 of the ANCHOR program defines these direction cosines from the input system (the system used to define loads in the stress analysis program) to the record system. These input specifications are in error. To be correct, they should define the direction cosines from the record system to the input system.

This subtle difference can best be illustrated with an example. Consider a 10,000  $1b_{\hat{f}}$  load in the x and z directions of the input (I) system as shown in figure 1. If the record (R) system is skewed  $30^{\circ}$  from the input system as shown (common  $Y_{\hat{I}} = Y_{\hat{R}}$  up out of page), it can be shown that these loads resolve into the record system as:

$$F_{x}^{R} = 13,600, F_{z}^{R} = 3,660$$

The ANCHOR manual describes the system relations, relative angles, and direction cosines as:

When input to ANCHOR, it will resolve loads of:

$$F_{x}^{R} = 3,660 \text{ and } F_{z}^{R} = 13,660 ,$$

which are in error. When correctly defined as:

the ANCHOR program will correctly resolve the loads. Since the resultant loads are reported in the record system and must be resolved into global and local loads by similar direction cosines, the anchor load designer could similarly misinterpret the results.

#### NCR GENCEB8302 R1 Attachment 2

#### Corrective Action

BLW units 1 and 2:

No corrective action required -- see remarks.

BFN units 1, 2, and 3: No corrective action required since ANCHOR program has not been used to date.

WBM unit 1:

Anchors have been redesigned per ANCHOR program, version 2.0. Supports have been redesigned and installed.

DIVISION OF ENGINEERING DESIGN VEORMANCE REPORT CEB'840312 003 CENCEB8402 1 REPORT NO. PLANT BEN, SQN, WBN, BLN PREPARER/ORGANIZATION/DATE ing EN DES-CEB/ 3-7-84 DESCRIPTION OF CONDITION ression 2.0 of the ANCHOR program for Errors have been found in us : determining the design loads to ping anchors. The outputs of the global loads from the program are consistive. However, the results of the transformation from global coord: . . system to local coordinate system for who sed anchors (that is, anchor was se local axes are not parallel to one of the global directions) are inservative. It is mainly due to the use of absolute values of the glob , loads. Reversing global loads have not been considered in the process of predinate system transformation. 840604**B**00**76** DATE OF OCCURRENCE EST (X), ACT 1 1 135 Mee Descript on o Condition (Block ) By Thore Of Minet 3 UNIQ CODE (EN DES-EP 8.01) TIM CORRECTIVE ACTION -Correct errors in very section to the ANCHOR Communication Notifies Diping analysis groups of the condition these errors Apples and the first methor load -Request a review of issued and elsage and for food to determined to be unco ervative -Modify any deficient chor sup; rt lesigns. #### **EVALUATION SHEET**

Rev.  $\frac{R2}{11/18/83}$ 

. Task Force Category 7 for Watts Bar Nuclear Plant - Unit 1

2. Task Force Category Description and Related B&V Findings:
Nonconforming conditions in construction of previously inspected and accepted pipe supports: F367, F704, F718, F719, F726, F734, F736, F737, F749, F772, F773, F774, F776, F819, F884, F919, and F920.

#### 3. Evaluation for Cause

- A. Preliminary
  - -On ones involving parts removed after final inspection cause unknown.
  - -On ones involving missing welds and members different than drawing oversight.
  - -On ones involving clearance and out of tolerance cause unknown.
- B. Final
  - -On ones involving parts removed after final inspection cause unknown.
  - -On ones involving missing welds and members different than drawing oversight.
  - -On ones involving clearance and out of tolerance Concur w/A except clearance and out of tolerance problems are usually oversights/additional unknown causes

Resp. Org. Paras Prom. 4/18/83 Task Force Concurrence 1/20/83

- 4. Evaluation for Generic Examples
  - A. Preliminary

It is assumed that these examples exist through all systems.

B. Final

These examples exist through all systems with one generic exception. Bergen-Paterson (B-P) drawing 6000-l authorizes the deletion of internal pipe side welds for box frames comprised of WF members only. The misapplication of this exemption is generic for only B-P drawings and not for TVA or EN DES drawings.

Resp. Org Mauch Romi 4/18/83 Task Force Concurrence 2/2/83

- 5. Licensing Basis Satisfaction
  A. Preliminary
  - Nine of the 17 hangers did not satisfy the licensing basis.
  - B. Final

Based on the premise that "use-as-is" disposition of NCRs will satisfy licensing basis, ten of the seventeen hangers will not satisfy it.

Resp. Org Hermon Glown 4/18/83 Task Force Concurrence 2/2 4 Kol 83

- 6A. Identification and Evaluation of Ongoing Corrective Action for Completed Work
  - A. Preliminary

Corrective action is 79-14 program Phase I as defined by WBN-QCP-4.56. Corrective action is adequate.

B. Final
Concur with 6.A.

Resp. Org Voucol. Man 4/18/83 Task Force Concurrence Iff 4/20/83

- 7A. Identification of Corrective Action for Completed Work
  - A. Preliminary

The plan in 6AA is adequate.

B. Final Concur.

10B. Identification of Corrective Action for Future Work

.United States Government Memorandum

841113T0600 TENNESSEE VALLEY AUTHORITY OMS '841108 201

Quality Management Staff Files

J. W. von Weisenstein, 384 SPB-K

DATE

NOV 8 1984

SUBJECT:

ASSESSMENT OF ADEQUACY OF CORRECTIVE ACTION FOR FUTURE WORK FOR BLACK AND

VEATCH TASK FORCE CATEGORY 7

For this category, the TVA task force for review of Black and Veatch findings determined that the condition was applicable to Watts Bar units 1 and 2 and that corrective action was required for completed and future work. QMS performed a surveillance in accordance with the attached scoping document to assess the adequacy of corrective action implementation for completed and future work, as well as the effectiveness of corrective action for future work. The results of that surveillance, contained in the attached surveillance report, verified the adequacy of the work-accomplished.

However, a concern was identified in the attached report which does not impact the closure of this item but does require action by OE. The NCR WBNSWP8307 form did not contain all the required information as required by EPs 1.26 and 2.02 prior to submittal of the unit 1 final 50.55(e) report to the NRC. The corrective action and action to prevent recurrence sections of this NCR form remain incomplete at this time. The corrective action and action to prevent recurrence sections of the NCR should be completed as soon as possible.

Based upon our assessment of category 7, we conclude that this category can be closed by signing and dating item 12A, "Verification of Effectiveness of Corrective Action for Future Work."

QUALITY MANAGEMENT STAFF SURVEILLANCE REPORT FOR THE ASSESSMENT OF THE EFFECTIVENESS OF CORRECTIVE ACTIONS IDENTIFIED IN THE TASK FORCE REPORT ON THE BLACK AND VEATCH FINDINGS

PLANT: Watts Bar Nuclear Unit CATEGORY:

Approved By:

Concerns: NO / / Yes /X / (if yes, identify below)

Results:

#### Management Summary:

The design processes evaluated are outlined in the attached surveillance scoping document and were determined to be in full compliance with requirements with the following exception:

NCR WBNSWP8307 form did not contain all the required information as required by EPs 1.26 and 2.02 prior to submittal of the unit 1 final 50.55(e) report to NRC. The "corrective action" and "action to prevent recurrence" sections of this NCR form remain incomplete at this time. Also, final response to IE Bulletin 79-14 was delayed for six months before submittal. There appears to be no problem with delay in 79 14 response; however, NCR WBNSWP8307 form should be completed as soon as possible.

#### Conclusions and Recommendations:

Based upon the results of this surveillance, the corrective action implemented for both the completed and future work is adequate, and the effectiveness of corrective action for future work was also adequate. However, even though NCR WBNSWP8307 corrective action has been identified in the unit 1 final 50.55(e) report to NRC, the NCR form remains incomplete; therefore, it is recommended that "corrective action" and "action to prevent recurrence" sections be completed as soon as possible.

#### III. Details:

- A. Performed the following surveillance activities to verify corrective action implementation for completed work:
  - Verify that the deficiencies identified in the Black and Veatch findings have either been corrected or are being tracked.

Results: Interviewed several OE personnel at the Watts Bar site by telephone including: Henry Jones, Tom Brown, Charles Hustler, and Robert McKay about the Black and Veatch findings. Also, James Worthy of OE-MEB-MLS was interviewed about the EM DES MCR. Reviewed the 17 deficiencies listed in the Black and Veatch evaluation sheet for task force category 7 for Watts Bar units 1 and 2. These 17 findings were translated into seven COMST MCRs and one EM DES MCR. These NCRs have been closed out with the exception of one CONST MCR and the EN DES MCR.

Disposition for NCR 4486R has been completed, but NCR has not been closed out.  $\begin{tabular}{ll} \hline \end{tabular}$ 

A final 50.55(e) report has been issued to NRC on the unit 1 part of NCR WBNSWP8307; however, the "corrective action" and "action to prevent recurrence" sections of NCR form have not been completed. This is contrary to requirements of EN DES-EPs 1.26 and 2.02 which indicate that those sections of the form must be completed before the final report is submitted.

2. Verify completed work by sampling.

Results: Reviewed the following NCRs which relate to the designated Black and Veatch findings:

NCR 4454R R1 = F734, F737, F749, F773, and F774

NCR 4455R = F704, F718, F726, F736, F772, and F776

NCR 4478R = F884

NCR 4480R R1 = F919

NCR 4481R R1 = F920

NCR 4486R = F819 (not closed out)

NCR 4535R = F719

NCR WBNSWP8307 = F367 (final 50.55(e) report for unit 1 has been issued; however, appropriate sections of the NCR form have not been completed)

Six were closed and two still open but being tracked.

B. Performed the following surveillance activities to verify corrective action implementation for future work:

Verify inspector training on Bergen-Paterson drawing inspection:

Results: Corrective action on the unit 1 final 50.55(e) report for NCR WBMSWP8307 indicated that Hanger Engineering and Quality Control Units were to receive additional training emphasizing implementation of drawing requirements. Interviewed Robert HcKay of Watts Bar site by phone who indicated that this training had been accomplished but that it would be an ongoing task, especially for new personnel. No records were reviewed at this time.

- C. Performed the following surveillance activities to assess the effectiveness of corrective action for future work:
  - 1. Evaluate the current status of the IE Bulletin 79-14 program:

Results: Interviewed James Ritts, Loretta Cecilia, and William Kagay about response to NRC for Watts Bar portion of IE Bulletin 79-14. William Kagay of CEB indicated that CEB report, "Inspection Summary Report 79-14 Phase II," revision 1, was submitted to NEB-NLS in April 1984. CEB considered this a final response. NEB-NLS felt report was too disjointed and put it on hold. Loretta Cecilia of NEB-NLS reviewed report and submitted response to L. M. Mills during week of October 22, 1984.

 Assess the effectiveness of the IB Bulletin 79-14 program and evaluate this category for closure based upon control by 79-14 or some other rationale.

Results: The IE Bulletin 79-14 program appears to be effective despite inadvertent delay in submitting final response to NRC for Watts Bar portion. NEB-NLS indicated a program for Bellefonte would be devised. The concerns of IE Bulletin 79-14 for Watts Bar have been resolved and the two NCRs relating to Black and Veatch findings, which are not yet closed, are being tracked; therefore, this category can be closed.

|    | <br>                       |                 |

- D. Is action by organization outside EN DES required? Yes No Organization tracking No. CONST NCR 4622 Ro
- E. Has all necessary EN DES information been transmitted to an organization outside EN DES to enable the completion of work required?

  Yes No N/A If yes, list in (C) above.
- F. Is all EN DES action complete? Yes  $\nearrow$  No  $\square$
- G. Remarks:

EN Verified By R. J. Pratt Date 12/7/84

Page \_\_ of

2. Verify that NCR WBNCEB8203 was closed.

Results: NCR WBNCEB8203 was closed by EN DES on May 12, 1983 (CEB 830512 010). NCR WBNCEB8203 final report to NRC was issued May 27, 1983 (NEB 830531 632).

- B. Performed the following surveillance activities to verify corrective action implementation for future work.
  - Verify that training has included the referencing of construction specification N3C-928 on hanger drawings.

Results: Reviewed hanger drawings 47A464-10-18 R1, 47A464-10-17 R1, 47A400-6-17H R1, 47A050-1Q R4, and 47A050-1T R4 to verify if they referenced N3C-928 for the purpose of providing OC with requirements for locating attachments on embedded plates. Hanger drawings reviewed did not contain the correct references to N3C-928. NCR WBNQMS8401 was prepared to document this condition.

2. Verify that training has included the use of EN DES-EP 4.03.

Results: Interviewed Charlie Richardson, WBEP-Mechanical Design, and W. W. Wilson, Jr., WBEP-Civil Design, to verify if they were familiar with the requirements of EN DES-EP 4.03, Appendix No. 4. Each employee knew the requirements of EP 4.03, Appendix No.

Interviewed Doug E. Martin, WBEP Supervisor Civil Design Section, to verify if EP 4.03 training had been conducted in his section and documented in accordance with the requirements of EN DES-EP 1.01, section 10.5. Doug Martin stated the training had been conducted, but he could not locate the required attendance roster. WBEP civil design employees' work observed during this surveillance verified they were familiar with the requirements of EN DES-EP 4.03, Appendix No. 4. Therefore, a recommendation to conduct the EP 4.03 training and to document that training was made to Doug Martin.

On November 2, 1984, Doug Martin conducted EP 4.03 training with employees of his section (WBP 841102 008).

- C. Performed the following surveillance activities to assess the effectiveness of corrective action for future work:
  - Assess the effectiveness of the corrective action for one FCR involving multiple attachments to an embedded plate. Select an FCR which was initiated during 1984.

Results: Reviewed FCR EP6429 to the requirements of project construction specification N3C-928 and EN DES-EP 4.03, Appendix No. 4, with no deviations noted.

Page 2 of 4

The methods used by EN DES to evaluate FCR EP6429 are effective in determining if unique embedded plates have been overloaded by the addition of multiple supports that violates N3C-928 requirements.

SCOPING DOCUMENT FOR THE ASSESSMENT
OF THE EFFECTIVENESS OF CORRECTIVE ACTIONS
IDENTIFIED IN THE TASK FORCE REPORT ON THE
BLACK AND VEATCH FINDINGS

PLANT: Vatts Bar Nuclear Plant Units 1 and 2
CATEGORY: 9

Prepared By: 2 Brock
Date: 9/19/84

Approved By: 42-12-15

I. Verification of Corrective Action Implementation for Completed Work

Perform the following surveillance activity:

Verify the results of the sampling program by sampling one of the 69 embedded plates evaluated. Verify that NCR WBNCEB8203 was closed.

II. Verification of Corrective Action Implementation for Future Work

Perform the following surveillance activity:

Verify that training has included: (a) the referencing of construction specification N3C-928 on hanger drawings and (b) the use of EN DES-EP 4.03.

III. Assessment of Effectiveness of Corrective Action for Future Work

Perform the following surveillance activity:

Assess the effectiveness of the corrective action for one FCR involving multiple attachments to an embedded plate. Select an FCR which was initiated during 1984.

| The program, user's manual, and program manual have been modified to automatically calculate these direction cosines based on more easily attainable plant coordinates. The output has been modified to provide more directly usable local and global loads rather than loads in the record system. The user's manual is being modified to reflect these changes.  These modifications to the program relieve the analyst of the task of computing these coordinate transformations by hand, thus alleviating the confusion regarding these conversions. The output is similarly reported in the global and program—defined local systems, alleviating the need for the anchor designer to perform further coordinate conversions.  Reanalyze all problems which were analyzed using the direction cosines of ANCHOR for all affected plants using version 2.0. Compare anchor loads to the previous design loads and redesign anchors where necessary.  See Attachment 2 for plant specific corrective action. |                                            |  |  |  |  |  |

#### NCR GENCEB8302 R1 Attachment 1

#### Description of Condition:

Discrepancies have been found in the input specifications for the direction cosines option of the ANCHOR program. The output could also have been misinterpreted in the wrong coordinate system. This option only affects anchors that are skewed relative to the plant global coordinate system.

The purpose of the anchor load program is to combine the loads from both sides of an anchor, compare these loads to allowables, and provide total loads on the anchor. These loads on each side of the anchor are generally determined by a separate stress analysis computer program. If the loads on each side of the anchor are in different coordinate systems, the direction cosines option of the ANCHOR program must be employed to convert these loads to a consistent coordinate system. This system is referred to as the record coordinate system in ANCHOR. Page III-4 of the ANCHOR program defines these direction cosines from the input system (the system used to define loads in the stress analysis program) to the record system. These input specifications are in error. To be correct, they should define the direction cosines from the record system to the input system.

This subtle difference can best be illustrated with an example. Consider a 10,000  $1b_f$  load in the x and z directions of the input (I) system as shown in figure 1. If the record (R) system is skewed  $30^\circ$  from the input system as shown (common  $Y_I = Y_R$  up out of page), it can be shown that these loads resolve into the record system as:

$$F_x^R = 13,600, F_z^R = 3,660$$

The ANCHOR manual describes the system relations, relative angles, and direction cosines as:

$$\frac{1}{x}$$
 to  $\frac{R}{x}$   $\frac{1}{x}$  to  $\frac{R}{y}$   $\frac{1}{x}$  to  $\frac{R}{z}$ , respectively.  
30° 90° 120°  
0.8660 0.0 -0.5000

When input to ANCHOR, it will resolve loads of:

$$F_x^R = 3,660 \text{ and } F_z^R = 13,660$$
,

which are in error. When correctly defined as:

the ANCHOR program will correctly resolve the loads. Since the resultant loads are reported in the record system and must be resolved into global and local loads by similar direction cosines, the anchor load designer could similarly misinterpret the results.

#### NCR GENCEB8302 R1 Attachment 2

#### Corrective Action

BLN units 1 and 2:

No corrective action required -- see remarks.

BFN units 1, 2, and 3: No corrective action required since ANCHOR program has not been used to date.

WBN unit 1:

Anchors have been redesigned per ANCHOR program, version 2.0. Supports have been redesigned and installed.

IE-79-14 W LKDOWN

#### 1.0 PURPOSL

1.1 This procedure specifies the inspection and documentation requirements to verify the as-installed configuration of safety-related rigorously analyzed and alternately supported piping systems identified in reference 3.3.

#### 2.0 SCOPE

2.1 This procedure is applicable to the piping systems outlined in reference 3.3.

#### 3.0 REFERENCES

海南

- 3.1 TVA Construction Specification N3C-912, "Support and Installation of Piping Systems in Category I Structures"
- 3.2 WBNP-QCI-4.56, "IE-79-14 Accountability"
- 3.3 EN DES-SEP-82-13, "Program for NRC-OIE Bulletin 79-14, Phase 1
  Inspections at Watts Bar Nuclear Plant, Unit 1"

#### 4.0 DEFINITIONS

- 4.1 <u>Inspection Package</u>—An assembly of drawings pertaining to a specific part of a piping system.
- 4.2 <u>Discrepancy-Any</u> item found not to conform to the applicable EN DES specifications and/or inspection requirements or is inaccessible to complete inspection.
- 4.3 <u>Support</u>--Standard and nonstandard supports utilized in restraining the pipe in any one or a combination of the three orthogonal directions (axial, lateral, vertical).
- 4.3.1 Component Standard Supports-Vendor-supplied items; for example, snubbers, springs, rod hangers, and sway struts.
- 4.3.2 Nonstandard (rigid) Supports—Any structural shape or plate welded around the pipe to provide restraint in any one or a combination of the three orthogonal directions. (The vast majority of the alternate analysis supports falls in this category.)
- 4.4 <u>B001 Pipe Connection</u>—Small branch line connection qualified by B001 support criteria.

Rev. 6

#### 5.0 RESPONSIBILITIES

Title

- 5.1 The Mechanical Quality Control Unit (MQC) is responsible for performing and documenting all inspections related to piping configuration, piping properties, floor and wall penetrations, and valves.
- 5.2 The Hanger Quality Control Unit (HQC) is responsible for performing and documenting all inspections related to piping supports.
- 6.0 PROCEDURE
- 6.1 Test Equipment
- 6.1.1 Measuring tape or rule
- 6.1.2 Level
- 6.1.3 Plumb bob
- 6.1.4 Calibrated ultrasonic thickness measuring equipment
- 6.1.5 Gap (feeler) gauge
- 6.2 Pipe Configuration Inspection-Rigorously Analyzed Piping
- 6.2.1 Starting at one end of the piping segment, visually inspect the piping geometry and size against the EN DES inspection drawing (including the referenced 47B001 type connections).
- 6.2.2 Verify that only those fittings (elbows, reducers, tees) or pipe bends shown on the EN DES inspection drawing are installed.
- 6.2.3 Visually compare the installed location of all valves on the EN DES inspection drawing to the location shown on EN DES inspection drawing. Identify additional or missing valves. Accurately dimension (reference from another feature along the piping run) any discrepancies on the EN DES inspection drawing and record and verify the data listed below on attachment C for a maximum of three of the largest valves inspected.
- 6.2.3.1 TVA tag number
- 6.2.3.2 TVA or W mark number
- 6.2.3.3 Valve drawing number and revision
- 6.2.3.4 Valve type (gate, globe, check, etc.)
- 6.2.3.5 Valve manufacturer

WBNP-QCP-4.56

}ev.\_\_\_\_\_6

6.2.3.6 Manufacturer's identification number

6.2.3.7 Pipe size and material

6.2.3.8 Valve length

6.2.3.9 Type of valve end connection (butt welded or flanged)

6.2.3.10 Type of operator (manual, motor, or air)

6.2.3.11 Operator manufacturer

6.2.3.12 Operator identification number

6.2.3.13 Overall length of valve operator measured from pipe centerline along operator centerline.

6.2.4 Verify by physical measurement all valve operator (manual, motor, or air) orientations shown on the EN DES inspection drawing.

6.2.5 Note as a discrepancy any as-constructed element of valve installation that does not agree with the design documentation.

6.2.6 Using calibrated ultrasonic thickness measuring equipment, measure the pipe wall thickness at a minimum of three locations on the EN DES inspection drawing.

6.2.7 Record data on EN DES inspection drawing.

6.2.8 Verify that the piping passing through any sleeves is located according to reference 3.1. If unacceptable, record vertical and horizontal dimensions between pipe wall and inside of sleeve wall on attachment B and the EN DES inspection drawing. Note any FCR or NCR on the EN DES inspection drawing.

6.2.9 Identify potential interferences with structures, adjacent supports, piping, and piping components. The inspection for interferences includes all branch lines less than 2-1/2 inches in diameter which are not shown on another isometric out to the first rigid support or for a minimum distance of ten linear feet, whichever is less. Where insulation is not in place, identify potential interferences assuming that it is in place. Describe the potential interfering feature and accurately note the location, clearance measurement, and which side of the pipe is closest to interference, on attachment B. Note each discrepancy by number on the inspection drawing. Also note on the inspection drawing if insulation is not installed.

6.2.10 Verify insulation thickness and type shown on EN DES inspection drawing. Report difference in insulation size and type as a discrepancy.

- 6.2.11 Note as a discrepancy any inaccessible piping and the reason for the inaccessibility on the EN DES inspection drawing. Include the inaccessible piping discrepancies in the "miscellaneous" section of attachment B.
- Provide as-constructed data for segments which are not in conformance with the EN DES inspection drawing. If the EN DES inspection drawing differs from the physical piping drawings used for fabrication, record drawing revision showing as-constructed piping geometry. If pipe configuration does not conform to the physical piping drawing, provide as-constructed data on a clear sketch and record the location of the discrepancy on the EN DES inspection drawing. Note additional items such as flanges, strainers, and attachment equipment not shown on the EN DES inspection drawing. Note as a discrepancy any damaged pipe, flexible hose, or bellows on the EN DES inspection drawing.
- 6.2.13 Date and initial all entries made on the EN DES inspection drawing and any as-constructed sketches in 6.2.11.
- 6.3 Support Inspection-Rigorously Analyzed Piping
- 6.3.1 Visually compare installed location of supports with location on EN DES inspection drawing. If installed location does not agree, record the measured location on "A" size support drawing and accurately dimension any discrepancy on the EN DES inspection drawing.
- 6.3.2 Visually verify restraint installed direction with EN DES inspec-
  - Note: Unistrut clamps that act as nonaxial supports have washers installed.
- 6.3.3 Verify installed support type (i.e., spring, snubber, rod, and structural frame) with EN DES inspection drawing.
- 6.3.4 Identify and record as a discrepancy any additional or missing supports.
- 6.3.5 Inspect supports using the individual "A" size support drawing verifying the following items:
- 6.3.5.1 Visually verify all structural members/parts are installed.
- 6.3.5.2 Verify major member length and size are acceptable and record results on the "A" size support drawings and attachments.
- 6.3.5.3 Visually verify weld size and that all specified welds are in place.

Rev. \_\_\_\_6

- 6.3.5.4 Visually verify required anchor bolts are installed and in intimate contact with the attachment plate. Where a washer is used, verify that it cannot be moved by hand.
- 6.3.5.5 Visually verify that required jam nuts, cotter keys, and other locking devices are installed.
- 6.3.5.6 Verify snubber and/or spring can size. Verify by physical measurement the snubber cold set dimension.
- 6.3.5.7 Verify component standard support sizes.
- 6.3.5.8 Verify lug size.
- 6.3.5.9 Verify clearances conform to "A" size support drawing and/or reference 3.1. Record actual clearance (axial, lateral, and vertical) on the "A" size support drawing and attachment E.
- 6.3.5.10 Visually verify that there is no obvious physical damage to the support.
- 6.3.6 Note any inaccessible supports as a discrepancy and the reason for the inaccessibility on the EN DES inspection drawing and record in the "Miscellaneous" section of attachments D and E.
- 6.3.7 Record all discrepancies noted on the "A" size support drawing. If no discrepancies are noted, so indicate on the "A" size support drawing. The results of the individual support inspection are also recorded on the EN DES inspection drawing by either entering an assigned discrepancy tracking number (obtained from the Responsible Engineering Unit) or, in the case of no discrepancies, placing a check mark next to the support mark number. Date and initial all entries on the EN DES inspection drawing and the "A" size support drawing.
- 6.3.8 Record inspection data on attachment E.
- 6.4 Pipe Configuration Inspection--Alternately Supported Pipe
- 6.4.1 Starting at one end of the pipe segment, visually check pipe configuration and size against the physical piping drawings (including B001 type connections in this inspection). Accurately sketch and dimension differences between the installed piping and the physical piping drawing.
- 6.4.2 Visually compare the installed location of all valves in accordance with physical piping drawing to location shown on physical piping drawing. Identify additional, missing, or mislocated valves. Accurately dimension any discrepancies on the physical piping drawing. Verify and record the data listed below on attachment C for a maximum of three of the largest valves inspected.

- 6.4.2.1 TVA tag number
- 6.4.2.2 TVA or W mark number
- 6.4.2.3 Valve drawing number and revision
- 6.4.2.4 Valve type (gate, globe, check, etc.)
- 6.4.2.5 Valve manufacturer
- 6.4.2.6 Manufacturer's identification number
- 6.4.2.7 Pipe size and material
- 6.4.2.8 Valve length
- 6.4.2.9 Type of valve end connection (butt welded or flanged)
- 6.4.2.10 Type of operator (manual, motor, or air)
- 6.4.2.11 Operator manufacturer
- 6.4.2.12 Operator identification number
- 6.4.2.13 Overall length of valve operator measured from pipe centerline along the operator centerline.
- 6.4.3 Verify by physical measurement all valve operator (manual, motor, or air) orientations shown on the physical piping drawing.
- 6.4.4 Note as a discrepancy any as-constructed element of valve installation that does not agree with the design documentation.
- 6.4.5 Using calibrated ultrasonic thickness measuring equipment, verify the pipe wall thickness for a minimum of three locations on the physical piping drawing and record the data on the physical piping drawing.
- 6.4.6 Verify that the pipe is located in sleeves according to reference 3.1. If unacceptable, record vertical and horizontal dimensions between pipe wall and inside of sleeve wall on attachment B and the physical piping drawing. Note any FCR or NCR on the physical piping drawing.

- Identify potential interferences with structures, adjacent supports, piping, and piping components. The inspections for interferences includes all branch lines less than 2-1/2 inches in diameter which are not shown on another isometric out to the first rigid support or for a minimum distance of ten linear feet whichever is less. Where insulation is not in place, identify potential interferences assuming that it is in place. Describe the potential interfering feature and accurately note the location, clearance measurement, and which side of the pipe is closest to interference, on attachment B.

  Note each discrepancy by number on the inspection drawing. Also note on the inspection drawing if insulation is not installed.
- 6.4.8 Record installed insulation thickness and type on the physical piping drawings.
- 6.4.9 Note as a discrepancy any inaccessible piping and the reason for the inaccessibility on the physical piping drawing and record in the "miscellaneous" section of attachment B.
- 6.4.10 Provide as-constructed data for pipe segments which are not in conformance with the physical piping drawing on a clear sketch.

  Record the location of the discrepancy on the physical piping drawing. Note additional items such as flanges, strainers, and attached equipment not shown on the physical piping drawing. Note as a discrepancy any damaged pipe, flexible hose, or bellows on the physical piping drawing.
- 6.4.11 Date and initial all entries made on the physical piping drawing and any as-constructed sketches in 6.4.9.
- 6.5 Support Inspection--Alternately Supported Piping
- 6.5.1 Visually compare installed location of supports with location on the physical piping drawing. If installed location does not agree, record installed location on "A" size support drawing and accurately dimension any discrepancy on the physical piping drawing.
- 6.5.2 Visually verify restraint installed direction with the "A" size support drawing.

Note: Unistrut clamps that act as nonaxial supports have washers installed.

- 6.5.3 Verify installed support type (i.e., spring, snubber, rod, and structural frame) with the "A" size support drawing.
- 6.5.4 Identify and record additional or missing supports.

- 6.5.5 Inspect supports using the individual "A" size support drawing, verifying the following items:
- 6.5.5.1 Visually verify all structural members/parts are installed.

- 6.5.5.2 Verify major member length and size are acceptable and record results on the "A" size support drawings and attachment E.
- 6.5.5.3 Visually verify weld size and that all specified welds are in
- 6.5.5.4 Visually verify required anchor bolts are installed and in intimate contact with the attachment plate. Where a washer is used, verify that it cannot be moved by hand.
- 6.5.5.5 Visually verify that required jam nuts, cotter keys, and other locking devices are installed.
- 6.5.5.6 Verify snubber and/or spring can size. Verify by physical measurement the snubber cold set dimension.
- 6.5.5.7 Verify component standard support sizes.
- 6.5.5.8 Verify lug size.
- 6.5.5.9 Verify clearances conform to "A" size support drawing and/or reference 3.1. Record actual clearance (axial, lateral, and vertical) on the "A" size support drawing and attachment E.
- 6.5.5.10 Visually verify that there is no obvious physical damage to the support.
- 6.5.6 Note any inaccessible supports as a discrepancy and the reason for the inaccessibility on the physical piping drawing and record in the "Miscellaneous" section of attachments D and E.
- 6.5.7 Record all discrepancies noted on the "A" size support drawing. If no discrepancies are noted, so indicate on the "A" size support drawing. The results of the individual support inspection are also recorded on the physical piping drawing by either entering an assigned discrepancy tracking number (obtained from REU) or in the case of no discrepancies, placing a check mark next to the support mark number; date and initial all entries on the physical piping drawing and the "A" size support drawing.
- 6.5.8 Record inspection data on attachment E.

WBNP-QCP-No. 4.56

Rev. 6

## 7.0 ACCEPTANCE CRITERIA

### 7.1 Rigorously Analyzed Piping Systems

- 7.1.1 Rigorously analyzed piping location and configuration meet the requirements of the EN DES analysis isometric and reference 3.1.
- 7.1.2 The installed configuration and location of valves are in accordance with the EN DES analysis isometric. A difference in valve operator orientation greater than 15 degrees from the EN DES analysis isometric requirement is considered a discrepancy.
- 7.1.3 The installed location and configuration of supports meet the requirements of the EN DES analysis isometric, the "A" size support drawing, and reference 3.1.

#### 7.2 Alternately Supported Piping Systems

- 7.2.1 Alternately analyzed piping location and configuration meet the requirements of the physical piping drawing and reference 3.1.
- 7.2.2 The installed configuration and location of valves are in accordance with the physical piping drawing. A difference in valve operator orientation greater than 15 degrees from the physical piping drawing requirement is considered a discrepancy.
- 7.2.3 The installed location and configuration of supports meet the requirements of the physical piping drawing and reference 3.1.
- 7.3 Required rework is performed in accordance with the corrective action defined by the REU and/or EN DES on the applicable inspection data sheet.

#### 8.0 DOCUMENTATION

- 8.1 Each inspection package is assigned a unique identifier number by the REU in accordance with reference 3.2.
- 8.2 Each discrepancy noted against an individual inspection package is assigned a unique discrepancy tracking number by the REU in accordance with reference 3.2.
- 8.3 Required rework is inspected and documented in accordance with the applicable Quality Control Procedure (QCP).
- 8.4 Inspection results are summarized on attachment B for piping and valves and attachment D for supports by the Responsible Quality Control Unit (RQC).

- 8.5 When the required rework is complete and acceptable, the RQC initials and dates the "acceptance" section of the applicable attachment for each discrepancy. When all discrepancies are resolved for the pipe and/or support section of the inspection package the RQC signs and dates the "final acceptance" section of the applicable attachment and the applicable section of attachment A. Individual pipe support inspections are also signed and dated by the RQC in the "final acceptance" section of attachment E. Attach the "A" size support drawing to the applicable attachment E.
- 8.6 Attachments A, B, C, D, and E are Life of Plant (LOP) documents. All attachments and drawings are maintained in the inspection package.

  When all inspections are complete and accepted, the entire inspection package is transmitted to the Document Control Unit (DCU) for review and storage.

#### **EVALUATION SHEET**

Rev. R2 Date  $\frac{R2}{1/24/84}$ 

1. Task Force Category 9 for Watts Bar Nuclear Plant - Unit 1

2. Task Force Category Description and Related B&V Findings:

Failure to adequately control and evaluate embedded plate capacity when multiple attachments were made to the plate by Construction: F506, F710, F711, F712, F713, F724R1, F730R1, F731R1

- 3. Evaluation for Cause
  - A. Preliminary
    - EN DES procedures did not control or address the addition of attachments to embedded plates by Construction.
    - Installation requirements and acceptance criteria on design output documents were not adequate (construction specifications and drawings).
  - B. Final

Same as Preliminary.

Resp. Org. WBP 7/20/83 Task Force Concurrence Holling 7/20/83

- 4. Evaluation for Generic Examples
  - A. Preliminary

This finding applies to all embedded plates.

B. Final

Same as Preliminary.

Resp. Org. WBP 7/20/83 Task Force Concurrence 720/83

| 5. | Licens | ing | Basis | Satis | sfac | tion |
|----|--------|-----|-------|-------|------|------|
|----|--------|-----|-------|-------|------|------|

- A. Preliminary
  Licensing basis is satisfied thus far since the B&V findings and the sampling
  program performed to date has not identified any examples of embedded
  plates where failure would occur. Until the sampling program is
  completed, a potential exists for the licensing basis not being satisfied.
- B. Final

Licensing basis is satisfied since neither the B&V findings nor the sampling program identified any plates in the sample that were structurally inadequate.

- 6A. Identification and Evaluation of Ongoing Corrective Action for Completed Work
  - A. Preliminary
    The corrective action for NCR WBN CEB 8203 is a sample of 69 embedded plates
    to evaluate if a failure would occur in a worst case situation. Based on the
    results of the sample, further corrective action may be required. This approach
    is adequate.
  - B. Final

The corrective action for NCR WBNCEB8203 to sample 69 embedded plates was completed. No further corrective action is required.

- 7A. Identification of Corrective Action for Completed Work
  - A. Preliminary

The plan in 6AA appears to be adequate.

B. Final

Identification of corrective action for completed work is not required as all 69 sampled embedded plates were found to be structurally adequate.

SUBJECT:

ASSESSMENT OF ADROUACY OF CORRECTIVE ACTION FOR FUTURE WORK FOR BLACK AND

VEATCH TASK FORCE CATEGORY 9

For this category, the TVA task force for review of Black and Veatch findings determined that the condition was applicable to Watts Bar units 1 and 2 and that corrective action was not required for completed work, but was required for future work. The TVA task force decision that no corrective action was required for completed work was based on the results of a sample of 69 embedded plates which were found to be structurally adequate.

In the interest of in pendently confirming the decision that no corrective action was required for completed work, QMS performed a surveillance in accordance with the attached scoping document which treated the work associated with the sample as corrective action for completed work. The results of that surveillance, contained in the attached surveillance report, verified the adequacy of the corrective action implementation and effectiveness for future work. However, a concern was identified in the attached report affecting the implementation and effectiveness of corrective action for future work. That concern relates to a deviation from the requirements of EP 3.04, section 3.1, and the proper referencing of construction specification N3C-928 on the appropriate construction and installation drawing. This deviation has been documented on NCR WBNQMS8401 thus permitting closure of this category.

Based upon our assessment of category 9, we conclude that this category can be closed by signing and dating item 12A, "Verification of Effectiveness of Corrective Action for Future Work."

QUALITY MANAGEMENT STAFF
SURVEILLANCE REPORT FOR THE ASSESSMENT
OF THE EFFECTIVENESS OF CORRECTIVE ACTIONS
IDENTIFIED IN THE TASK FORCE REPORT ON THE
BLACK AND VEATCH FINDINGS

PLANT: Watts Bar Nuclear Plant Units 1 and 2
CATEGORY: 9

Prepared By: Sand Puku Approved By: Date:

Concerns: NO  $/\overline{X}$  / Yes  $/\overline{\phantom{X}}$  / (if yes, identify below) Results:

I. Management Summary: The design processes evaluated are outlined in the attached surveillance scoping document, and they comply with requirements except in the area of project construction specification N3C-928 properly being referenced on construction drawings which deviate from EP 3.04 requirements.

NCR WBNQMS8401 identifies a deviation from the requirements of EP 3.04, section 3.1, and OE-WBEP properly referencing construction specification N3C-928 on the appropriate construction or installation drawing. This deviation affects implementation and effectiveness of corrective action for future work.

II. Conclusions and Recommendations: Based upon the results of this surveillance, the corrective action for completed work was found to be effective. In addition, the corrective action for future work was also found to be effective although the OE-WBEP does not properly reference construction specification N3C-928 in applicable construction drawings. This conclusion was reached as a result of the completion of an evaluation of the change control design process (FCRs) involving attachments to embedded plates.

#### III. Details:

- A. Performed the following surveillance activities to verify corrective action implementation for completed work:
  - Verify the results of the sampling program by sampling one of the 69 embedded plates evaluated.

Results: Reviewed the calculations for attachments to embedded plate mark No. MK61C. This calculation covered pages 17-51C of a 356-page package (SWP 830214 024). Drawing 48N1213-1 covers this plate. The approach used to determine loads on these embedded plates appears to be adequate.
