U.S. Nuclear Regulatory Commission

Washington, D.C. 20555

Dear Ms. Adensam:

In the Matter of the Application of Tennessee Valley Authority

Docket Nos. 50-390 50-391

Please refer to my letter to you dated April 26, 1985 concerning NUREG-0737, Item II.F.1, unit 2 shield building stack radiation monitor. We previously estimated an installation date of August 21, 1985 for the unit 2 shield building stack monitors. Because of delays in procurement and changes in design per WB-DCR-588, the unit 2 shield building stack radiation monitors will not be installed until September 30, 1985. The equipment required to complete the installation is currently scheduled to arrive onsite September 20, 1985. NRC has previously indicated that not having the monitors installed until 100-percent power was acceptable as long as an alternate means of radiation monitoring is provided. Considering the current projection for fuel loading, the milestone will be reached.

If there any questions, please get in touch with K. P. Parr at FTS 858-2682.

Very truly yours,

TENNESSEE VALLEY AUTHORITY

A. Domer, Chief
