APR 28 1990

Docket Nos. 50-390, 50-391  
License Nos. CFP-91, CFP-92

Mr. Oliver D. Kingsley, Jr.  
Senior Vice President, Nuclear Power  
Tennessee Valley Authority  
6N 38A Lookout Place  
1101 Market Street  
Chattanooga, TN 37402-2801

Dear Mr. Kingsley:

SUBJECT: INFORMATION REGARDING INTERPRETATION OF BIOASSAY MEASUREMENTS

This is to provide you information regarding the interpretation of bioassay measurements to assess intakes of radioactive material. Enclosed is an NRC memorandum which updates a position taken in Information Notice 82-18, "Interpretation of Bioassay Measurements; Assessment of Intakes." This NRC memorandum specifies that assessment of individual intakes using bioassay data should be based on the best data and models available for that purpose rather than the models in place at the time the NRC regulations in 10 CFR Part 20 were implemented.

If you have any questions on the above, you may wish to call D. M. Collins at 404-331-5586.

Sincerely,

151

Bruce A. Wilson, Assistant Director  
for Inspection Programs  
TVA Projects Division  
Office of Nuclear Reactor Regulation

Enclosure:  
Memorandum dated March 14, 1990

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

March 14, 1990

MEMORANDUM FOR: Those on the Attached List

FROM: LeMoine J. Cunningham, Chief  
Radiation Protection Branch  
Division of Radiation Protection  
and Emergency Preparedness  
Office of Nuclear Reactor Regulation

SUBJECT: DRAFT NRC INFORMATION NOTICE, "INTERPRETATION  
OF BIOASSAY MEASUREMENTS; ASSESSMENT OF INTAKE"

In a July 13, 1988 memorandum, I informed you that we had decided not to issue the enclosed draft information notice which had been prepared after resolution of NRC headquarters and regional office comments on earlier drafts. (Note: The technical contacts have been updated on the enclosed copy of the draft.)

A primary reason for this decision was that a regulatory guide endorsing the use of NUREG/CR-4884, "Interpretation of Bioassay Measurements," was to have been issued within a few months and we intended to have that guide incorporate the message in the enclosed draft information notice concerning the incorrect "position" in Information Notice No. 82-18. That regulatory guide has not been issued and, although the guide is still under development, we do not expect it to be issued in the near future.

We have reconsidered issuing the enclosed draft notice; however, we again have decided not to do so primarily because the regulatory guide incorporating the information is still planned and because the importance of the information contained in the enclosed draft is below the current threshold of importance sufficient to warrant issuance of an NRC information notice. However, to make this information available to the public, we are placing a copy of this memorandum enclosure in the public document room. Therefore, you are free to transmit copies to licensees if you so desire.

WASHINGTON, D.C. 20555

*Enclosure*

June xx, 1988

NRC INFORMATION NOTICE NO. 88-XX: INTERPRETATION OF BIOASSAY MEASUREMENTS;  
ASSESSMENT OF INTAKES

Addressees:

All nuclear power reactor facilities holding an operating license or a construction permit, research and test reactors, fuel facilities, and Priority I material licensees.

Background and Purpose:

This information notice is intended to correct an NRC position in Information Notice 82-18 (Reference 1) that was in conflict with the NRC staff position published in several regulatory guides. The NRC position in Information Notice 82-18 indicates that, for purposes of determining compliance with the 10 CFR Part 20 intake limits, only the methodology of the International Commission on Radiological Protection (ICRP) Publication 2 (Reference 2) can be used in assessing intakes of radioactive material using bioassay data. Another purpose of this 1988 information notice is to call attention to a comprehensive new manual prepared for the NRC that can be used to compute intakes from both in vivo and in vitro bioassay measurements, "Interpretation of Bioassay Measurements," (NUREG/CR-4884). It is expected that recipients will review the information in this information notice for applicability to their programs. However, suggestions contained in this information notice do not constitute NRC requirements; therefore, no specific action or written response is required.

Discussion:

The NRC staff position with respect to bioassay is presented in NRC Regulatory Guides 8.9, 8.11, 8.20, 8.22, and 8.26. In general, the position is that assessment of individual intake using bioassay data should be based on the best data and models available for that purpose.

IE Information Notice 82-18, "Assessment of Intakes of Radioactive Material by Workers," issued in 1982, pointed out that the present NRC limits on intake are based on ICRP Publication 2 and concluded with the NRC position: "The NRC will continue to use the ICRP Publication 2 methodology in determining compliance with 10 CFR 20 until the revision of 10 CFR 20 has been published as a final rule."

**DRAFT**

**DRAFT**

IN 88-XX  
June xx, 1988  
Page 2 of 3

The NRC staff now recognizes that this position in Information Notice 82-18 (1) is incorrect in implying that only ICRP Publication 2 can be used for assessing bioassay data to determine compliance with 10 CFR Part 20 and (2) conflicts with the NRC staff position expressed in relevant regulatory guides. Although ICRP Publication 2 provides the basis for current 10 CFR Part 20 limits on intake (based on long-term, chronic exposures), it does not always provide an adequate basis for assessing individual intake because it does not provide information on body content or excreta following single (acute) intake or information applicable to an individual differing from the "standard man" defined in ICRP Publication 2. This inadequacy is recognized in ICRP Publications 10 and 10A (References 3 and 4), which are endorsed in Regulatory Guide 8.9 and which are mentioned in Information Notice 82-18 as being used by the NRC to evaluate bioassay data to determine compliance with regulatory requirements.

The NRC staff became aware of the problem with the NRC position in Information Notice 82-18 as a result of reviews and discussions during (its draft stage) of a draft report, "Interpretation of Bioassay Measurements" (Reference 5), prepared by Brookhaven National Laboratory (BNL) under an NRC contract. This report (which was published in July 1987) is a comprehensive manual that, for the first time, provides information on how to compute intakes from both in vivo and in vitro bioassay measurements and contains tables for the interpretation of bioassay results, in terms of intake, for several hundred nuclides. This manual conforms to the positions in existing regulatory guides, and the computed intake retention fractions in the report have been verified by comparison with results generated by other computer models using the same set of assumptions (REMEDY and DOSEDAY/DOSEYR). The use of this report, with its straightforward methodology, could help licensees avoid the difficulties associated with the use of the methodology in ICRP Publication 2.

The NRC plans to issue, for comment, a draft regulatory guide that would endorse the BNL report for use in assessing intakes of radioactive material from the results of bioassay measurements. In the interim, use of this report for the interpretation of bioassay measurements is consistent with the regulatory positions in existing regulatory guides on bioassay; therefore, the report may be used for this purpose. Of course, the limits on intake given in 10 CFR 20.103 and based on ICRP Publication 2 continue to apply until they are changed in a revision of 10 CFR Part 20. Furthermore, to the extent it is applicable, ICRP Publication 2 may continue to be used for assessing intakes of radioactive material for comparison with the intake limits of 10 CFR Part 20.

**DRAFT**

No specific action or written response is required by this information notice. If you have any questions about this matter, please contact the regional administrator of the appropriate regional office or this office.
