Gentlemen:

In the Matter of the Application of)
Tennessee Valley Authority)

Docket No. 50-390

WATTS BAR NUCLEAR PLANT (WBN) UNIT 1 - ADVERSE TREND OF FOREIGN MATERIAL
IN PLANT SYSTEMS - WBRD-50-390/91-03 - EXTENSION OF FINAL REPORT

The subject deficiency was initially reported to NRC Region II on February 15, 1991, in accordance with 10 CFR 50.55(e) as Condition Adverse to Quality Report WBP 910145 Revision 0 (now WBP 910145SCA). TVA provided an interim report on March 20, 1991. In that report TVA committed to evaluate the extent of the subject deficiency and determine which systems require cleaning/flushing or other actions to ensure systems are clean. TVA expected to submit a final report by October 3, 1991, to summarize the assessment results and the schedule for required corrective actions.

However, due to the decision to replace the TVA workforce for this activity with contract personnel, work efforts to complete system assessments and define which systems require cleaning/flushing have been postponed. TVA now expects to complete the assessments and submit a final report for this deficiency by April 30, 1992.

If there are any questions, please telephone P. L. Pace at (615) 365-1824.

Very truly yours,

TENNESSEE VALLEY AUTHORITY

John H. Garrity
