Washington, D.C. 20555

Gentlemen:

In the Matter of the Application of)
Tennessee Valley Authority) Docket Nos. 50-390
50-391

WATTS BAR NUCLEAR PLANT (WBN) UNITS 1 AND 2 - DEFICIENCY IN THE
INSTALLATION OF 480 VOLT SHUTDOWN TRANSFORMERS BUSHING CONDUCTORS -
WBRD-50-390/91-26, WBRD-50-391/91-26 - SECOND INTERIM REPORT

The subject deficiency was initially reported to NRC Inspector A. R. Long on May 21, 1991, in accordance with 10 CFR 50.55(e) as Problem Evaluation Report WBPEN910287 (presently, Significant Corrective Action Report WBSA910248). An interim report was submitted on June 20, 1991. In the interim report, TVA stated that a final report would be submitted by December 16, 1991, based on a vendor evaluation of this condition. Due to concerted focus on construction restart issues, the contract for the vendor analysis has not been awarded, thus impacting the final report date. The final report will now be submitted by May 21, 1992.

If there are any questions, please telephone P. L. Pace at (615) 365-1824.

Sincerely,

JH Garrity
John H. Garrity
