APPLICANT: Tennessee Valley Authority

FACILITY: Watts Bar Nuclear Plant, Units 1 and 2

SUBJECT: SUMMARY OF ICSB ORIENTATION MEETING

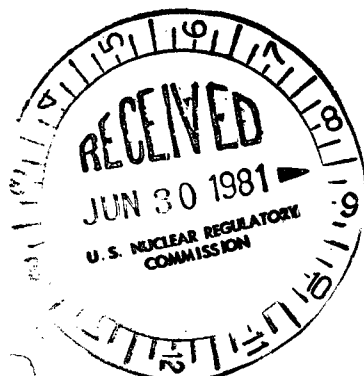

On May 21, 1981, a meeting was held at the NRC offices in Bethesda, Maryland to discuss the methods to be used and schedules for the ICSB review of the Watts Bar Nuclear Plant. Attendees are listed in Enclosure (1).

Mr Dunning stated that the approach described in a letter sent to TVA on May 20, 1981 is being used to expedite the review process. During the meeting, it was pointed out that some of the questions were already being asked of Westinghouse in the SNUPPS review and that, where applicable, the answers given for SNUPPS could be referenced for the Watts Bar Review.

TVA agreed to attempt to send specific NUREG-0737 responses in draft form to assist in our review.

Concern was raised by TVA regarding the use of the Sequoyah/Watts Bar comparison. ICSB stated that the Sequoyah/Watts Bar comparison will be considered in the review, but that, due to the extensiveness of the review and the fact that the reviewer is new, some areas will need to be recovered in an effort to educate the reviewer in that short amount of time allowed for the review. TVA stated that they agree to educate the reviewer as requested, but that if they feel some of the questions should not be extensively answered due to the applicability of the comparison, they may request further consideration of the question.
