APPLICANT: Tennessee Valley Authority

FACILITY: Watts Bar Nuclear Plant, Units 1 and 2

SUBJECT: SUMMARY OF MTEB MEETING REGARDING GDC-51 COMPLIANCE

On May 26, 1981, a meeting was held at the TVA West Towers in Knoxville, Tennessee to discuss compliance of the containment pressure boundary of the Watts Bar Nuclear Plant with GDC-51. Attendees are listed in Enclosure (1).

Mr Halipatz explained the methods used in his review and the reasons for his methodology. He reviewed the Bill of Materials and P&IDs of the main feedwater and main-steam systems supplied by TVA and pointed out the hardware for which he needs to review the certification sheets (NPP-1 and NPV forms) from the vendor. Mr. Halipatz explained what areas he was concerned with regarding the containment flued heads, and penetrations to the containment (personnel locks, air locks, piping) and requested to see code data report forms on these areas.

TVA agreed to provide available information to supplement the NRC review by the middle of June. The applicant cautioned, however, that all of the requested information may not be available, of which we would be notified.
