To Whom It May Concern:

Enclose please find over 350 signatures from Georgia citizens and others from the Southeast region who oppose a nuclear expansion in Georgia that includes the possible construction of two new nuclear reactors at Plant Vogtle in Burke County, Georgia.

We also copied these signatures and contact information into a typed document which is in our office if you should need to verify any of the names. We decided to submit copies of the original handwritten signatures for your perusal.

Atlanta WAND stands opposed to the construction of new nuclear reactors at Plant Vogtle, or anywhere in Georgia.

We have submitted formal comments on line and our members have testified at hearings in Waynesboro.

We sincerely hope that you will revisit the permitting application process and deny Southern Company the permit for these reactors. We believe it is the only sensible and precautionary thing to do.

Sincerely,

*Bobbie Paul*

## No More Nuclear Power in Georgia

We, citizens of the United States, and residents of Georgia are opposed to the development of any new nuclear power facilities in Georgia. We oppose new nuclear reactors based on safety concerns, potential health and environmental health impacts, the high costs involved, the strain and threat to our water resources, and the creation of a radioactive waste that has no safe storage, transport or disposal options.

Viable alternatives to nuclear power exist. We call for Georgia officials and industries to abandon the pursuit of new nuclear facilities and to invest in clean energy through alternative technologies, efficiency and conservation initiatives.

# A SAFE AND HEALTHY ENVIRONMENT FOR ALL!

Please Stop the Subsidizing of New Nuclear Reactors in Georgia

We, citizens of the United States, and residents of the state of Georgia are opposed to the development of any new nuclear power facilities in Georgia. We oppose new nuclear reactors based on safety concerns, potential health and environmental impacts, the high costs involved, the strain and threat to our water resources, and the creation of a radioactive waste that has no safe storage, transport, or disposal options.

Viable alternatives to nuclear power exist. We call for Georgia and industries to abandon the pursuit of new nuclear facilities and to invest in clean energy through alternative technologies, efficiency and conservation initiatives.
