Subject: Re: Davis-Besse FOIA Requests

Eric,

Good. In light of this change, Branch 1 has nothing for the FOIA.

-Mark

Good news.

The second FOIA request associated with the NRC's oversight of boric acid leakage and corrosion control at Davis-Besse during the April 2000 refueling outage **has been resolved**.

No further action on this request is necessary.

Please continue to review the first request associated with the Exponent Report as this request is still active.

Eric.

To all,

Please find attached two (2) FOIA requests associated with Davis-Besse.

The first request is associated with the Exponent Report.

The second request is associated with the NRC's oversight of boric acid leakage and corrosion control at Davis-Besse during the April 2000 refueling outage.

At this point in the process, we have only been requested to provide estimates (search time, review time, and amount of records) on the subject material we may have in our possession.

Because FOIA requests are of high priority, the due date for this estimate is this Friday, May 4.

Although the requested information is associated with Davis-Besse in Branch 6, I thought it prudent to make all of the DRP branch chiefs aware of the request in the event that there is material that is subject to this request in your possession.

Please respond to me as soon as you can so I can complete the estimate by the May 4 due date. If you do not have any records, please respond accordingly.

Eric.
