TO: ENVIRONMENTAL IMPACT STATEMENT COMMENTS ON VOGTLE

FR: GENE STILP, 1550 FISHING CREEK VALLEY ROAD, HARRISBURG, PA  
17112

DA: 12-28-07

PLEASE ADD MY COMMENTS TO THE COLLECTION OF COMMENTS IN  
THE VOGTLE CASE AND KEEP ME INFORMED FROM THIS POINT ON  
THROUGH EMAIL AND PHYSICAL DOCUMENT.

As a citizen within the impact zone of Three Mile Island and as the former chairperson of Three Mile Island Alert and the former director of Three Mile Island Public Interest Resource Center and the former coordinator of No Nukes Pennsylvania, I would like to specifically add my comments. The use of limited federal funds will again impact the ongoing efforts at all current nuclear plants across the United States because less resources at the Federal level will be spread among the needs of existing plants and new plants including the plant which is the subject of this EIS. The onsite storage issue is also a critical element in the EIS. The transportation issue as related to nuclear waste transport must be considered for the life of the plant and also for the license extension period because license extension is a given at the NRC not a debatable question. The possibility of out-of-country ownership (to whatever percentage possible under current law) is critical to the EIS for many reasons including the ability of the Federal government to enforce necessary impact laws if events that occur affect the environment. The unknown financial resources of whatever future owner must be considered as a possible impact angle in this EIS. The one hundred year forecast, fifty year forecast and twenty year for regional drought must be part of this EIS. Water usage priorities for the region must be considered under federal law according to established need. Destination of the power produced must also be a consideration and the transportation corridors for that power and the corridors impact.

PLEASE ADD THE FOLLOWING CONSIDERATION TO MY LIST. OF  
COMMENTS

€ TERRORISM AND INSIDER SABOTAGE are not considered in the Vogtle EIS. This uniquely dangerous location has the whole of Augusta, Aiken, Savannah River Site and Barnwell within the 50-mile Vogtle radiation emergency zone. Even without adding two new reactors the area has a uniquely high concentration

of dangerous nuclear facilities. The NRC is under increasing pressure to take up the terrorism issue, having been ordered to by the Ninth Circuit in California. Point of fact, DOE decided in December 2006 to consider terrorism and insider sabotage at all new DOE facilities, both nuclear and non-nuclear so it's high time NRC gets on board.

€ WATER (local impacts) Neither the water vapor (classified as air pollution under Clean Water Act) nor the heat vented into the local environment have been considered in the EIS. Of the enormous heat generated by Vogtle (and all) reactors, only 1/3 is used for energy, the other 2/3 is vented into the local environment as steam and heated water. This local impact must be considered.

€ WATER (downstream impacts) While the EIS acknowledges saltwater intrusion into the groundwater serving downstream communities such as Bluffton and Hilton Head, South Carolina, due to heavy upstream use of the Savannah River, it states that the communities will just have to switch to river water! This is unacceptable. To sign off on letting Vogtle 3 & 4 exacerbate saltwater intrusion at the mouth of the Savannah River is an unacceptable position.

€ NUCLEAR WASTE The EIS fails to analyze the likelihood that nuclear waste will remain on the site indefinitely due to the failure of the national repository program (Yucca Mountain). In analyzing long-term storage of high-level spent nuclear fuel, it should utilize the concepts put forth for hardened robust dry cask above-ground storage as put forth in the position paper <sup>3</sup>Principles for Safeguarding Nuclear Waste at Reactors.<sup>2</sup> (NOTE: This paper was submitted into the record by Nuclear Watch South)

€ ALTERNATIVES The EIS is required to consider alternatives to the proposed project. The EIS analyzes only conventional, large, centralized power sources, such as coal, oil, hydro. In its analysis of renewables it dismisses wind and solar power as not suitable to 1,000 megawatt power plant use. The fair alternative to consider is decentralized renewables leased to individual electricity users: businesses, residents and industries. The power company would establish a profitable program which integrates power production directly with the area being served. Hooked to the grid, the customer who uses less electricity than it generates sells the excess power directly to the power company for other customers to use ... a powerful incentive to conserve which would impact the equation on production/consumption.

€ TAXES The EIS fails to analyze the national impact of underwriting the multi-billion dollar Vogtle proposal with federal public tax money. The EIS must compare the estimated amount of tax money for Vogtle with social programs that would have to go unfunded such as education, health care,

poverty and housing.

€ WORKER SAFETY The EIS fails to analyze impacts to construction workers on Vogtle 3 & 4 should a radiological accident occur at Vogtle 1 & 2.

€ FATAL FLAW IN VOGTLE EIS PROCESS This EIS attempts to cover all conceivable environmental impacts from Vogtle 3 & 4 in a brand-new NRC process to give an <sup>3</sup>early site permit<sup>2</sup> that would be good for 20 years. This means that if Southern Co. begins construction on Vogtle in 2027, the EIS we are discussing now is supposed to cover it. It is ridiculous to claim to be able to anticipate local and regional conditions 20 years down the road especially in this era of rampant development. Additional EISes should be performed as part of the actual reactor license review process.
