Mr. C. W. Keller dated Nov. 9, 1966 (DML:CEM, 70-58
SNM-53, Amendment No. 2)

File Copy

Gentlemen:

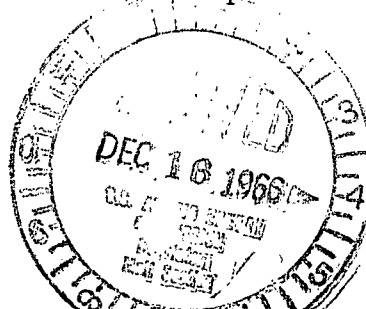

Thank you for your comments in the referenced letter concerning the new location of our storage area. In the new storage location we have considered the proximity of the assembly area and in our best judgement consider the assembly area to be in compliance with subparagraph 70.24(a) of title 10 Code of Federal Regulations, Part 70.

Our conclusion is based on the premise that the storage area does not represent a significant nuclear hazard in the storage of uranium bearing material. Under the complete physical control of Nuclear Materials Management, the area is used solely for storage of material in a manner defined by the guidelines published in TID 7016. The storage array is defined by the Martin Criticality Engineer in compliance with conditions established in Special Nuclear Materials License No. 53. It is also the policy of Nuclear Materials Management to maintain only the minimum possible inventory in storage at any time. Because of these stringent requirements for the storage of uranium bearing materials, the nuclear storage area is not considered a potential site for a nuclear incident. Therefore, the assigned assembly area meets the requirements of subparagraph 70.24(a)(2) of 10CFR70.

The safety of our personnel is always of prime concern. The assignment of a safe assembly area is a matter of judgement. We will continually evaluate our safety procedures on the basis of our workload and changing conditions and keep you informed of any changes which may be required.

Very truly yours,

Martin Company
