RE: License #37-11887-02

Dear Madame:

This is in response to your telephone conversation on January 9, 2008. I have enclosed a map of the building at Three St. Francis Way, Cranberry Twp 16066 where we wish to transport Tc99 Sulfur colloid for injecting sentinel node procedures. The room where the injections will occur has been highlighted. As was stated before this building now adjoins the hospital. Once the patient is injected the residual dose will be taken back to the hospital for disposal. We will not store radioactive materials in this building.

We also wish to add Lance Williams, M.D., and David Wilder, M.D. to our list of authorized users. They both have been authorized for material permitted by 10CFR 35.100 and 10CFR 35.200. Supporting documentation has already been sent that they both have been authorized users before.

Thank you for your time and consideration in this matter. If there are any questions concerning these requests, please contact Betty J. Greer by phone at 412 367-5493, by fax 412 367 6523, or by e-mail at [greerbj@ph.upmc.edu](mailto:greerbj@ph.upmc.edu).

Sincerely,

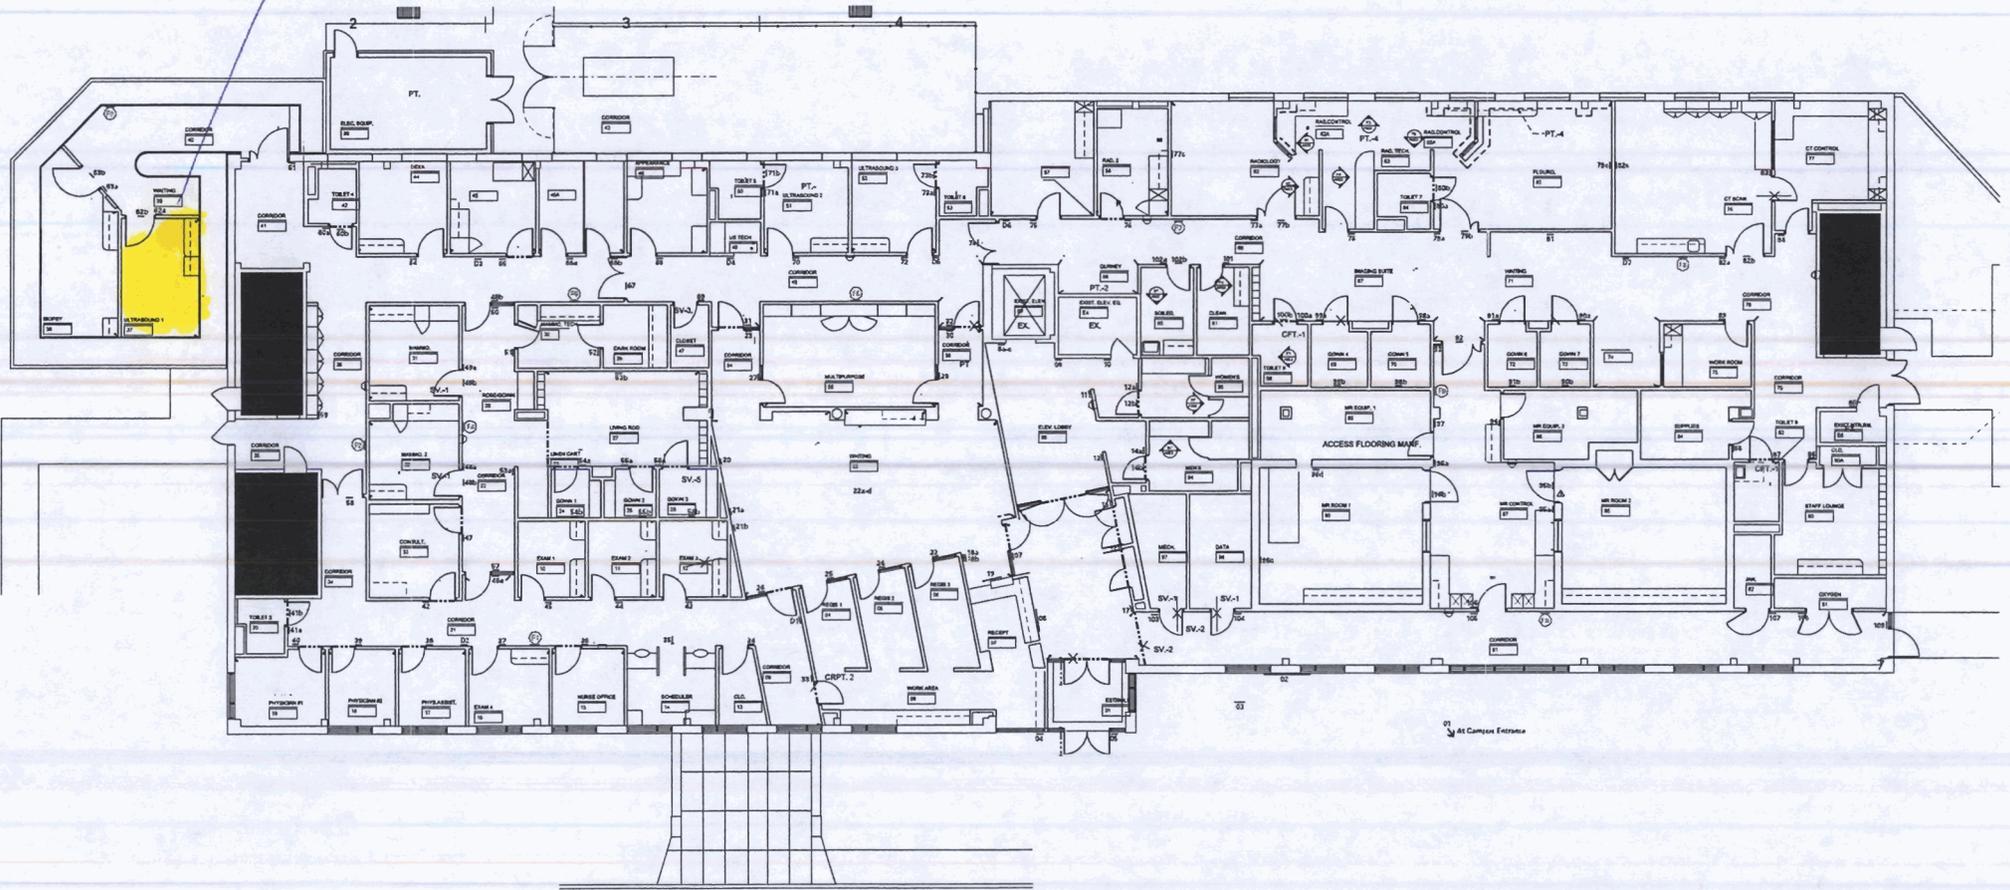

Betty J. Greer on behalf of Donna L. Jasko, Vice President  
Ancillary Services
