Subject: Re: information you requested during Friday's visit

Closure of the AMAG issue is in DRS hands. There has been some discussion on having a special inspection consisting of DRS/NRR individuals but nothing is concrete at this time.

>>> Richard Skokowski 10/28/03 01:07PM >>>
Ann Marie,

You asked me two questions during Friday's visit,

1st - can I support closing the PR11J issue?

2nd - do I need additional help to complete the inspection program/

It depends. I know we can't close the AMAG issue until the TIA is closed, but depending on if the AMAG issue is to be closed this quarter, and how/who closes it will determine the answer to your questions. If the AMAG issue is not closed this quarter (and the plant cooperates), Pete and I should be able to complete the program including the PR11J closure with no additional help

Regardless of whether we will close the AMAG issue this quarter or no, I think we should be planning on how we will close it. Based on the complexity of the technical issue and the potential significance of the management decision making aspects, does the issue warrant a special inspection?

Thanks,

Rick
