Abstract

Extensive irradiation experience of Mitsubishi fuel has shown its reliable performance. This reliable fuel design comes from the verified fuel design methodologies and the firm manufacturing capability. The fuel design, fabrication, the associated analysis methodologies and criteria are applied to the design and manufacture of the US-APWR fuel, consistent with NRC regulations and standards. The US-APWR fuel incorporates the latest design of Mitsubishi fuel, such as higher density pellet of 97%TD, gadolinia-uranium dioxide fuel with gadolinia of up to 10wt%, ZIRLO™* cladding, and the countermeasure design to debris fretting, grid fretting and incomplete control rod insertion.

This document provides the US-APWR fuel system design parameters related to “nuclear design”, “thermal-hydraulic design”, and “transient and accident analysis”.

* ZIRLO™ is the trademark of the Westinghouse Electric Corporation.

1.0 INTRODUCTION

This document provides the US-APWR fuel system design parameters related to "nuclear design", "thermal-hydraulic design", and "transient and accident analysis". The design inherits the reliable features which have been confirmed by the extensive irradiation experience of Mitsubishi fuel. The latest design features are adopted to the US-APWR fuel design, such as higher density pellet of 97%TD, gadolinia-uranium dioxide fuel with gadolinia of up to 10wt%, ZIRLO cladding, and the countermeasure design to debris fretting, grid fretting and incomplete control rod insertion.

2.0 DESIGN PARAMETERS OF THE US-APWR FUEL SYSTEM

The geometries and materials of the US-APWR fuel system including the following fuel system information and associated tolerances, are summarized in Table 2-1 to 2-3 and Figure 2-1 to 2-8.

- Type and metallurgical state of the cladding
- Cladding outside diameter
- Cladding inside diameter
- Cladding inside roughness
- Pellet outside diameter
- Pellet roughness
- Pellet density
- Pellet resintering data
- Pellet length
- Pellet dish dimensions
- Pellet grain size and open porosity
- Burnable absorber content
- Fuel column length
- Overall rod length
- Rod internal void volume
- Fill gas type and pressure
- Sorbed gas composition and content
- Spring and plug dimensions
- Fissile enrichment
- Equivalent hydraulic diameter
- Control rod descriptions, dimensions, and lifetime limits
- Fit of control rod interference with surrounding structure (e.g., guide tube)
- Burnable absorber rod and neutron source rod descriptions and dimensions

**Table 2-1 (1/2) The US-APWR Fuel System Design Parameters
(Fuel Assembly)**

| | Nominal | Tolerances | Note |
|---|--|------------|----------------|
| Fuel Assembly | | | |
| Fuel rods array | 17 x 17 | | |
| Number of fuel rods | 264 | | |
| Number of control rod guide thimbles | 24 | | |
| Number of in-core instrumentation guide tube | 1 | | |
| Number of grid spacers | 11 | | |
| Measure for trapping debris | Anti-debris bottom nozzle with built-in filter | | |
| Material of Structural Parts | | | |
| Top/Bottom nozzle | Type 304 Stainless Steel | | |
| Top nozzle holddown spring | Inconel -718 * | | |
| Top/Bottom grid spacer | Inconel -718 * | | |
| Intermediate grid spacer | Zircaloy-4 | | Recrystallized |
| Control rod guide thimble | Zircaloy-4 | | Recrystallized |
| In-core instrumentation guide tube | Zircaloy-4 | | Recrystallized |
| Sleeve between top nozzle and top grid spacer | Type 304 Stainless Steel | | |
| Sleeve for intermediate grid spacers | Zircaloy-4 | | |

* Inconel 718 is a nickel-chromium-iron Alloy 718.

**Table 2-1 (2/2) The US-APWR Fuel System Design Parameters
(Fuel Assembly)**

| | Nominal | Tolerances | Note |
|--|---------------------|------------|------|
| Geometry | | | |
| Overall fuel assembly length | []* | | |
| Maximum fuel assembly width | 8.426 in.(214.02mm) | | |
| Fuel rod pitch | 0.496 in.(12.6mm) | | |
| Equivalent hydraulic diameter | 0.464 in.(11.78mm) | | |
| Control rod guide thimble outer diameter (upper part) | 0.482 in.(12.24mm) | | |
| Control rod guide thimble inner diameter (upper part) | 0.450 in.(11.43mm) | | |
| Control rod guide thimble outer diameter (lower part) | 0.429 in.(10.9mm) | | |
| Control rod guide thimble inner diameter (lower part) | 0.397 in.(10.08mm) | | |
| In-core instrumentation guide tube outer diameter | 0.482 in.(12.24mm) | | |
| In-core instrumentation guide tube inner diameter | 0.450 in.(11.43mm) | | |

* These values indicate the fuel assembly length except for the clamp height of the top nozzle.

Table 2-2 (1/2) The US-APWR Fuel System Design Parameters (Fuel Rod)

| Fuel Rod | Nominal | Tolerances | Note | |
|------------------------------------|--|------------|--------------|---------------|
| Overall rod length | 181.5 in.(4610mm) | | | |
| Upper plenum length | 6.77 in.(172mm) | | | |
| Lower plenum length | [] | | | |
| Rod internal void volume | [] | | | |
| Fill gas type and pressure | [He gas] | | | |
| Sorbed gas composition and content | - | | | |
| Active fuel length | 165.4 in. (4,200mm) | | | |
| Outer diameter | 0.374 in. (9.50mm) | | | |

3.0 SUMMARY

The fuel system design, fabrication, the associated analysis methods and criteria that have led to high reliability performance of Mitsubishi fuel system are applied to the design and manufacture of US-APWR fuel, consistent with NRC regulations and standards.

This document summarized the US-APWR fuel system design parameters related to "nuclear design", "thermal-hydraulic design", and "transient and accident analysis".
