The U.S. Nuclear Regulatory Commission (NRC or the staff) and representatives of Entergy Nuclear Operations, Inc. (Entergy), held a telephone conference call on February 8, 2008, to obtain clarification on Entergy's response to audit item 63 for the Indian Point Nuclear Generating Unit Nos. 2 and 3, license renewal application (LRA). By letter dated December 18, 2007, Entergy submitted Amendment 1 to the LRA. In response to audit item 63, Entergy stated, "...Inspection methods may include thermography, contact resistance testing, or other appropriate methods including visual based on plant configuration and industry guidance." The staff requested clarification regarding performing visual inspections instead of using thermography. Entergy stated that plant personnel cannot open the enclosure of an energized circuit due to safety concerns. The staff stated that it may be possible to perform thermography through the enclosure. Based on the staff's clarification, Entergy stated that it may revise the response to audit item 63 after conferring with plant staff and if it would not conflict with any site procedures.

Subsequent to this call, the staff identified new information that pertains to how thermography is performed. A teleconference is being scheduled to discuss the information.
