

APPENDIX J

Evacuation Time Estimates for All Evacuation Regions and Scenarios
And
Evacuation Time Graphs for Region R3, for all Scenarios

**APPENDIX J: EVACUATION TIME ESTIMATES FOR
ALL EVACUATION REGIONS AND SCENARIOS**
AND
EVACUATION TIME GRAPHS FOR REGION R3, FOR ALL SCENARIOS

This appendix presents the ETE Results for all 22 Regions and all 12 Scenarios (Tables J-1A through J-1D), and plots of Evacuating Vehicles vs. Elapsed Time leaving the 2-mile and 5-mile circular areas and the entire EPZ for Region R3, for all 12 scenarios. Each plot has points indicating the evacuation times corresponding to the 50th, 90th, and 95th percentiles of evacuated vehicles.

J.1 Guidance on Using ETE Tables

Tables J-1A through J-1D present the ETE values for all 22 Evacuation Regions and all 12 Evacuation Scenarios. They are organized as follows:

| Table | Contents |
|-------|---|
| J-1A | ETE represents the elapsed time required for 50 percent of the population within a Region, to evacuate from that Region. |
| J-1B | ETE represents the elapsed time required for 90 percent of the population within a Region, to evacuate from that Region. |
| J-1C | ETE represents the elapsed time required for 95 percent of the population within a Region, to evacuate from that Region. |
| J-1D | ETE represents the elapsed time required for 100 percent of the population within a Region, to evacuate from that Region. |

The user first determines the percentile of population for which the ETE is sought. The applicable value of ETE within the chosen Table may then be identified using the following procedure:

1. Identify the applicable **Scenario**:

- The Season
 - Summer
 - Winter (also Autumn and Spring)
- The Day of Week
 - Midweek
 - Weekend
- The Time of Day
 - Midday

- Evening
- Weather Condition
 - Good Weather
 - Rain
 - Ice
- Special Event
 - New Plant Construction

While these Scenarios are designed, in aggregate, to represent conditions throughout the year, some further clarification is warranted:

- The conditions of a summer evening (either midweek or weekend) and rain are not explicitly identified in Tables J-1A through J-1D. For these conditions, Scenario (4) applies.
 - The conditions of a winter evening (either midweek or weekend) and rain are not explicitly identified in Tables J-1A through J-1D. For these conditions, Scenarios (7) and (10) for rain apply.
 - The seasons are defined as follows:
 - Summer implies that public schools are *not* in session.
 - Winter, Spring and Autumn imply that public schools *are* in session.
 - Time of Day: Midday implies the time over which most commuters are at work.
2. With the Scenario identified, now identify the **Evacuation Region**:
- Determine the projected azimuth direction of the plume (coincident with the wind direction). This direction is expressed in terms of compass orientation: *towards* N, NNE, NE, ...
 - Determine the distance that the Evacuation Region will extend from the Lee Nuclear Station. The applicable distances and their associated candidate Regions are given below:
 - 2 Miles (Region R01)
 - 5 Miles (Regions R02, and R04 through R10)
 - to EPZ Boundary (Regions R03 and R11 through R22)
 - Enter Table J-2 and identify the applicable group of candidate Regions based on the distance that the selected Region extends from WLS. Select the Evacuation Region identifier in that row from the first column of the Table.
3. Determine the **ETE for the Scenario** identified in Step 1 and the Region identified in Step 2, as follows:
- The columns of Table J-1 are labeled with the Scenario numbers. Identify the proper column in the selected Table using the Scenario number determined in Step 1.
 - Identify the row in this table that provides ETE values for the Region identified in Step 2.

- The unique data cell defined by the column and row so determined contains the desired value of ETE expressed in Hours:Minutes.

Example

It is desired to identify the ETE for the following conditions:

- Sunday, August 10th at 4:00 AM.
- It is raining.
- Wind direction is *to* the northeast (NE).
- Wind speed is such that the distance to be evacuated is judged to be 10 miles (to EPZ boundary).
- The desired ETE is that value needed to evacuate 95 percent of the population from within the impacted Region.

Table J-1C is applicable because the 95th-percentile population is desired. Proceed as follows:

1. Identify the Scenario as summer, weekend, evening and raining. Entering Table J-1C, it is seen that there is no match for these descriptors. However, the clarification given above assigns this combination of circumstances to Scenario 4.
2. Enter Table J-2 and locate the Region described as “5-Mile Ring and Downwind to EPZ Boundary” for wind direction to the NE and read REGION R13 in the first column of that row.
3. Enter Table J-1C to locate the data cell containing the value of ETE for Scenario 4 and Region R13. This data cell is in column (4) and in the row for Region R13; it contains the ETE value of **2:20**.

Table J-1A. Time To Clear The Indicated Area of 50 Percent of the Affected Population

| Scenario: | Summer | | Summer | | Winter | | Winter | | Summer | |
|--------------------|---------------|---------------|----------------|----------------|---------------|---------------|---------------|---------------|---------------|------------------|

Table J-1. Description of Evacuation Regions

| Region | Description | ERPA | | | | | | | | | | | | | |
|--|------------------------|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|-----|-----|-----|
| | | A-0 | A-1 | A-2 | A-3 | B-1 | B-2 | C-1 | C-2 | D-1 | D-2 | E-2 | F-2 | G-2 | H-2 |
| R01 | 2 mile ring | X | | | | | | | | | | | | | |
| R02 | 5-mile ring | X | X | | | X | | X | | | | | | | |
| R03 | Full EPZ | X | X | X | X | X | X | X | X | X | X | X | X | | |
| Evacuate 2 mile ring and 5 miles downwind | | | | | | | | | | | | ERPA | | | |
| Region | Wind Direction Toward: | A-0 | A-1 | A-2 | A-3 | B-1 | B-2 | C-1 | C-2 | D-1 | D-2 | E-2 | F-2 | G-2 | H-2 |
| | | N, NNE, NE | X | X | | | | | | | | | | | |
| R04 | N, NNE, NE | X | X | | | | | | | | | | | | |
| R05 | ENE, E | X | X | | | | | | | | | | | | |
| R06 | ESE | X | | | | | | | | | | | | | |
| R07 | SE, SSE, S | | | | | | | X | | | | | | | |
| R08 | SSW, SW | | | | | | | X | | | | | | | |
| R09 | WSW,W, WNW | | | | | | | X | | | | | | | |
| R10 | NW,NNW | | | | | | | X | | | | | | | |
| Evacuate 5 mile ring and downwind to EPZ boundary | | | | | | | | | | | | ERPA | | | |
| Region | Wind Direction Toward: | A-0 | A-1 | A-2 | A-3 | B-1 | B-2 | C-1 | C-2 | D-1 | D-2 | E-2 | F-2 | G-2 | H-2 |
| | | N | X | X | X | X | X | X | X | X | X | X | | | |
| R11 | N | X | X | X | X | X | X | X | X | X | X | X | | | |
| R12 | NNE | X | X | X | X | X | X | X | X | X | X | X | | | |
| R13 | NE | X | X | X | X | X | X | X | X | X | X | X | X | | |
| R14 | ENE, E | X | X | | | X | X | X | X | X | X | X | | | |
| R15 | ESE | X | X | | | X | X | X | X | X | X | X | X | | |
| R16 | SE | X | X | | | X | X | X | X | X | X | X | X | | |
| R17 | SSE | X | X | | | X | X | X | X | X | X | X | X | | |
| R18 | S | X | X | | | X | X | X | X | X | X | X | X | | |
| R19 | SSW, SW | X | X | | | X | X | X | X | X | X | X | X | | |
| R20 | WSW | X | X | | | X | X | X | X | X | X | X | X | | |
| R21 | W,WNW | X | X | | | X | X | X | X | X | X | X | X | | |
| R22 | NW,NNW | X | X | | | X | X | X | X | X | X | X | X | | |
