OFFICE OF SECRETARY
RULEMAKINGS AND
ADJUDICATIONS STAFF

(24)

To the Secretary,

We strenuously object to EnergySolutions latest example at exploiting loopholes and thwarting local laws in their attempt to expand their business empire at the expense of Utah and all U.S. citizens. It is an affront to this great and beautiful Nation to allow the waste and discards of Italy or any other Nation to be brought here and disposed of. The health of our people and our land are of paramount concern. Why take the risk of contamination or disaster when it need not be? The effects of long term storage are not fully known.

We have a nuclear regulatory framework in place to wisely and decisively address concerns on these matters. Use common sense to keep Utah from becoming the dumping ground of the world. What message would this send to our posterity?

Despite EnergySolutions campaign at enlightening the citizens of Utah of the companies "good" neighbor rhetoric and "friendly" company next door campaign, I cannot believe Utah or the U.S. as a whole would buy such propoganda. We can find better and safer ways of generating income. We don't need low level radioactive waste. We object! These nations do not have their own disposal sites due to opposition. They are in the hopes that companies in the U.S., such as EnergySolutions, will find ways to "convince" the NRC and local governments to take their waste!!
