Dear NRC:

**Re: License No. 29-20974-01**

This letter is being submitted to you to request certain amendments to our current NRC Byproduct Material License. Our current license, Amendment No. 14, dated May 13, 2005, due to expire on June 30, 2012, describes our current program. Please make the following changes to that document:

1. Delete Eric S. Perlman, MD as an authorized user under this license. Dr. Perlman has resigned from the group.
2. Delete Barry D. Julius, MD as an authorized user under this license. Dr. Julius has resigned from the group.
3. Certain changes have been made to the physical plant in our licensed facility at 9 Centre Drive, Jamesburg, New Jersey. Please refer to the enclosed floor plan of the Nuclear Medicine department. The area in yellow currently houses our PET scan equipment and the related hot lab. This area has been modified to increase the length of the scanner room to accommodate a PET/CT unit and to relocate the control area with respect to that room. No changes were made to the hot lab area.

The area outlined in pink will house a Siemens SPECT/CT camera to be acquired and installed on February 11, 2008. The radioactive materials utilized in the operation of this equipment will be stocked in the existing hot lab adjacent to the PET scan area. Additionally, the diagram describes the location of the decay bin that will be used in the department.

The existing gamma camera scan room (not shown in this diagram) and hot lab will remain in place and its decommissioning will be the subject of a future amendment request.
