Dr. Peter Lyons
Commissioner
The U.S. Nuclear Regulatory Commission
Washington, D.C. 20555-0001
U.S.A.

Dear Dr. Lyons,

On behalf of the Japan Atomic Industrial Forum, I am pleased to extend our cordial invitation for the 41st JAIF Annual Conference to be held on April 15 and 16, 2008, in Tokyo Prince Hotel. I would be most grateful if you could deliver a keynote speech in the morning session of April 16.

The Conference, one of the major nuclear conferences around the world, attracts approximately 800 participants from a broad range of nuclear-related sectors from home and abroad. This year's Conference will focus on the sustainable development of the humankind with attention to the global environment including climate change and energy security issues, and given these crucial factors, challenges for nuclear power will be discussed.

The panel session is designed to look at the trend toward the Renaissance of worldwide nuclear power, and explore the ways and means for resolution of issues common to the nations in order to bring true nuclear Renaissance and achieve sustainable development of the nuclear industry. It is our great interest to hear from you about the overview of so-called "Renaissance "of worldwide nuclear power and the future prospect, and requirements for the nuclear industry to be sustainable and expandable, including globally shared fundamentals of nuclear safety. I believe that your informative and insightful keynote speech will make the session most worthwhile.

I look forward to hearing from you.

Sincerely yours,

T. Hattori
