Re: Energy Solutions Import License
1W023

Dear Secretary, NRC:

The matter of safe disposal of radioactive waste is an unresolved problem for our own nuclear industry. Surely, we have no need to add to this problem by importing other countries' nuclear waste. We in Tennessee would be especially impacted as, I understand, much of this voluminous, dangerous waste would be transported through our state and processed here. We do not wish to become a nuclear waste dump for Europe or for other parts of the world.

I urge the Commission not to grant this import license. Also, I should appreciate your informing me about any public hearings on this matter.

Sincerely,
Frances Lamberts
