Beth

I (and OGC) need to find out if VY has updated the CHECWORKS computer program they used to predict and track pipe thinning to account for power uprate conditions. VY stated during the EPU process that the FAC Program (using CHECWORKS) would be updated to account for uprated power conditions. There has been one outage since the EPU was granted during which the updating was to have initiated, that is my understanding.

Could you contact the Flow-Accelerated Corrosion Program owner and verify if they have started updating the program?
