To whom it may concern,

I understand the NRC is contemplating importing nuclear waste from Italy. I know our government is severely mortgaged to outside interests in China and elsewhere; but is this what we have descended to for pocket change?

My friends and I were so relieved when a moratorium was placed on nuclear plant construction. It was the right thing to do. How could we support a power source that clearly would eventually bury us in its toxic garbage?

And now, as it dawns on us that we're being buried in our own household garbage, are we really considering becoming a dumping ground for others' toxic waste? And are we really planning to return to nuclear for our own power needs?

What we need is to find ways to use less power and more sustainable ways of producing it !!! Many of us are already doing this, and if we put all the subsidies available to our presently dominant energy sources toward a goal of sustainable energy, IT WILL BE DONE.

The earth is a living, breathing creature and we must exist in symbiosis with her. Please don't turn our earth into a burial ground for our toxic errors. And please don't build any more nuke plants.

Sincerely,

Jane Chamberlain and Ben E Smith
