Modifications to Nuclear Metals, Inc. Plan dtd 2-20-74 TWX  
Gilman to Crocker

1. Liquid shall be removed from all five pails in manner proposed by Nuclear Metals, Inc., and modified below by AEC, for pail 4.
2. If pail lids are difficult for one individual to remove, pail shall be moved a minimum 12-feet from array to remove lid and liquid. If lids can be removed without disturbing pails, liquid shall be removed without moving pails.
3. Remove liquid from pail by rigid vacuum probe inserted manually just below surface of liquid.
4. All liquid removal activity except lid removal and vacuum probing shall be minimum 12-feet from pails. 2-liter bottles are to be stored on 22" centers; physical barriers are to be used to ensure spacing.
5. Sludge should be carefully laddled into 2 liter bottles with minimum disturbance of sludge in pails.
6. Use of Cd sheet between pails is optional; shall not be used if pail array must be moved to install Cd.
