Subject: More Samples

Dale,

Four soil samples from the Whittaker site in western Pennsylvania should be shipped to you some time this week by the licensee. These samples are achieved samples the licensee has already analyzed. They should be in 500 ml Marinelli beakers. This is the licensee's routine counting geometry. Could you please analyze the samples for natural Th and U by gamma spec. After we see the gamma spec results, we may ask you to do alpha spec. These samples were split as part of a routine inspection. The Docket No. is 40-7455, the License No. is SMA-1018 and the inspection no. is 2005-002. I think it might be good to count the samples as received in the licensee's counting geometry and then process as you would any soil sample so that we could compare the results as received and then after processing (drying, milling, etc.). Any questions, let me know.

Best Regards,
Jim
