Subject: GEH Morris Operation Imminent Threat Response

References: (1) NRC License SNM-2500, Docket 72-01

Dear Mr. Brown,

GE-Hitachi Morris Operation in Morris, IL has evaluated our emergency planning and response actions to address an imminent threat per your request. As we discussed during our meeting on March 19, 2008, our current NRC approved Emergency Plan (EP) and Physical Security Plan (PSP) contain appropriate actions to be taken in response to a postulated imminent security related threat. Responses to a variety of events have been identified and the site emergency support infrastructure, including the notification and mobilization of off-site agencies, has been provided.

These preparations include:

- 1) Trained emergency response personnel and adequate communication equipment to receive an imminent threat notification, activate the site emergency plan, and coordinate, as necessary, with offsite agencies.
- 2) Trained Emergency Coordinators who are able to respond to a range of postulated security compromise threats including event classification, notification, and appropriate emergency response measures.
- 3) Response coordination with off-site local service support and other government agencies.
- 4) Periodic drills and exercises that test the timing and effectiveness of site emergency plans, facilities, equipment and personnel.

Please contact on (815) 942-5590 x174 if you have any questions or would like to discuss this matter further.

Sincerely,

Anthony E. McFadden
Radiation Safety Officer/Security Manager
