Subject: EnergySolutions' license application to import Italian Waste

Dear Commission Members,

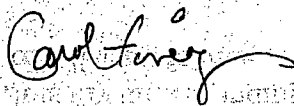

EnergySolutions has received a lot of attention and there has been much press and discussion surrounding the company's request for a license to import radioactive material from Italy for processing and disposal at EnergySolutions' facilities in TN & UT.

It is my understanding the NRC is currently reviewing this license application and that the criteria for issuance of a license is based upon the health and safety impacts of the work to be performed.

As an employee of Duratek and now as an employee of EnergySolutions, I have personally toured EnergySolutions' Clive, UT and Oakridge, TN facilities and am very aware of the safety procedures and safe operating standards by which EnergySolutions manages radioactive materials. I know that these standards are employed company-wide and that every employee is trained and encouraged to operate to the highest possible health and safety standards, both at work and in their personal lives. These standards apply to office workers as well as to those who handle radioactive materials.

As a citizen of Salt Lake City, UT, as an environmentally aware parent and as a worker knowledgeable in the safety rules and regulations the NRC issues and enforces, I support the NRC in reviewing this license application and in granting EnergySolutions the license to properly import and manage the Italian waste.

Sincerely,

Carol Fineagan
