

Attn: Rulemaking

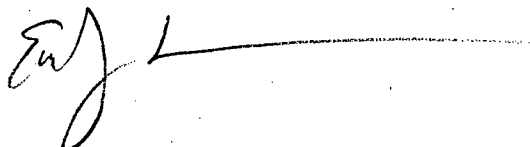

Perhaps before considering bringing foreign nuclear waste to Utah many questions need to be asked.

- What guarantee do we have that the process of transporting the waste and dealing with it is truly safe? Companies can't deliver oil over oceans without 'mishaps' why would nuclear waste be different?
- Why should Utah, who dose not even use nuclear energy, be burdened with the waste products of the world?
- When the United States can barely find places to store her own nuclear waste, why should Utah be asked to be taking it on from other countries?

'Down winders' will attest that Utah has already suffered from past nuclear mistakes. They were promised that things were safe. Did they question that? We may know a lot more about nuclear power today, but it would be a mistake not to question it this time. I don't want nuclear waste coming to my state. Say no to Italy and EnergySolutions, Inc. for me.

Thank you for listening to the public on this issue.

Sincerely,

Emily Kitterman
