Secretary,
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555-0001

DOCKETED
USNRC

April 21, 2008 (3:30pm)

OFFICE OF SECRETARY
RULEMAKINGS AND
ADJUDICATIONS STAFF

Attn: Rulemaking and Adjudication Staff

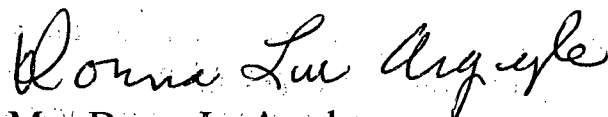

I have read many articles regarding nuclear waste being sent to Utah to the Energy Solutions Depository. This is at the licensing request of this same company. The Energy Solutions company wants to bring nuclear waste from ITALY of all places. They want a license to have 1,600 TONS OF NUCLEAR WASTE SENT TO UTAH!!! This company has also requested nuclear waste be brought in from other areas in the United States.

Utah should NOT become a dumping ground for radioactive waste from the whole world. How dare you even think that we in Utah would want this waste in our State? As a matter of fact, we don't even want the Energy Solutions company here but at this time we are stuck with them.

I don't know what the solution is to the radioactive waste products but I do know that to have it placed in Utah is not the answer. I absolutely object to this proposal and will do all in my power to protect our State from this happening.

Please reconsider this license proposal from Energy Solutions and do not allow this material to be sent to Utah.

Sincerely,

Mrs. Donna Lu Argyle
