Subject: disposal of LLRW

Hello.. I just wanted to make a brief comment on this subject. I am unbiased on the disposition of the subject matter, but my thought is that is EnergySolutions has a specific plan for LLRW, that it should be afforded the opportunity to implement their proposal. Today April 22, 2008... is Earth Day and that got my wheels turning as to what contribution could be offered to better our use of natural resources on the planet. First off, I think we have to STOP burning fossil fuel as it is effecting our atmosphere (This is the biggest problem we as a people face). Rather than viewing the LLRW as a waste product, maybe the NRC should view it as a source of energy. If the material is HOT, then it could certainly be used to produce power. There are huge stockpiles of radioactive material which could be used to produce heat/steam as an alternative to burning coal, etc. I think the NRC should address the "waste" issue as an opportunity for new and exciting possibilities for a new (and apparently unlimited supply) source of energy.

I am in no way suggesting that the LLRW become a permanent storage problem... that would be really bad. But the reality of the situaton is that we have all these radioactive bi-product which ultimately has to be dealt with. It would be in the best interest of the human race to find a real solution to the problem and the best way to attack this problem is to turn LLRW into something that we as a people can use as a renewable source of energy that we can use cheaply to produce heat/steam (electricity).. Im not say specifically how this can be accomplished, but I know that can be done.

Just my \$.02 on the subject.

Regards,
