Amendment No.

33

Neutron Products, Inc. 22301 Mt. Ephraim Road P.O. Box 68 Dickerson, Maryland 20842

Pursuant to Section A.7 of COMAR 26.14.02.01, Condition 13 is hereby amended to add:

A. A gas Proportional Portal Monitor equivalent to the Eberline PCM-1b capable of detecting 2500 dpm at one inch and 5000 dpm at three inches shall be utilized in a location approved by the Department. The monitor shall be used by all personnel who exit the Limited Access Area ("LAA"). They shall remain standing in the sensitive detection zone of the monitor for at least two full minutes. Each person shall expose his/her back, front, right and left sides to the detectors for thirty seconds each. The monitor shall be maintained and used in accordance with the manufacturer's specifications at all times. At a minimum, this monitor shall be inspected by the manufacturer in accordance with the terms of its Service Contract and a copy of the service record shall be submitted to the Center for Radiological Health (CRH). The monitor shall be maintained and used in such a manner as to ensure its ability to accurately detect levels of radioactivity of 2500 dpm on the hands and 5000 dpm on the whole body. The monitor must be fully operational and kept free from contamination at all times unless unforeseeable and unavoidable operational problems arise. The Department must be notified by telephone within one workday in the event that the portal monitor is not operational. A contingency plan describing personnel monitoring procedures for use during downtime must be submitted to the Department for review and approval prior to resuming activities in the LAA. By June 12, 1989 the portal monitor must be located in the newly constructed access and egress area as identified in Attachment 7 to plans submitted by licensee on April 21, 1989.

B. Background radiation levels at the portal monitor shall not exceed 50 micro/R per hour unless otherwise authorized by the Department.

The initial evaluation of items a-j must be submitted to the Department prior to the commencement of any operations specified in Item P. Evaluations under this paragraph may be tailored to the scope of operations allowed under Item P; e.g., the initial evaluation may, but need not, evaluate radiological health/radiation safety under operations involving bare cobalt-60 but such an evaluation must be received and approved by the Department prior to commencement of any actions involving bare cobalt-60. Subsequent evaluations must be submitted to the Department by the last day of each calendar month. Following this six-month period, the Department shall consider reducing the reporting period to a quarterly basis.

- 2. Ensure that the portal monitor is properly installed and maintained;
- 3. Oversee the construction of the portal monitor area as required in order to assure that background radiation levels do not exceed 50 micro/R per hour;
- 4. For a six-month period commencing upon hiring, perform monthly evaluations of the portal monitoring area, the use of the portal monitor by employees, its functioning and the radiation safety training of employees, and submit monthly reports to the Department based upon such evaluations. These reports shall include the review of incidents of radioactive contamination above 22,000 dpm detected on personnel. Following this six-month period, the Department shall consider reducing the reporting period to a quarterly basis;
- 5. Oversee and participate in the design and construction of an enclosure to be installed over the courtyard area so as to provide an effective barrier against the release of radioactivity as described in Item M of this amendment; and
- 6. Conduct a thorough evaluation of the hot cell ventilation system currently employed by the licensee which shall be submitted to the Department. Upon receipt of this evaluation, the Department shall classify deficiencies into two categories according to the severity of their potential harm to the environment:

- a. Deficiencies which must be remédiated prior to reinitiation of hot cell operations under this license; and
- b. Deficiencies which must be corrected within a time period specified in a plan submitted by licensee and approved by the Department.
- The licensee shall implement the Department's directives as defined in accordance with (a) and (b) above.
- D. A full-time trained Health Physics technician or the equivalent in duly committed fractional time technicans shall be retained subject to the approval of the Department concerning their qualifications. The licensee shall maintain a log which documents th work of the Health Physics technician. He shall perform the following functions:
  - 1. During working hours the technician shall ensure the proper use of the portal monitor, hand-held friskers and any other devices employed to detect levels of radioactivity present on persons or items which exit the LAA;
  - 2. Ensure that all persons log in and out upon entering and exiting the LAA;
  - 3. Ensure the proper use of hand-held friskers by all persons who incur levels of contamination detected by the portal monitor;
  - 4. Report immediately to the Radiation Safety Officer any contamination levels above 10,000 dpm which are detected by the portal monitor, or if inoperative, under contingency monitoring. In the event that contamination is detected above 22,000 dpm such incidents must be evaluated by the RSO and must be reported to the Department in monthly reports submitted to the Department by the Health Physics Consultant. Evaluations of such incidents of contamination, shall include the name of the person contaminated and the degree of contamination detected. The Departmer shall be notified within two hours concerning all contaminations above 50,000 dpm which are detected by the portal monitor, or if inoperative, under contingency monitoring. During non-work hours, call (301) 243-8700 and ask the operator for "Radiation Assistance".

- F. Within thirty (30) days of the effective date of this amendment a "clean room" shall be established in which radioactive contamination shall be limited to less than 500 dpm per 100 cm<sup>2</sup> smearable, removable contamination on any surface area. The clean room shall be located immediately inside the entrance door to the LAA and shall provide storage space for all street clothing and equipment which should not be worn or transported into other areas of the LAA.
- G. Any clothing worn outside the LAA shall not be worn in the LAA except in the clean room. Conversely, any clothing worn in other areas of the LAA shall not be worn outside the area. Such clothing may be worn in the clean room if a thorough frisking of a person detects no contamination in excess of 2500 dpm on the hands and 5000 dpm on the whole body.
- H. Within thirty (30) days of the effective date of this amendment, the licensee shall establish and implement a detailed Radiation Safety Training Program as approved by the Department. At a minimum, this Program shall provide, on a quarterly basis,
  training sessions provided by the Health Physics Consultant to all employees who, under any circumstances, may have access to the LAA. Attendance at such training sessions shall be mandatory and documented.
- I. Within thirty (30) days of the effective date of this amendment, the licensee shall submit for approval by the Department a random inspection plan of the LAA and the unrestricted areas to be conducted on a monthly basis and implemented by the Radiation Safety Officer. Once approved by the Department, said plan shall be implemented immediately.
- J. The compaction of radioactive waste prior to storage or disposal is prohibited unless the Department approves of a plan submitted by the licensee for conducting this activity in a safe manner.
- K. By June 30, 1989 the licensee shall submit to the Department for approval a comprehensive plan for disposal of all low level radioactive waste. Upon approval by the Department, this plan shall be implemented.
