### **NRC TO HOLD REGULATORY CONFERENCE WITH NEBRASKA PUBLIC POWER DISTRICT ON COOPER NUCLEAR STATION**

The U.S. Nuclear Regulatory Commission staff will hold a regulatory conference with Nebraska Public Power District officials on May 13 to discuss the significance of an inspection finding at the Cooper nuclear plant. The plant is located near Brownville, Ne.

Conferees will discuss the significance of an inspection finding associated with two procedures that contained steps that would not have worked as written. These emergency procedures are relied on by operators to bring the plant to a safe shutdown condition in the event of a large fire at the plant.

The meeting, which will be open to public observation, will begin at 8 a.m. in the NRC's Region IV offices in Arlington, Texas. The public will have an opportunity to observe and ask questions of NRC staff before the meeting is adjourned. Members of the public can listen to the meeting via a special telephone line by calling 1-800-952-9677, and requesting extension 474.

The NRC evaluates regulatory performance at commercial nuclear power plants with a color coded process which classifies regulatory findings as either green, white, yellow or red, in increasing order of safety significance. The NRC staff has preliminary determined that the significance of the violation is "greater than green," meaning it has a greater than very low safety significance.

No decision on the final significance, the apparent violations or any contemplated enforcement action will be made during the conference. Those decisions will be made by NRC officials at a later date.
