Subject: Submittal of the Final Status Survey Report for
the Hammond Depot, Hammond, Indiana

Dear Ms. Ullrich:

The Defense National Stockpile Center (DNSC) has enclosed for the Nuclear Regulatory Commission's (NRC) evaluation the results of the final status surveys recently completed at the Hammond Depot. The subject report provides the necessary information and data to support the conclusion that soil concentrations and surface activity levels are less than the respective NRC-approved derived concentration guideline levels. A complete, compiled electronic copy is also provided on the enclosed CD for your convenience.

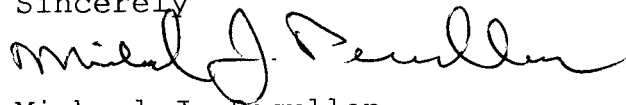

Through submittal of this documentation, DNSC has demonstrated that the post-remedial action condition of the Hammond Depot satisfies the radiological criteria established in 10 CFR 20.1402 for unrestricted use whereby any remaining above background residual radioactivity from licensed activities would result in a TEDE of less than 25 mrem per year to an average member of the critical group.

We would greatly appreciate NRC's review of the documentation and concurrence that the site may be released from License STC-133.

Should you have any questions regarding this letter, please contact me. You may also call Mr. Tim Vitkus, CHP, of the Oak Ridge Institute for Science and Education (ORISE) at (865) 576-5073.

Sincerely

A handwritten signature in black ink that reads "Michael J. Pecullan". The signature is written in a cursive style with a large, prominent initial "M".

Michael J. Pecullan
Radiation Safety Officer
