**Address and Security
For
Ideal Sources Licenses**

We have leased space at the following address

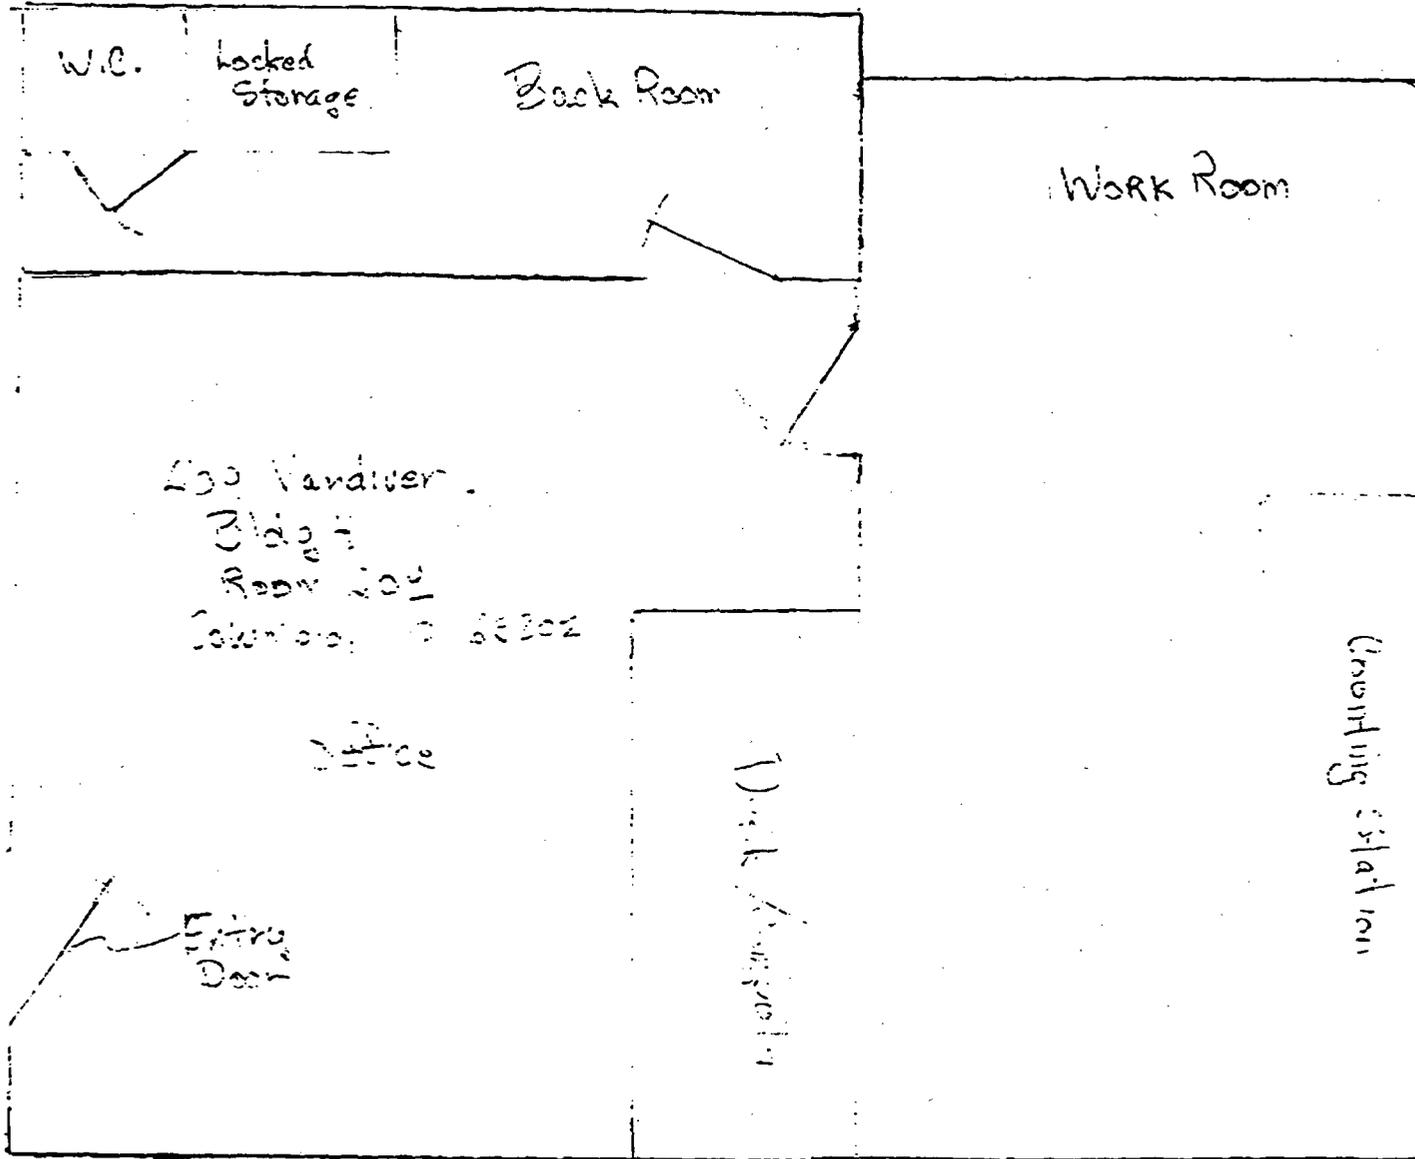

409 Vandiver
Bldg 4, Suite 201
Columbia MO 65202

Security arrangements:

- This is a second floor office, accessible only through the entry stairway.
- The entry door is solid (no windows) and will be equipped with a dead bolt lock.
- The interior doors are also solid, with key entry. Either the work room or the back room can be equipped with dead bolt locks if necessary.
- After work hours, radioactive sources and gemstones will be placed in the (b)(4) Ex ~~3~~ 4
(b)(4)
- Windows in the office and work room are flush, with no easy access from the ground.
- The entry to the building is locked after hours, precluding access to the stairway.

We welcome any suggestions from the NRC that would provide additional security, but recognize that all stones and sources have very low activities, representing minimal risk to the staff or outsiders. In addition, if the release plan proposed in the application for "Importation and Exempt Release" is acceptable, the inventory of stones (and by-product material) will be small, of order 200,000Bq during periods when the Q/A procedure is in progress. At other times, the inventory will be orders of magnitude lower.

Please refer to the attached sketch for the overall layout of the office.
