Subject: Re: FYI - Candidate ISGs

Marissa,

My initial view is that passive reliability could be a fairly compartmentalized issue and included as one element of the PCSA ISG, or issued seperately if necessary. I think that the reliability of a passive components (e.g., fragility of components & applicability of codes & standards) is one important element of the PCSA and engineering issues on the table. This may also be true for a potential HRA ISG?

I would think all elements important to reliability (i.e., design configuration & operations level of detail, reliability models, use of empirical data, fragility analyses, and HRA) should be addressed in at at least a broad level in the PCSA ISG, as necessary.

I would recommend working in parallel for the time being, and see if it makes sense to combine together a month from now. (I think it will be essentially the same ENG & PA staff working on both issues anyways). Of course it also depends on the timeframe we plan to publish positions on each of these issues!

Mike

would an ISG on the reliability of passive components be covered by the PCSA ISG?

>>> Michael Waters 10/4/2005 3:59:42 PM >>>
Attached is a matrix of candidate ISGs that Andy asked me to forward to you. I assume this will be discussed at the Wednesday section chief meeting.

Andy, note I added a line item for seismic, based on preclosure meeting discussion.
